ANNUAL REPORT  
OF THE  
BOARD OF TRUSTEES  
OF THE  
Georgia State Sanitarium,  
For the Year Ending January 1st, 1905.

MILLEDGEVILLE, GA., January 1st, 1905.

*To His Excellency, Joseph M. Terrell, Governor:*

SIR:—As required by Section 1421 of the Code of Georgia the Board of Trustees of the Georgia State Sanitarium has the honor to submit herewith its Sixty-First Annual Report of the conduct and management of same, covering the year beginning January 1st, 1904, and ending January 1st, 1905.

Forming part of this report are the reports to the Board of the Superintendent, Steward, Treasurer, Engineer, and other officers of the Sanitarium, which give in detail the movement of its population, and the receipts and expenditures of all moneys appropriated to its support.

In the beginning of this report the Board desires to make its grateful acknowledgement of the generous support given it by your excellency in the discharge of its responsible duties. The thanks of the Board are likewise tendered the General Assembly for the increased appropriation for its maintenance.

FINANCES.

The expenditures for all purposes were \$350,746.82; daily average of patients 2,880; making a per capita of \$121.79.

The average number of officers and employees was 475, patients 2,880, making a total of 3,355, and making the per capita on both combined \$104.54.

The daily per capita was .3328; for the preceding year, .3012, showing an increase of .0316. This increase is due to increased costs of clothing, salaries and wages, but mainly to unusual expenditures in the incidental account made necessary by the growing number of patients. The laundry has been enlarged, and additional machinery bought and installed therein, one of the unfinished wings of the new building has been made ready for occupancy, and another partly so, covered ways have been built between the kitchen and main dining rooms of the old building so as to protect the patients in bad weather, 60 automatic flushing closets have been installed, all of which is in addition to the usual repairs.

These additions, together with the increase in the ordinary expenses of the Sanitarium, exhausted the surplus left over from last year, as well as the appropriation for the current year, and leaves an overdraft at the Treasurer's hands of \$5,156.56. As against this there are supplies on hand amounting to \$14,848.00, drugs amounting to \$2,273.00 and coal amounting to \$8,000.00. The Board estimates it will be able to take care of this overdraft from the income of the next two months.

Foreseeing the funds at its disposal would not warrant a further increase in the number of patients the Board in October last instructed the Superintendent to decline further patients except as vacancies should occur.

#### POPULATION.

866 patients were received during the year; 753 were discharged, eloped or died; leaving a net increase of 113; and making the population 2,937 patients.

3,690 patients were under treatment during the year; the daily average was 2,880; an increase of 110 over last year. The daily average of the past five years was as follows: 1901, 2,573; 1902, 2,635; 1903, 2,696; 1904, 2,770; 1905, 2,880, which illustrates the steady growth of the Sanitarium.

366 applications for admission are on file to-day.

The percent. of recoveries based on the number of admissions was 40 $\frac{9}{10}$ .

The mortality shows an increase, which is accounted for by the Superintendent in the large number of bed-ridden paralytics and

senile imbeciles among the patients received, whose physical condition did not enable them to withstand the mildest physical malady. It seems a great pity that these classes of patients, entirely harmless as they are, should be brought here at all since there exists not the slightest chance of benefitting them.

The Board regrets to advise a heavy increase in the mortality from tuberculosis, 121 deaths resulting from this cause alone, mainly among the negro patients. The lack of proper facilities for the isolation of patients suffering from this dread disease, and the imperative necessity for so doing, if it is to be controlled and stamped out, impels the Board to again renew its request for an appropriation of \$10,000 to be expended in the erection and equipment of four tubercular wards.

#### ESTIMATED COST 1906 AND 1907.

The average number patients last year was 2,880; an increase of 110 over the preceding year. The average for 1905 is estimated at 2,980; for 1906, 3,080; 1907, 3,180. The average per capita cost for the past ten years is \$115.16, and with this as a basis for its calculation the Board estimates the *minimum* amounts needed for

3080 patients in 1906 to be \$354,672.00.

3180 patients in 1907 to be \$366,208.00.

Your excellency will bear in mind that these are minimum estimates based upon actual experience lower than which it is not safe nor wise to go. The Board believes, however, that the very end for which the Sanitarium was established is largely defeated by the rigid economy necessary to bring its cost to the State within the above limits. It believes that in the zeal for economy sight is lost of the primary purpose of the institution, namely, the cure of insanity, and that it would be derelict in its duty did it fail to utter its word of warning. If the Sanitarium is designed to be merely an asylum, a home for the insane, where they are to be cared for at the least possible expense to the State, well and good. If however, on the other hand, it is designed not only as a home but a hospital as well where everything modern science can devise is brought to bear upon its patients in the effort to restore them to health and reason, then its work assumes a different character. The Board conceives this last to be the true purpose of the Sanitarium, and it asks for an appropriation large enough to accomplish this purpose. A larger medical staff is needed, a school of research is needed; more trained nurses are needed, more means of diver-

sion are needed, which under the present per capita are not possible. Not including the Superintendent and Pathologist who are charged with other important and specific duties, each physician now has an average of 412 patients under his care. It can therefore be readily seen what a physical impossibility it is for them to give each patient in their care the close study they should have. Every possible effort should be made to keep the Sanitarium fully abreast of the times. The physicians should be encouraged to take post graduate courses, and the staff should be large enough to grant such leaves of absence as are desired for this purpose.

If by the expenditure of a few more dollars the State can restore reason to a single one of her stricken citizens the end attained amply justifies the cost.

No institution of this magnitude should ever be without a surplus in its treasury with which to meet any emergency which may arise, and the appropriations to its support should be large enough to allow for the accumulation of one.

In the judgment of the Board a daily per capita of 35 cents should be allowed. Figured upon this basis, 3,080 patients in 1906 will require \$394,548.00. 3,180 patients in 1907 will require \$407,358.00, and the Board respectfully asks for appropriations in these amounts.

#### CONVICT INSANE.

The convict insane now in the Sanitarium number 9. By act of the last General Assembly the care of this class of patients was transferred to the Prison Commission who thus far have failed to relieve the Sanitarium of them, and in consequence of which they are still confined here to the hurt and detriment of the innocent insane. In view of the action of the General Assembly the Board has declined to receive more patients of this class.

#### SCHOOL FOR DEFECTIVES.

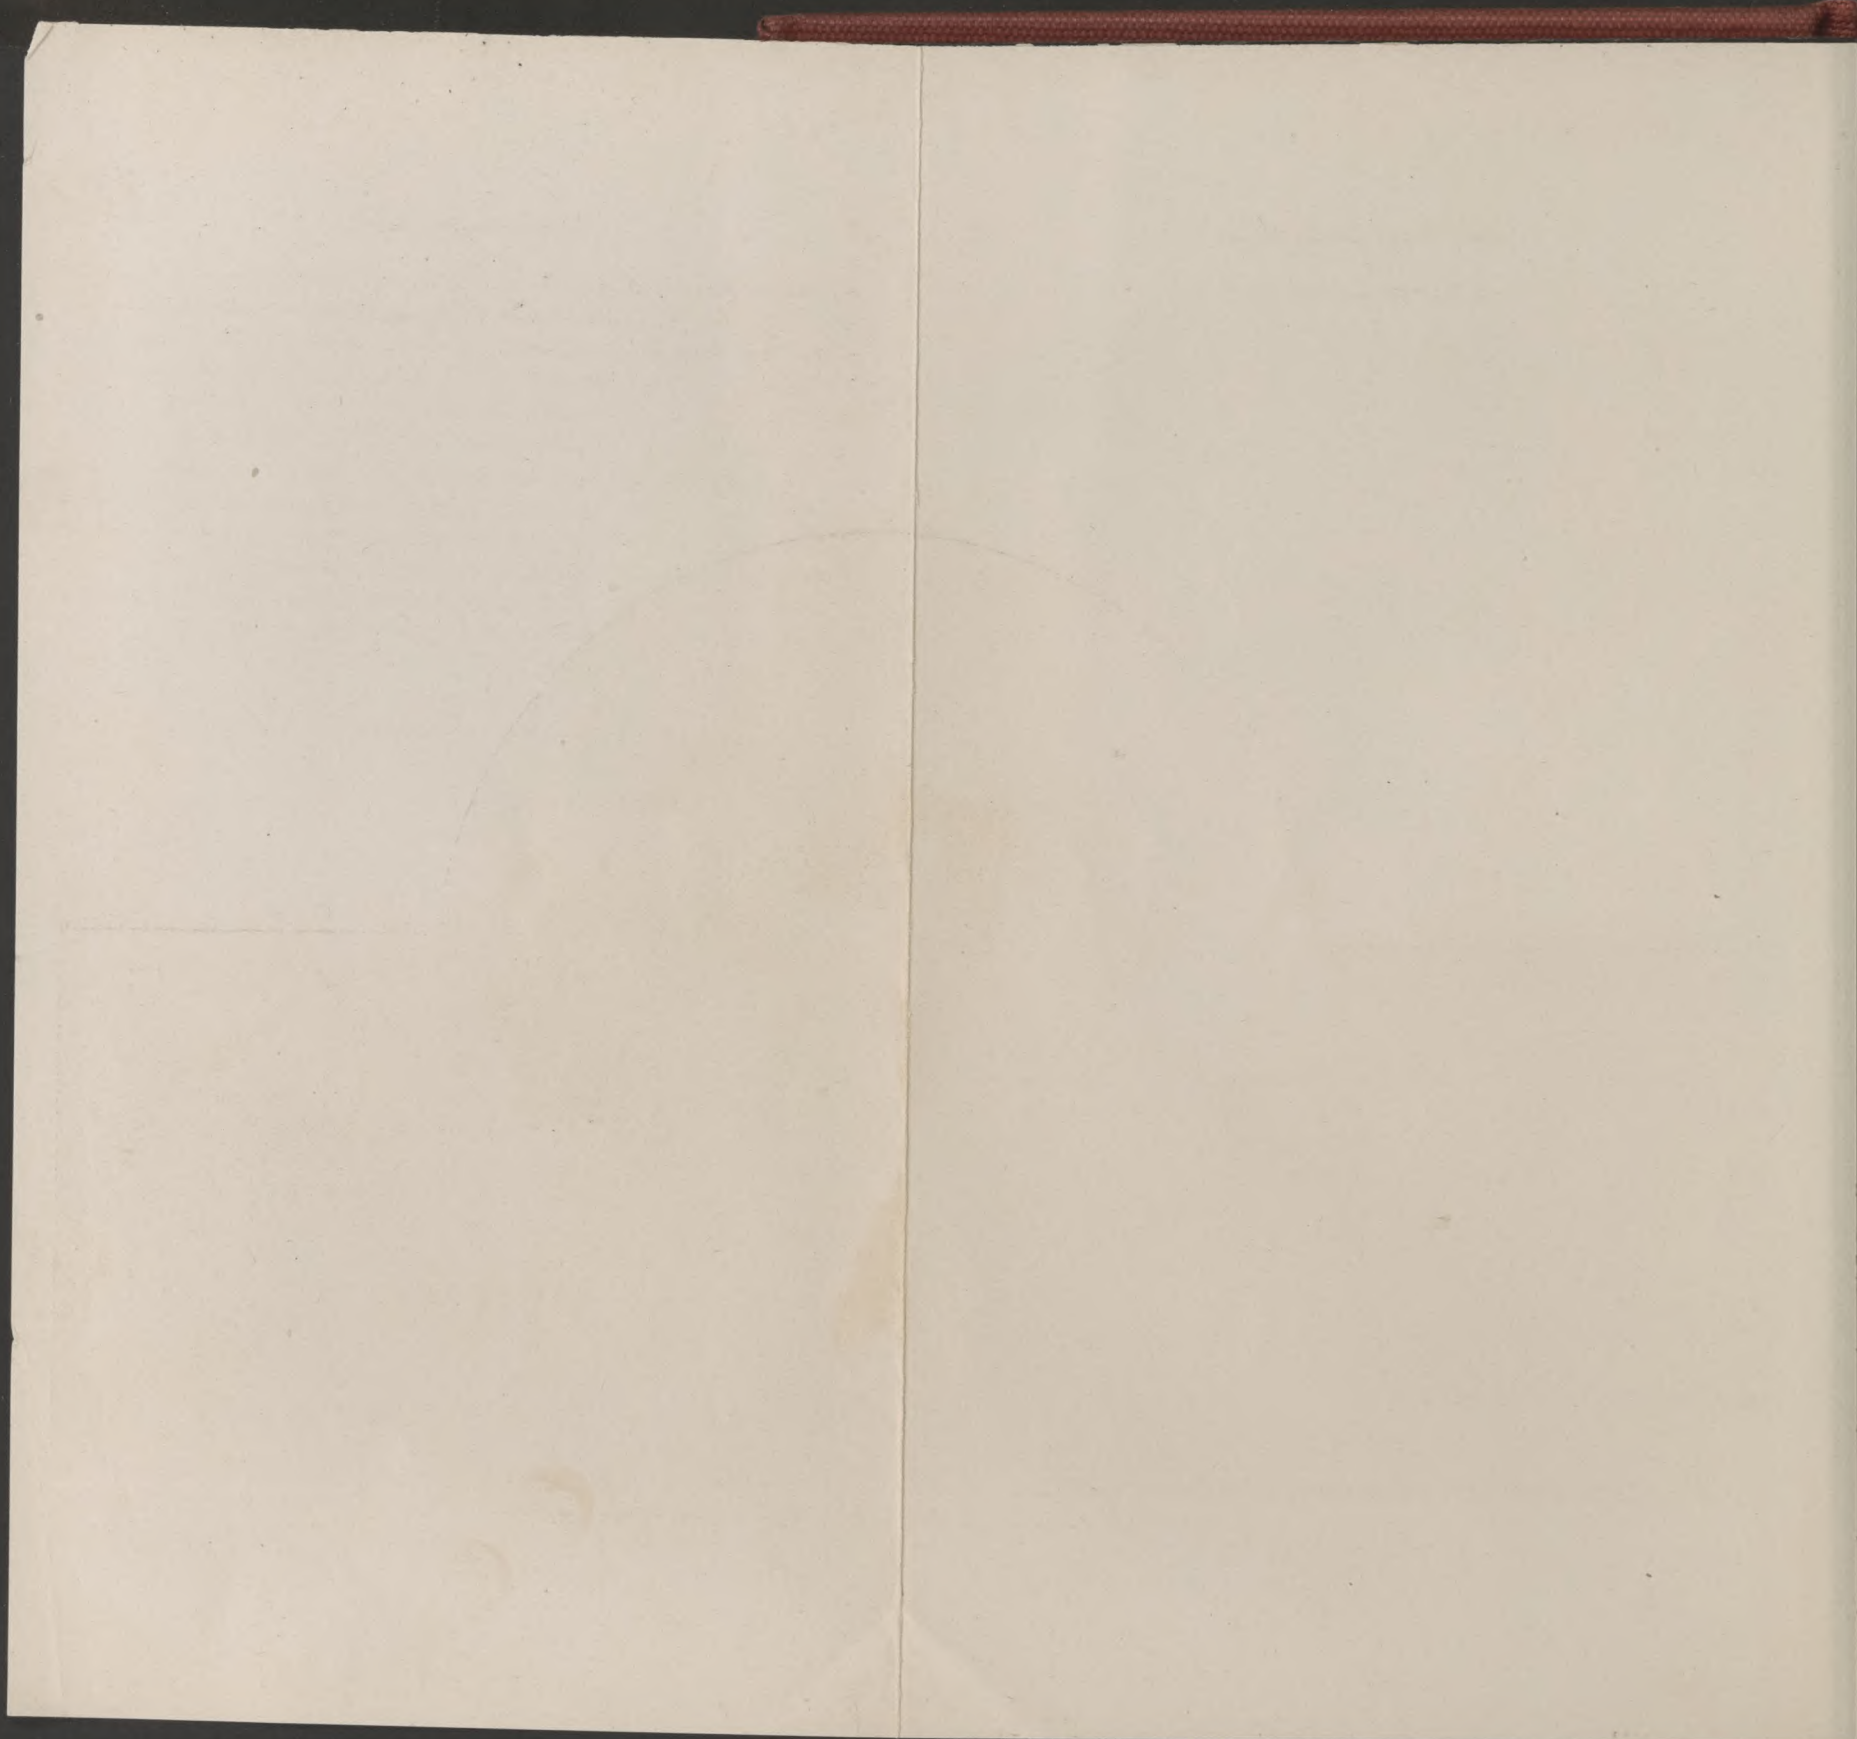

Among the patients in the Sanitarium are 52 feeble minded or defective children under 16 years of age. It is possible by means of careful training to educate a few of these and fit them in some measure for self support. Other states have established training schools for this unfortunate class in the effort to give them their one and only chance, and the Board sincerely hopes the day is not far distant when Georgia will follow their lead.

ONE OF TWIN BUILDINGS NOW IN PROCESS OF ERECTION.

## WATER SUPPLY.

The water supply of the Sanitarium calls for prompt action by the General Assembly. It has two sources of supply, the main one being from Camp Creek about one mile distant, and the other from an artesian well on the ground. The supply from the latter furnished ample drinking water, but no more. The supply for all other purposes is drawn from Camp Creek. At the time the pumping station was erected at the last named place in 1876 the supply was ample, but in late years the clearing up of the lands on either side of the creek, and the consequent filling of its bed with sand has caused a gradual diminution of the supply. During the severe drouth last summer the flow ceased for several weeks, the bed next to the pumping station being dry. Water is drawn from the stream by perforated intake pipes laid in its bed which discharge into a nearby well, from which it is pumped to the Sanitarium. Because of this the supply did not cease altogether, but it was so low that the pump could only be run a short while each day. For six weeks it became necessary to cut the water off from the wards early each morning only turning it on again for one hour late in the afternoon. The supply was too low to properly flush the closets and sewers, and the dangerous sanitary condition of the wards can be surmised from this. To add to the danger the water was discovered to be polluted, as will be seen from the Pathologist's admirable report.

These dangers, grave enough in themselves, were slight compared with the fire risk to which the Sanitarium was exposed. If at this time a fire of any magnitude should have occurred its possible results are appalling to contemplate.

In view of these facts and knowing the creek supply must necessarily continue to grow less the Board has caused diligent inquiry to be made for other sources of supply. After giving them due consideration it has decided the best and most permanent supply is to be had from the Oconee River, and has caused the Engineer to make a careful survey and an estimate as to the cost of reaching same, and this estimate follows:

MILLEDGEVILLE, GA., April 18th, 1905.

*To the Honorable Board of Trustees, Georgia State Sanitarium,  
Milledgeville, Ga.:*

GENTLEMEN:—Supplementing my report of January 14th, 1905, on the feasibility and the cost of obtaining a supply of water for

this institution from the Oconee River, I beg to hand you the following detailed estimate of the cost of a complete pumping and filtering plant located at the most desirable point, i. e., just above the mouth of Tobler Creek. This location is 20,800 feet distant from the institution.

Pumping machinery for handling the raw water.....	\$ 3,186 80
Pumping machinery for forcing the filtered water to Sanitarium ....	3,919 00
1 new boiler and expense removal present plant.....	817 00
Pipe and fittings about boiler and pump including intake pipe .....	2,543 70
Pipes and valves about clear water and coagulating basins	1,411 00
Grading and excavation about pumping station.....	1,641 20
Brick work.....	4,609 50
Woodwork .....	978 70
Coagulating and settling basins.....	1,524 00
Clear water basin .....	762 00
Filters complete.....	5,566 00
12" pipe line.....	32,285 00
House for Engineer .....	800 00
Telephone.....	300 00

Respectfully submitted,

T. H. DESAUSURE, Engineer.

The estimated cost of the Engineer, exclusive of the cost of site and the right of way for the mains from station to Sanitarium, is \$60,343.90. Including the items just mentioned the Board estimates the total amount required will be not less than \$62,500.00.

For this purpose, and to guard against any contingency which may arise, the Board asks for an appropriation of \$75,000.00, or so much thereof as may be required, such appropriation to be made immediately available.

#### IN CONCLUSION.

In closing this report the Board desires to place on record its appreciation of the faithful work of Dr. T. O. Powell, Superintendent, and his corps of assistants. It is gratifying to note the harmony prevailing, and to know that every member of the corps is enlisted heart and soul in his work.

The high rank of the Sanitarium among its sister institutions elsewhere attests the distinguished ability characterizing the admin-

istration of Dr. Powell, while the affectionate regard in which he is held by our entire people may be accepted as additional evidence of his fidelity to his trust.

Respectfully submitted,

JOEL BRANHAM, President,  
THOS. G. LAWSON, Vice-President,  
RICHARD JOHNSON, Secretary,  
JNO. F. BRANTLEY,  
JAMES B. BAIRD, M. D.,  
CHAS. J. MONTGOMERY, M. D.,  
THOS. M. SWIFT,  
JNO. L. CULVER,  
W. F. BRUNNER, M. D.,  
HENRY BANKS.

## Report of Superintendent

**For the Year Beginning January 1st, 1904, and Ending  
January 1st, 1905.**

GEORGIA STATE SANITARIUM, January 1st, 1905.

*To the Honorable Board of Trustees, Georgia State Sanitarium:*

GENTLEMEN:—In compliance with the law I herewith respectfully submit for your consideration the Sixty-First Annual Report of this Institution, giving a detailed account of its operation, conduct and management in every particular for the past twelve months, embracing a period from January 1st, 1904, to January 1st, 1905, together with the reports of the Steward, Treasurer and other officers, and such suggestions as I may deem advisable for the welfare of the institution. Also giving, I hope, a full and satisfactory detailed statistical account of the movement both of the white and colored population during the past twelve months, and an itemized statement of all expenditures, showing the amount of provisions, clothing, bedding, etc., purchased, from whom, and price paid.

On January 1st, 1904, there were white patients on hand, 1,957, and colored 867. There have been received since 559 whites and 307 colored, making a total reception of 866.

There have been discharged, removed, eloped and died, 753, leaving in the institution January 1st, 1905, 2,937, of whom there are 116 whites and 25 colored on furlough, not discharged.

The average number of patients under treatment during the year was 2,880, while the total number receiving treatment was 3,690.

It will be seen that the average number receiving treatment was 110 more than last year. We have 113 more patients on hand than at the close of last year.

The following tables will give in detail the movement of the white and colored population:

## STATEMENT—WHITE.

In relation to the number of white patients during the past year, or from January 1st, 1904, to January 1st, 1905.

There were patients on hand January 1st, 1904.....	1,957
White Male Lunatics.....	773
White Male Epileptics.....	116
White Male Idiots.....	40
	<hr/> 929
White Female Lunatics.....	934
White Female Epileptics.....	66
White Female Idiots.....	28
	<hr/> 1,028
	<hr/> 1,957
There have been received during the year:	
White Males.....	293
White Females.....	266
	<hr/> 559
Total number under treatment.....	2,516
Of whom there have been	
Discharged, restored.....	239
" improved.....	7
" removed.....	7
" eloped.....	4
	<hr/> 257
There have died,	
White Males.....	107
White Females.....	100
	<hr/> 207
	<hr/> 464
Leaving on hand January 1st, 1905.....	2,052

## CLASSIFICATION OF THE WHITES.

White Male Lunatics.....	823
White Male Epileptics.....	119
White Male Idiots.....	47
	<hr/> 989
White Female Lunatics.....	949
White Female Epileptics.....	77
White Female Idiots.....	37
	<hr/> 1,063
	<hr/> 2,052

Of the white males who have died there were of pneumonia 1, marasmus 3, chronic enteritis 13, acute enteritis 5, acute dysentery 9, epilepsy 11, exhaustion of chronic mania 2, decubitus 1, tuberculosis 14, chronic nephritis 1, scalded 1, asphyxia 1, organic brain disease 3, tubercular enteritis 1, paresis 2, chronic exhaustion 1; exhaustion of acute mania 1, nervous exhaustion 1, mastoiditis 1, cerebral hemorrhage 9, erysipelas 1, gastro-enteritis 1, typhoid-ma-

larial fever 1, organic heart disease 3, pyaemia 1, typhoid fever 5, cerebral tumor 1, valvular heart disease 3, emphysema 1, inanition 1, senile exhaustion 5, acute bronchitis 1, acute indigestion 1, and exhaustion of terminal dementia 1. Total 107.

Of the white females, cerebral hemorrhage 7, pulmonary tuberculosis 10, chronic nephritis 2, pneumonia 1, general tuberculosis 9, acute gastro-enteritis 1, exhaustion 2, organic heart disease 9, organic brain disease 7, maniacal exhaustion 3, chronic enteritis 5, chronic anemia 2, epilepsy 8, marasmus 2, angina pectoris 1, meningitis 1, typhoid fever 2, asthenia 2, senile exhaustion 4, tubercular enteritis 1, septic peritonitis 1, appendicitis 3, carcinoma of breast 1, senility 4, uraemia 1, suicide 1, uterine cancer 1, ulcerative enteritis 4, aortic incompetency 1, acute enteritis 1, influenza 1, pyaemia 1, and septicaemia 1. Total 100.

#### STATEMENT—COLORED.

In relation to the number of colored patients received during the past year, or from January 1st, 1904, to January 1st, 1905.

There were patients on hand January 1st, 1904.....		867
Colored Male Lunatics.....	389	
Colored Male Epileptics.....	48	
Colored Male Idiots.....	11	
	<hr/>	430
Colored Female Lunatics .....	407	
Colored Male Epileptics.....	21	
Colored Female Idiots .....	9	
	<hr/>	437
		<hr/> 867

There have been received during the year:

Colored Male .....	143	
Colored Females .....	164	<hr/> 307

Total number under treatment..... 1,174

Of whom there have been

Discharged, restored.....	83	
" improved .....	2	
" removed .....	1	
" eloped .....	12	
	<hr/>	98

There have died

Colored Males.....	88	
Colored Females.....	103	
	<hr/>	191
		<hr/> 289

January 1st, 1905, leaving in the Institution ..... 885

## CLASSIFICATION OF THE COLORED.

Colored Male Lunatics.....	379	
Colored Male Epileptics.....	51	
Colored Male Idiots.....	15	
	<hr/>	445
Colored Female Lunatics .....	399	
Colored Female Epileptics.....	29	
Colored Female Idiots.....	12	
	<hr/>	440
		<hr/> 885

Of the colored males who have died there were of epilepsy 7, organic heart disease 1, cerebral softening 2, status epilepticus 3, senile dementia 5, tuberculosis 29, chronic Bright's disease 4, organic brain disease 4, pneumonia 3, maniacal exhaustion 1, cerebral hemorrhage 2, exhaustion 3, septicaemia 2, paresis 4, uraemia 2, chronic enteritis 3, senility 6, cellulitis 1, meningitis 1, inanition 3, artero-sclerosis 2. Total 88.

Of the colored females, tuberculosis 56, meningitis 2, pneumonia 2, exhaustion 2, chronic interstitial nephritis 5, epilepsy 2, pernicious anemia 1, chronic enteritis 3, organic brain disease 6, maniacal exhaustion 1, cerebral hemorrhage 2, organic heart disease 2, fatty degeneration of heart 2, acute enteritis 2, paresis 1, marasmus 1, abscess of lung 1, senility 3, aneurism of left cerebral artery 1, peritonitis 1, paranchymatous nephritis 1, dilatation of stomach 1, endocarditis 1, septicaemia 1, acute gastritis 1, decubitus 1, and carcinoma of stomach 1. Total 103.

## HEALTH.

I regret to have to report that we have had more sickness in the various departments of the Sanitarium for the past twelve months than usual. The per cent. of deaths is also larger than last year.

That, perhaps, is due to a large extent to the class received during the year—broken down mentally and physically, and I might say of the 3,690 that were under treatment in the Sanitarium from January 1st, 1904, to January 1st, 1905, quite a number were suffering from incurable diseases such as advanced tuberculosis, senile dementia, general paresis and epilepsy of long standing—totally unable to resist the slightest attack of any physical malady. Of the number that died there were 91 between the ages of 60 and 90. The admission of senile imbeciles and bed-ridden paralytics continues to increase although we urge the relatives, friends, and the Ordinaries of the counties, the necessity of keeping this class at home, as it is impossible for us to benefit them by treatment in the Sanitarium, and that it is only a question of a little time before they pass away, but still they are sent. The reception of such cases of course increase the mortality annually.

We have had some typhoid fever in the institution commencing in June and lasting until December; a number of cases in the new buildings, a few in the white female department, and a few in the colored department. We know not what this was due to unless to polluted water from Camp Creek where we get our principal supply of water. Every hygienic measure was used compatible with the means at our command to prevent the spread of the disease.

I give below the analysis of the water made by our Pathologist, Dr. Pumpelly :

"A report of the bacteriological and chemical examination made of the creek water was submitted on November 10th, 1904. The

examination brought to light much indicating pollution. *Chemically* it was found to possess a very high oxygen-consuming power, and to contain an excessive amount of nitrogen compounds, and a well marked trace of soluble phosphates. *Bacteriological*: Two organisms were isolated corresponding in morphological and cultural characteristics with those of the class considered as positive indices of pollution; one was a true colon. The bacillus thyphosus could not be found.

"The other waters examined were found not to be polluted."

### RECOVERIES.

This calculation is based upon the number of patients admitted in the Sanitarium from January 1st, 1904, to January 1st, 1905. The per cent. of recoveries was 40 $\frac{1}{10}$ %. When we consider that of the 866 patients received during the year 57 $\frac{8}{10}$ % per cent. were regarded as chronic and incurable cases the percentage of recoveries I consider very satisfactory indeed. Such receptions add greatly to the large number of chronic and incurable cases that has been constantly increasing in the Sanitarium for the past 50 years. Of course the fatality list is increased in proportion to the number of old and feeble people in the institution. The cases that justify hope of recovery are the recent ones where the psychological manifestations of insanity have not existed more than from one to six or eight months.

### SUGGESTIONS.

I think it is of very great importance that a careful consideration should be given to securing an abundant supply of pure filtered water. Our main supply of water for the Sanitarium, as you know, is obtained from Camp Creek about a mile from the institution. It seems that for several years past, from May until October, this supply has become gradually less necessitating the running of the pump night and day, taking all of the water coming to the pumping station, and you remember the alarming condition that we were in from May of this year until some time in October; indeed, about the 1st of October there was no water within 150 yards of the pumping station. The bed of the creek was perfectly dry. Our condition at that time rendered us totally unable to combat a fire of any magnitude. The ordeal for several months that we passed through was very trying, knowing that should any fire occur we were comparatively helpless, that the lives of many of the

patients might be lost, and much of this large property destroyed. And it should be remembered there are many patients that would have to be taken out by force, and with the smoke and excitement that would necessarily follow, it would be marvelous if we should get all out with safety, especially if a fire should occur at night. While it is true that an accident might happen with an abundant supply of water, is it not also true that every precautionary measure should be taken to check a fire, and to have pure unpolluted water; for it is almost impossible to prevent some of the patients drinking from the faucets. Nor did we have, for a period of six weeks, a sufficient supply of water for sanitary purposes after pumping the entire flow of the creek. We were under the necessity for a while of shutting off the water after pumping about four hours in the morning, and turning it on again in the afternoon from 5 to 6 o'clock—just one hour. You can readily see what our sanitary condition must have been under such circumstances.

I would also suggest that if we cannot get the open cottages for isolating the tubercular cases, that tents be provided for them with the necessary enclosure so as to prevent the escape of those who might be disposed to wander off, and for their safety and protection in other ways. This we might first start with the negroes as tuberculosis is so prevalent and fatal with them. Of 28 cases that were thought to be suffering with complicated troubles, on post mortem investigation 14 were found to be tubercular. It has been our custom not to hold necropsy on bodies where diagnosis had been made of uncomplicated pulmonary tuberculosis; therefore, the per cent. found from post mortem investigation does not give the number dying from tubercular trouble.

#### STATE CARE OF THE INSANE.

A few words now in regard to the relation and obligation of the State to the care of her insane, which care on the part of the State is absolutely necessary and unavoidable on account of the character of the disease from which they are suffering. For instance, persons suffering from physical diseases a large majority are treated at home with all the comforts of home and loved ones to care for them. Their mental condition is such that they can fully appreciate every effort of their friends and relatives for their welfare, and give their hearty co-operation in treatment; hence, they can be treated successfully and with safety at home, but, alas, with brain diseases it is alto-

gether different. With a large per cent. of the cases it is absolutely necessary to remove them from home, relatives and friends for their safety and that of others, and society also demands it. Home surroundings, and friends and relatives are frequently prejudicial to the welfare and restoration of the insane. Many of the insane are dominated by illusions, hallucinations and delusions, and they are not capable of giving their co-operation in treatment or care. Sometimes they are destructive, homicidal and suicidal, and disposed to commit acts of violence towards those nearest and dearest to them; hence, the burden of their care must rest upon the State. It should not, however, be regarded as a burden, but a divine privilege. All humanitarians will clearly see that there is no class of the afflicted that appeal so pathetically for a liberal and unstinted provision for their care in every way possible. There is no state care that can be compared to that of the insane, and it should be remembered that there is not one of us that can tell when we or some of our dear ones may be thus afflicted. I think all hospitals as large as this should be able to carry a surplus to meet any unforeseen emergency that might and is liable to occur at any time that would demand immediate attention without any delay whatever to prevent suffering, such as the giving way of machinery in any of the various departments, the failure of water supply, a sudden and unexpected advance in the price of provisions, bedding, clothing, etc; also to meet promptly any hygienic emergency that might arise. The reception of a certain class of patients, owing to their mental condition, demands frequently more nurses, not only for their safety but for the safety of others, and also the Sanitarium. In my judgment in a hospital as large as this, these things should be wisely and carefully considered.

#### PATHOLOGICAL LABORATORY.

Dr. W. C. Pumpelly, our Pathologist, continues his work with commendable zeal and fidelity. His report will show a full and complete account of the work, and character of it, done in that department from January 1st, 1904, to January 1st, 1905.

#### EMPLOYMENT AND AMUSEMENTS.

We have endeavored in every way possible to give congenial employment to all that could be encouraged when their mental and physical condition would justify it, which invariably proved to be beneficial to the patients.

Dr. Whitaker, the First Assistant Physician, still has charge of the weekly entertainments, and he leaves nothing undone that he can do to add to their pleasure and diversion. These entertainments are looked forward to with great pleasure by many of the patients, and to say nothing of the beneficial influence mentally, it makes a hospital life much less monotonous.

#### IMPROVEMENTS AND REPAIRS.

There has been a large amount of work done in the various departments of the institution during the past year. Some of the buildings have been occupied since 1842 and 1846. Of course these buildings needed repairs from garret to cellar. Even the new buildings, from the destructive tendencies of patients, need constant repair, and the repairs of furniture, etc., are necessarily very large.

The report of the Engineer, Capt. DeSaussure, will give a detailed account of the work done in this department.

#### FINANCES.

Our faithful and efficient Steward, with the Executive Committee, continues to manage the affairs of the institution with the strictest economy consistent with the welfare of the patients, and the preservation of this large property.

By reference to his report you will see a full and detailed account of the financial management of the affairs of the institution during the past twelve months.

While the per capita cost per day of  $.33\frac{7}{8}$  is a little more than last year, the report of the Steward will show satisfactory reasons for the same.

#### ASSISTANT STEWARD.

You will see by reference to the report of the Assistant Steward that the clear profits above all expenses of the farm, dairies, hogs, etc., amount to \$18,147.28. We regard this as a very good showing indeed when we consider the continued drouth during the summer.

#### STOREKEEPER.

You will see from the report of the Storekeeper, Mr. Hunter, a full and detailed account of the work done in that department from January 1st, 1904, to January 1st, 1905.

## BOOK-KEEPER.

By reference to the Book-keeper's report you will see the full amount of work done in that department from June 11th, 1904, the date this system was adopted, up to January 1st, 1905.

## MATRON.

The report of our excellent Matron will give you an idea of the large amount of work done in that department during the past twelve months; the amount of fruit canned, preserves, pickles, etc., put up during the year, and we should not lose sight of the fact that all clothing and repairing for the patients of the Sanitarium, with but few exceptions, is done in this department by patients with the assistance of the attendants.

## PHARMACIST.

The Pharmacist has given general satisfaction, and his report will show the number of prescriptions filled, the amount of drugs purchased, and also the amount on hand.

## DENTIST.

The report of the Dentist will speak for itself so far as the work and character of the work done in his department.

## TRAINING SCHOOL FOR NURSES.

Lectures are delivered weekly by the staff of Assistant Physicians and the Superintendent of Nurses. This school adds greatly to the efficiency of the nurses' services. The Assistant Physicians have also formed a medical society which is to meet twice each month. At these meetings papers will be read and discussed, cases reported, and patients presented. Besides the regular meeting each physician is expected to hold clinics as opportunity presents. These clinics are to be psychological, medical and surgical.

## ACKNOWLEDGEMENTS

It is with pleasure that I express my appreciation to the many friends throughout the State for books, magazines, papers and periodicals donated to the Sanitarium library for the use of the patients.

The report of the Librarian will give a full statement as to the number of periodicals, books and papers received during the year; also the number of books, etc., on hand.

#### OFFICERS, EMPLOYEES AND ATTENDANTS.

With the many duties connected with the management of an institution of such magnitude as the State Sanitarium it could not be successfully managed without the intelligent co-operation of the heads of the various departments. I am under renewed obligations to the Medical Staff—indeed to all the officers for a faithful and intelligent co operation, harmony and concord of action for the welfare of the institution. Also to Miss Cross, the Superintendent of Nurses, the Supervisors, attendants and employees who have faithfully performed the duties devolved upon them.

#### RELIGIOUS SERVICES.

Religious services have been conducted as usual on Thursday and Sunday afternoons of each week when the weather and circumstances would admit during the year by our beloved chaplain, Rev. D. W. Brannen. He has buried the dead, and visited the sick when advisable.

#### TRUSTEES.

In conclusion, it is not only a pleasure but I regard it as a privilege to acknowledge my appreciation for the universal kindness and courtesy extended to me by each member of your honorable body, and for the untiring interest you have taken in the conduct and management of the Sanitarium.

With a firm belief in the watchful care of a wise and merciful providence we begin the duties of another year.

Very respectfully submitted,

T. O. POWELL, Superintendent.

## Report of Pathologist.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 1st, 1905.

*Dr. T. O. Powell, Superintendent Georgia State Sanitarium:*

SIR:— have the honor to present herewith a report of the work done in the Pathological department during the past year.

In tables numbers one and two will be found the more important data derived from a post-mortem study of twenty eight bodies.

The amount of clinical work during the year has been unusually large and includes a chemical and bacteriological investigation of the water supply and a bacteriological study of ten disinfectants.

Several weeks ago we undertook the use of tuberculin for diagnostic purposes, our work in this line is as yet, however, only in the experimental stage.

I am profoundly grateful to you for your encouragement and assistance and I wish also to thank the members of the staff for the assistance which they have rendered me, I am,

Very respectfully,

WM. C. PUMPELLY, M. D., Pathologist.

TABLE No. 1.

### SYNOPSIS OF AUTOPSIES.

Case No.	Race	Sex	Age	Mental Disease	Duration	Hours after Death	ANATOMICAL DIAGNOSIS
265	C	M	35	Epilepsy.	2 yrs.	11	Pulmonary tuberculosis.

288	C	F	44	Melancholia, chronic.	1110	Nothing abnormal noted.
289	C	M	55	Mania, chronic.	1050	Atrophy of the convolutions.
290	C	F	45	Dementia, terminal.	1040	Cerebral effusion. Thickened dura.
291	C	M	37	Epilepsy.	1220	Congestive hyperemia. Thickened dura. Microscopical examination: Some pigmentation of motor cells.
292	C	F	70	Dementia, terminal.	1100	Purulent meningitis.

## CARDIOVASCULAR DISEASE.

In seventeen cases the arteries were found diseased. Atheromatous patches in the arch of the aorta and in the vessels at the base of the brain were found in a number of cases. There were three cases of general arteriosclerosis of an advanced type. Thickening of the walls of the smaller vessels, occurring along with interstitial hyperplasia, was noticed very frequently in studying sections of the organs microscopically. This year's percentage of arterial disease compares closely with that of last year, which was 68 per cent. Valvular disease of the heart was present in five of the cases. Arteriosclerosis is found more often in the colored race than in the white, this fact has been often noted. It would appear from the very frequent occurrence of arterial disease that it played a very important role in the pathogenesis of mental aberration.

Connective tissue hyperplasia is by no means limited to the aged, we often find well advanced fibroses in comparatively young subjects.

## NEPHRITIS.

The kidneys were found diseased in thirteen cases, four were of the interstitial variety and the remaining nine were parenchymatous. There were two cases of tuberculosis of the kidney. Nephritis, arterial disease and tuberculosis seem to be more commonly met with than any other pathological conditions and must bear a very close relationship to insanity.

## BRAIN.

A number of the cases presented gross lesions. In thirteen the meninges were thickened, and in nine there was atheroma of the basilar vessels. Atrophy of the convulsions was noticed in eight cases. There were six cases of edema and four of congestion. There were three cases of cerebral softening; two of hydrocephalus; two of acute meningitis; and one of cortical tuberculosis. In studying the cortex microscopically the nerve cells were found degenerated in six of the cases, and in six there was sclerosis. The cortex was not studied microscopically in all the cases, this was owing to the fact that in some a sufficient time had elapsed before the section was made for post-mortem changes to occur, and in these cases a microscopical examination would have been useless. Psychoses due to gross changes in the brain are the exception rather than the rule; in many instances the cause of the mental disease is not alone dependent upon morbid changes in the brain itself, but, also upon various pathological conditions of other organs. For this reason no pathological changes are found in the brain in many mental diseases and when, with time, they do appear they are consecutive and not primary.

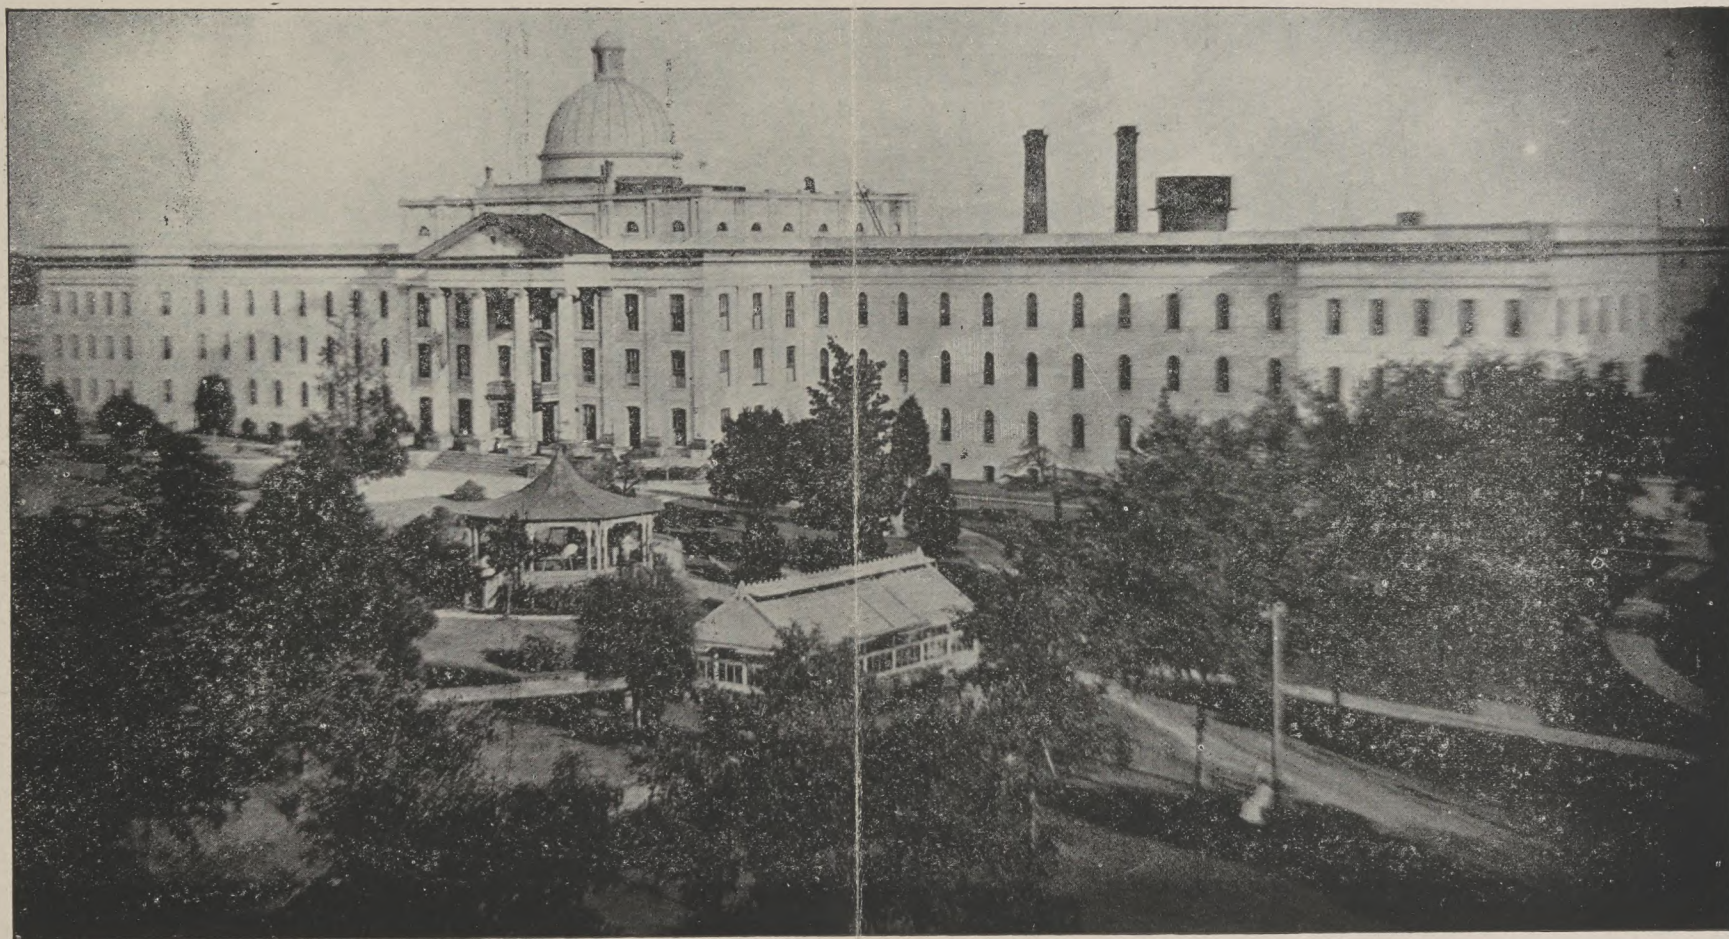

## TUBERCULOSIS.

Tuberculosis was found to be present in fourteen of the cases, making a percentage of fifty. It was limited to the lungs in eight cases, in the remaining six the affection was general. Last year's percentage was about fifty-five.

A few of the cases which have come to autopsy are of sufficient interest to deserve especial mention.

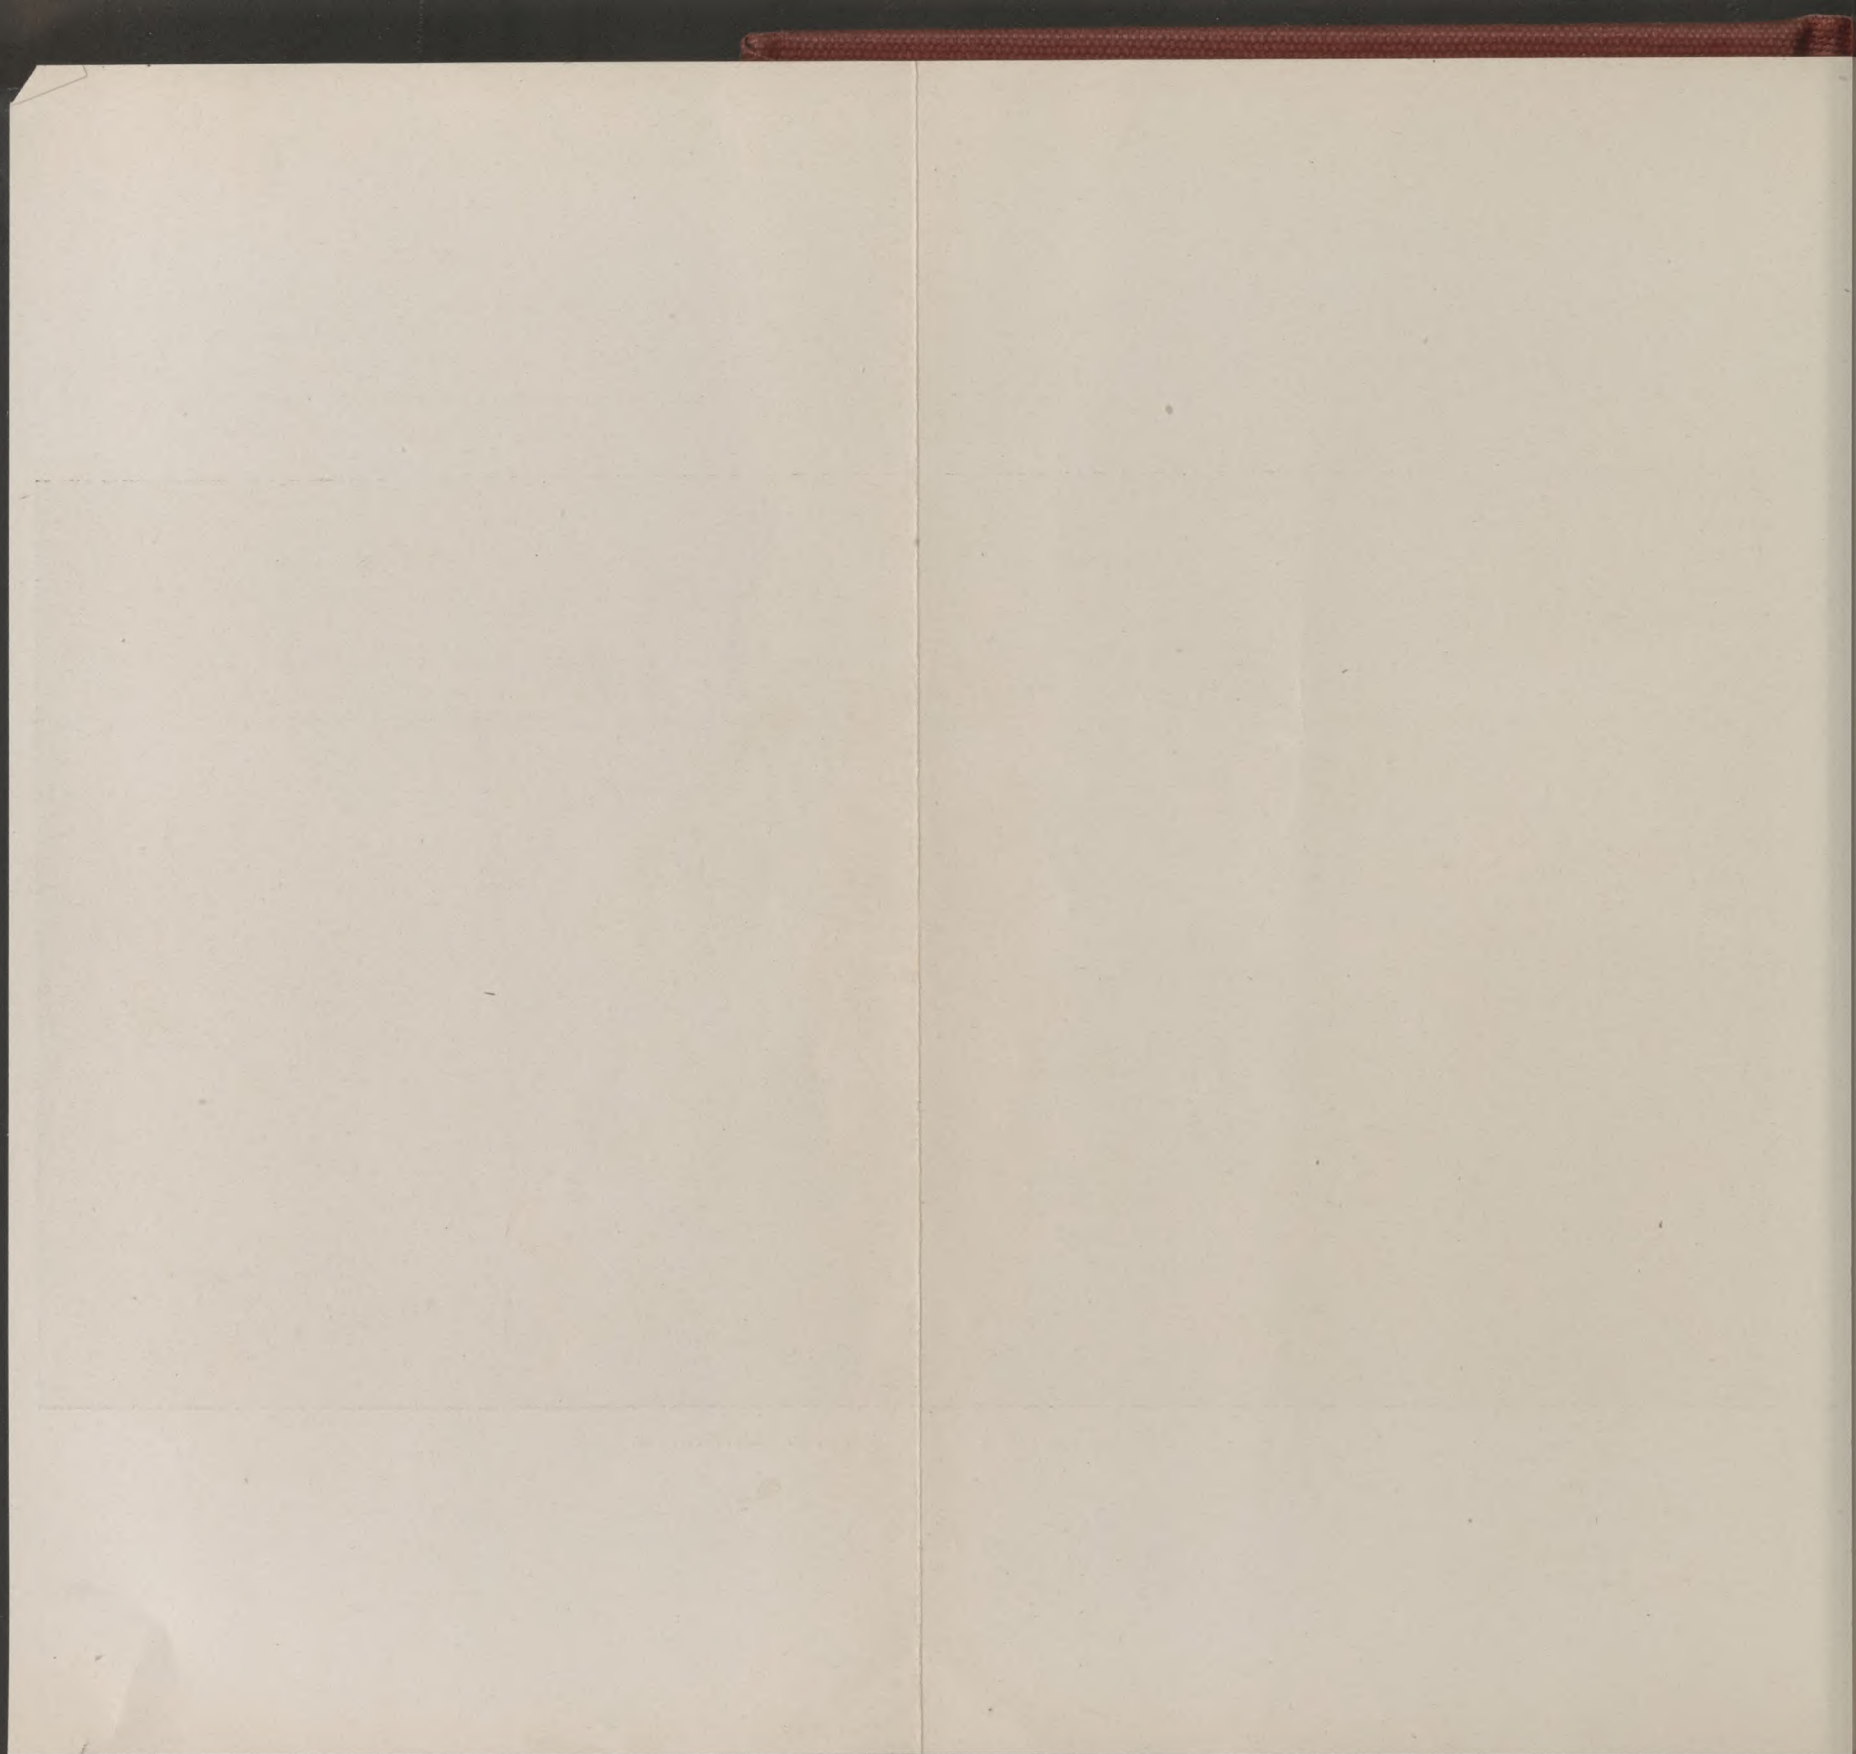

No. 266. The patient, a mulatto male, was admitted on November the 13th. 1903, with a history of having been hit on the head. A physical examination made shortly after admission showed noth-

CENTER BUILDING GEORGIA STATE SANITARIUM.

ing except a general exaggeration of reflexes. For about four days preceding death the patient was in a stupor and showed clonic contractions of the limbs on the left side. The post-mortem examination was made on January the first of last year and the following interesting condition was found: About three and one-half cubic centimeters above the external angle of the orbit, on the right side, was observed a small semilunar scar, beneath which could be just felt a hard elevated mass; this was found to be a bullet imbedded in the frontal bone. There was no evidence of fracture of the outer table of the skull but the inner table presented a depressed stellate fracture of considerable size. The dura at this point was greatly thickened and adherent both to the skull and the brain. A small spicule of bone had penetrated the dura and could be seen protruding from its under surface. The brain presented an area of yellow softening some four centimeters in diameter, involving the middle and superior frontal convolutions.

No. 269. Ninety-three stones were removed from the gall-bladder weighing in all nine and six tenths grams. The smallest weighed two one-thousandths of a gram and the largest weighed two and six-tenths grams.

No. 270. A case of carcinoma with wide spread metastasis. The whole of the lower curvature of the stomach, the uterus and its appendages were one solid tumor mass and the peritoneum throughout its whole extent was covered with small growths. There was a growth just starting at the apex of the left lung. The liver was not involved.

No. 287. The patient was admitted on January the thirteenth with a history of alcohol addiction, very sclerotic arteries, and marked diminution in the liver dulness. Preceding death there was anasarca, dyspnoea and a rapid weak pulse. Post-mortem examination was made on December eighth and a most interesting liver was found, it weighed fifteen hundred grams, was adherent everywhere and very difficult to remove. When removed it was found to be irregularly quadrilateral in shape and greatly atrophied. Its surface was white, very uneven, and was covered with a thick fibrous capsule which, when stripped, revealed a coarsely granular hob-nail surface. The cut surface was yellow and greasy and the consistency was very much increased. The connective tissue was greatly increased throughout the whole organ, but, more especially on the under surface, and in the left lobe, where it seemed to be in excess of the parenchyma. On the under surface there were many

round protuberances of considerable size which, on section, were greenish yellow in color, and formed almost entirely of connective tissue.

#### URINE ANALYSIS.

Number of specimens examined ..... 830

TABLE No. 1.

#### CHEMICAL ANALYSIS.

	No. of cases	
Serum-albumen .....	220	28.9%
Nucleo-albumen (in excessive amount).....	39	4.6%
Indican.....	250	30.0%
Indican, in considerable amount.....	124	14.8%
Uric acid, in excess.....	169	20.3%
Sugar.....	9	1.3%
Pathological urobilin .....	1	
Positive diazo reaction.....	8	
Albumose.....	2	

#### MICROSCOPICAL EXAMINATION.

Casts with albumen .....	123	14.8%
Casts alone.....	35	4.2%
Pus cells.....	38	4.5%
Red blood cells and shadows.....	24	2.8%
Trichomonads .....	12	1.4%
Spermatozoa.....	27	3.2%
Crystalline and amorphous urates .....	169	20.3%
Calcium oxalate crystals.....	60	7.2%
Uric acid crystals.....	20	2.4%
Carbonate crystals.....	2	.2%
Phosphate crystals.....	9	1.0%

TABLE No. 2.

TABLE No. 4.

## Duration of mental disease of those having albumen and casts in the urine.

Under one month.....	13
One to three months.....	22
Three to six months.....	15
Six months to one year.....	12
One to five years.....	26
Over five years.....	33
Unknown.....	3

Total..... 123

TABLE No. 5.

Age of those having albumen and casts in the urine.

Under twenty years .....	7
Twenty to thirty years.....	18
Thirty to forty years.....	35
Forty to fifty years .....	41
Fifty to sixty years.....	10
Sixty to seventy years .....	9
Over seventy years.....	3
Total .....	123

A large amount of clinical work has also been done during the year, other than urine examinations, as will be shown by the following:

Blood examinations .....	54
Smears studied .....	4
White cell counts.....	11
Red cell counts .....	14
For malarial plasmodium.....	7
Complete .....	18
Bacteriological examinations.....	25
Surgical pus .....	2
Vaginal discharge .....	1
Uterine scrapings .....	1
Cerebrospinal fluid.....	1
Throat culture .....	3
Urethral discharge.....	3
Plural effusion.....	1
Drinking water .....	3
Disinfectants .....	10
Sputum examinations .....	170
For tubercle bacilli .....	163
For pneumococci .....	7
Widal reactions.....	51
Tuberculin reactions.....	10
Feces examined for intestinal parasites.....	35
Stomach contents.....	2
Uterine scrapings .....	1
Plural effusion .....	1
Chemical analysis of specimens of drinking water.....	3

I wish to acknowledge assistance rendered me by Dr. J. W. Mobley in the preparation of this report.

## Report of Treasurer.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 2nd, 1905.

*Dr. T. O. Powell, Superintendent, Georgia State Sanitarium;*

MY DEAR SIR:—I beg to submit herewith the Receipts and Disbursements of my office as Treasurer for the fiscal year.

### SUPPORT AND MAINTENANCE.

#### RECEIPTS.

1904		
Jan. 1	To Balance .....	\$ 20,590 26
1905		
Jan. 2	To Cash from State Treasurer.....	325,000 00
Jan. 2	To Overdraft with Treasurer.....	5,156 56
		<hr/>
		\$ 350,746 82

#### DISBURSEMENTS.

1905		
Jan. 2	By Subsistence .....	\$ 109,276 39
	Clothing .....	42,284 87
	Fuel and Transportation.....	34,401 88
	Salaries .....	28,262 30
	Wages .....	88,235 10
	Incidental Expenses.....	42,307 81
	Medical Supplies .....	3,507 57
	Contingencies.....	1,276 57
	Postage and Stationery .....	1,194 33
		<hr/>
		\$ 350,746 82

### SPECIAL APPROPRIATION LIGHTING AND EQUIPPING NEW BUILDING.

1904		
Jan. 1	To Balance .....	\$ 1,652 25
1905		
Jan. 2	To Cash from State Treasurer.....	6,000 00
		<hr/>
		\$ 7,652 25
1905		
Jan. 2	By expenditures.....	7,652 25

## COLONY FUND.

1904		
Jan. 1.	To Balance.....	\$ 1,154 22
1905		
Jan. 2.	To Cash from State Treasurer.....	1,000 00
		<hr/>
		\$ 2,154 22
1905		
Jan. 2.	By expenditures.....	2,154 22

Respectfully submitted,  
L. H. ANDREWS, Treasurer,  
Georgia State Sanitarium.

## THE MERCHANTS &amp; FARMERS BANK.

MILLEDGEVILLE, GA., January 2nd, 1905.

In account with L. H. ANDREWS, Treasurer,  
Georgia State Sanitarium.

1905		
Jan 2	To Balance to Credit .....	\$ 17,961 28
		ROBT. L. DAY, Cashier.

L. H. ANDREWS, Treasurer,  
In account with GEORGIA STATE SANITARIUM.

1905		
Jan. 2	To Balance to Credit in Merchants & Farmers Bank.	\$ 17,961 28
	Overdraft.....	5,156 56
		<hr/>
		\$ 23,117 84
Jan 2	By Outstanding Vouchers of Steward for month or December, 1904, not paid .....	\$ 23,117 84

Respectfully submitted,  
L. H. ANDREWS, Treasurer.

## Report of Steward.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 2nd, 1905.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have the honor to transmit to our honorable Board of Trustees through you, this my report as Steward from January 1st, 1904, to January 1st, 1905.

Abstract "A" shows the balance brought forward from last fiscal year, the amount drawn from the State Treasurer for support and maintenance, together with a classified statement of the disbursements and an overdraft of \$5,156.56 due our Treasurer.

Abstract "B" shows the expenses on account of Subsistence.

Abstract "C" shows the expenses on account of Clothing.

Abstract "D" shows the expenses on account of Fuel and Transportation.

Abstract "E" shows salaries paid Officers.

Abstract "F" shows wages paid Employees.

Abstract "G" shows Incidental Expenses.

Abstract "H" shows the expenses on account of Medical Supplies.

Abstract "I" shows the expenses on account of Contingencies.

Abstract "J" shows the expenses on account of Stationery and Postage.

Abstract "K" shows the expenses on account of Special Appropriation for New Buildings.

Abstract "L" shows the expenses on account of Special Appropriation for Colony.

Abstract "M" shows the requisitions drawn on State Treasurer for Support and Maintenance.

Abstract "N" shows the average number of patients from 1873 to 1905, together with the per capita cost per diem and per annum.

Abstract "P" shows the cost of maintaining one patient by the year, month, week and day.

Our Storekeeper, Mr. Hunter, reports stock on hand \$14,848.34.

Our Apothecary, Mr. D. S. Carrington, reports stock on hand \$2,273.50.

Our per capita per diem is 33<sup>25</sup>/<sub>100</sub>.

By reference to the report of Mr. G. W. Hollinshead, Assistant Steward, you will see results of farm, garden, dairies, hogs, etc., also a report of stock, wagons, utensils and implements on hand. As required by law, duplicate vouchers of the expenses, accompanied by the required certificate, approved by yourself and audited by the Trustees, have been filed in the Executive Department in Atlanta. With sentiments of highest regard for confidence reposed in me in the discharge of my duties by our Board of Trustees and yourself, I am

Very respectfully,

LUCIUS J. LAMAR, Steward, G. S. S.

#### ABSTRACT "A"

Showing balance brought forward from last year, and also the money received, with a classified statement of the disbursements from January 1st, 1904, to January 1st, 1905.

## Report of Assistant Steward.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 2nd, 1905.

*Mr. L. J. Lamar, Steward:*

DEAR SIR—I herewith hand you my report as Assistant Steward for the year 1904, of the Dairies, Garden, Farm, Pork and Transportation. Also statement of stock, wagons, etc., on hand January 1st, 1905. We have lost since our last report 248 head of hogs, from cholera, 2 mules and 5 milch cows, 2 from old dairy and 3 from new dairy. The stock are all in good condition now, and I think the returns from the different departments for the year very good indeed, taking everything into consideration.

Very respectfully,

GEO. W. HOLLINSHEAD, Asst. Steward.

## Report of Dentist.

GEORGIA STATE SANITARIUM, January 2nd, 1905.

*Dr. T. O. Powell, Superintendent:*

DEAR DOCTOR:—The following is a report itemizing the Dental Treatment and Operations of this department during the year 1904.

Alveolar Abscesses treated .....	27
Periodontitis treated .....	25
Stomatitis treated .....	11
Pyorrhoea Alveolaris treated .....	32
Acute Odontalia treated .....	9
Calcareous deposits removed, number patients .....	51
Pulps Devitalized, removed and cavities and pulp canals filled.	47
Putrescent Pulps removed, tooth treated, cavities and pulp canals filled .....	59
Cavities filled with Oxphosphate Zinc .....	237
Cavities filled with Amalgam .....	439
Cavities filled with Guttapercha .....	3
Cavities filled with gold .....	44
Crowns made .....	6
Crowns reset .....	2
Artificial Dentures made .....	1
Artificial Dentures repaired .....	3
Hypersensitive teeth from erosion or attrition cauterized with Nitrate of Silver .....	6
Teeth cleaned, number patients .....	10
Teeth and roots badly decayed, ulcerative, extruded .....	1,199
Number of patients during the year .....	915

Collected from patients for material used \$18.75.

The above amount turned over to the Steward.

Respectfully submitted,

J. C. RICHARD, Dentist.

## Report of Apothecary.

GEORGIA STATE SANITARIUM, January 2nd, 1905.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—The following is my report of Apothecary Department from January 1st, 1904, to January 1st, 1905.

Being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution, we have done so at all times where it was economy to do so, restricting purchases solely to chemicals and such specialties as are required by the physicians.

### STATEMENT.

The following is statement of all expenditures, etc., of Apothecary Department from January 1st, 1904, to January 1st, 1905.

Amount of drugs purchased, including druggist sundries, dental and laboratory supplies, etc., all preparations for fumigation, disinfecting and sanitary purposes, also all alcohol, wines, and whiskies ....		\$ 3,547 36
Amount drugs sold officers and employees .....		328 52
Amount drugs on hand .....		2,273 50
Fixtures, etc .....		385 50
Number of prescriptions filled .....		24,951

Respectfully submitted,

D. S. CARRINGTON, Apothecary.

## Report of Engineer.

---

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE GA., January 2nd, 1905.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have the honor of submitting herewith my report of the workings of this department from January 1st, 1904, to January 1st, 1905.

Respectfully submitted,

T. H. DESAUSURE, Engineer.

---

### IMPROVEMENTS.

The laundry building has been enlarged by extending the building 40 feet and by the addition of a dry-room annex, twenty-four by seventy-one feet. This gives an additional area of 4,600 square feet of floor space which was much needed. The mechanical equipment of this building has been improved by the addition of one American Mammoth Mangle, one all metal washing machine and two dry rooms of fourteen dry-racks each. All of the drying rooms have been equipped with automatic sprinklers.

An addition of one room with a closet attached has been made to one of the cottages.

A brick wall seventeen hundred and fifty-six and a half (1,756½) feet long, and averaging eleven (11) feet in height above ground has been built around the Whittle and Cabaniss buildings.

Some 3,900 cubic yards of earth has been moved at the back of the Cabaniss building, making a recreating yard at that place for the patients; and all of the courtyards about the Whittle and Cabaniss building, save one, have been graded with a fall away from the house to carry off the water.

The grounds around the Central Railroad station near the Green building have been graded and terraced, Bermuda sod being placed on all of the slopes, and grass roots planted on the levels.

Of the two wings of the Cabaniss building that remained unfinished on the interior, we have completed one entirely, and the other, all save some of the plastering, the painting, hanging the doors, plumbing and steam heating.

Two thousand two hundred and sixty-nine (2,269) squares of tin roof, all of the outside door and window frames and sash on the back of the main female building; and all of the buildings at the colony (31,748 square feet) have been painted.

All of the floors of the rooms of the Infirmary of the Green building have been given three coats of floor finish and all of the wood and iron work finished in white enamel.

All of the walls of the front wing of the Infirmary of the main female building have had the white-wash scraped from them, and the entire surface painted. The woodwork has also been finished in white enamel and the floors with liquid granite floor finish.

Twenty drops and jacks have been added to the switchboard of the telephone exchange; and six new telephones, with the necessary wires between the buildings, have been installed in the Whittle and Cabaniss wards.

The four front porches of the Green building have had wire guards put across the outside, enabling the doors of the wards to be left open in good weather, when the patients may have free access to the porches.

Woven wire fences, one hundred and fourteen panels in all, have been put up in front of the Green and Cabaniss buildings as well as across the space between the fronts of the Whittle and Cabaniss buildings.

Sixty fire extinguishers have been bought and placed upon the wards, and five hundred feet of two and a half inch, and three thousand and fifty feet of one and a half inch hose have been added to the fire fighting equipment.

To the plumbing of the institution has been added sixty-six improved automatic seat flushing closets, to take the place of old ones removed, and forty-two lavatories, and twenty-one urinals have been bought and most of them put up.

Covered ways with brick floors have been built between the kitchen and the main dining rooms, and the basement rooms in the old buildings, under the 9th and 18th wards, have been connected together by arches in the partition wall forming passage ways, which enables the patients and nurses to get to and from the kitchen and dining rooms in bad weather without getting wet.

The wooden curb of the suction well at the water works has been taken out and replaced with a brick one.

During the time of extreme dry weather last summer a well eight feet in diameter and seven feet below the bed of the creek was dug

near the bank and the suction pipe of one of the pumps extended to it.

Besides the usual repair work, the following has been done in the carpenter shop:

Dressing and matching 78,274 square feet of flooring and ceiling.

Dressing 7,080 lineal feet of door and window casing.

Dressing 7,080 lineal feet of half round moulding.

Dressing 8,690 lineal feet of quarter round moulding.

114 Panels woven wire fence.	368 Coffins.
7 Gates.	97 Boxes for shipping coffins.
8 Bread paddles.	643 Head boards for cemetery.
14 Honimy paddles.	7 Sink tables.
92 Lattice benches.	1 Double sink table.
7 Door frames.	2 Dining tables.
5 Sets steps.	2 Seventeen foot ladders.
37 Sets of shelving.	2 Twenty foot ladders.
220 Curtain strips.	2 Small porches floored.
1 Latticed partition.	104 Hoe handles.
17 Step ladders.	73 Scrub mops.
1 Voucher box.	16 Trays for gas works.
11 Clothes racks.	1 Fertilizer mixing box.
1 Swinging scaffold.	1 Water closet ceiled.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 14th, 1904.

*To the Hon. Board of Trustees, Georgia State Sanitarium:*

GENTLEMEN:—Pursuant to your resolution authorizing me to investigate all possible sources of water supply for the Sanitarium, and to present to you an estimate of the probable cost of establishing pumping station, etc., and further, that I should ascertain from the Milledgeville Water Co., a statement of the terms upon which

they could undertake to supply this institution with water, I beg to hand you the following

### REPORT.

I have investigated the possibilities of four different means of improving our water supply, namely, three from the river, with pumping stations located at different points, and a fourth which has as its object the storage of water from Camp Creek.

In each of the estimates for procuring the water from the river, I have included the cost of removing the present pumping outfit from its location on Camp Creek, to the proposed site at the river, so soon as the new outfit shall have been sufficiently completed to enable us to dismantle the old one. This would give us duplicate pumps and boilers at the new plant, which is essential.

Each estimate also includes the cost of a complete filtering plant for all of the water pumped.

The estimates do not include the cost of the land for pumping plant, nor of the right of way through the properties crossed by the pipe line.

The first location investigated is near the mouth of Camp Creek; it is on land owned by the Sanitarium. The river at this point approaches the Sanitarium nearer than at any other. This location has the disadvantage of being below the city of Milledgeville, the sewerage of which is emptied into the river.

The cost of the station located here, with the pipe line, I estimate to be \$32,684.35

The next available point for the location of a pumping station is two hundred yards above the point at which Tan Yard branch flows into the river. This is beyond almost all of the houses of Milledgeville and is beyond all of the drainage from the city, except that from a few houses and the slaughter pen of the local butchers. The slaughter pen of the contractors, who for many years supplied the Sanitarium with beef, is also located in the area which drains into the river above this location; but at present this pen is not in use.

The cost of locating at this point is \$50,554 84.

To get entirely above the few buildings and the above mentioned slaughter pens, it would be necessary to go fifty-one hundred feet further up the river; or beyond the mouth of Tobler Creek. This point is three and three-quarter ( $3\frac{3}{4}$ ) miles from the Sanitarium, and a plant located there would cost \$60,343.04.

If the pumping station is placed at either of the points located above Milledgeville, we would be to a certain extent dependent upon the stability of the dam of the Oconee River Mill, which is located just below Tan Yard branch; and measures would have to be taken to insure our supply of water, should that dam be washed away.

The fourth study of the subject considers the plan of placing a dam across a ravine on the futher side of Camp Creek from the insitution, and in this way making an impounding reservoir into which water from Camp Creek could be pumped during the time when it is in best condition.

The possibly contaminated condition of the water of Camp Creek from the fifteen to twenty negro houses on the water shed of that stream, the most distant one of which is not more than a mile above the pumping station: and the fact that the water in the storage reservoir will be more or less stagnant, should have weight in the consideration of this plan.

I wish to state in this connection, that during times of freshets, when the water from the river flows up the creek across the mouth of our sewer and by our present pumping station, our water must necessarily be contaminated by our own sewerage. If the above mentioned plan of having a storage across the creek were adopted, pumping from the creek at such times of high water could be discontinued.

I estimate that the cost of this arrangement to be \$21,800.

I have a proposal from the Milledgeville Water Company in which they state their willingness to furnish us with water from the Moran Springs at the following rates:

For not less than 50,000 gallons per day, 8 cents per 1,000 gallons

For all in excess of 50,000 gallons per day, and up to 200,000, 7 cents per 1,000 gallons.

The Company further states that they would be pleased to consider a proposal for a twenty-five year contract, substantially on the above terms.

All of which is respectfully submitted,

T. H. DESAUSURE.

## Report of Matron.

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., January 2nd, 1905.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—With thanks to the officers and to my co-workers who have in any way aided me, permit me to submit the enclosed as my report from January 1st, 1904, to January 1st, 1905. I will add that all repairing has been done for the institution and all scraps and remnants have been put to good use, and have been properly accounted for through the Store Keeper's Office.

Yours respectfully,

MRS. J M. DARNELL, Matron.

## Report of Chaplain.

81  
002

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., January 2nd, 1905.

*Dr. T. O. Powell Superintendent:*

DEAR SIR:—As Chaplain of the State Sanitarium from January 1st, to October 20th, 1904, I preformed the usual duties that devolve on this office.

Divine services were held twice weekly, on Sundays and Thursdays. There were few interruptions during the year because of inclement weather or quarantine.

The patients attended the services in large numbers and manifested a very great degree of interest always. There is no doubt that the granting of such religious privileges as are afforded by regular public services is deeply appreciated by a large number of the inmates of the institution whose condition permits them to attend. They especialy enjoy the singing which is under the efficient care of Mrs. Julia West.

Some visits were made by me to patients from time to time according as the Superintendent and physicians deemed advisable.

Funeral services were always held for those who died and were interred in the local cemetery.

Thanking you and the staff for various courtesies extended, I beg to remain,

Very truly yours,

D. W. BRANNEN, Chaplain.

SIXTY-SECOND ANNUAL REPORT.  
OF THE  
BOARD OF TRUSTEES  
OF THE  
Georgia State Sanitarium,  
For the Year Ending December 31st, 1905.

---

MILLEDGEVILLE, GA., December 31st, 1905.

*To His Excellency, Joseph M. Terrell, Governor:*

SIR:—In obedience to statutory requirement the Board of Trustees of the State Sanitarium submits herewith its Sixty-Second Annual Report of the conduct and management of same for the year ending December 31st, 1905.

Attached to and forming part of this report will be found the reports of the Superintendent and his subordinate officers to which you are referred for detailed information as to the movement of its population, and receipts and disbursements of all monies appropriated for its support.

In the beginning of this report the Board would make grateful acknowledgement of the cordial support given it by your Excellency in the discharge of its duties, and of the liberal appropriation by the General Assembly for the support and maintenance of the Sanitarium.

FINANCES.

The year 1904 closed with an overdraft of \$5,156.56. This overdraft has been met, all expenses have been paid, and the year closes with a surplus of \$308.48 in the hands of the Treasurer. The expenditures for all purposes was \$337,191.52; daily average

of patients under treatment was 2938; making a per capita cost of \$113.00 as against \$121.79 last year. The daily per capita cost was .3096 as against .3328 last year.

This low cost has not been reached without the practice of closer economy than meets its approval, but the large number of patients to be provided for within the appropriation left the Board no alternative. With the gradually increasing cost of living, the Board does not feel that a per capita cost per diem of 35 cents will be excessive, and it is firm in its conviction that future appropriations, based upon present conditions, should be made on this basis.

#### POPULATION.

875 patients were received during the year; 873 recovered, eloped, died or were removed; leaving a net increase of two, and making the population to day 2939.

The total number of patients under treatment during the year was 3812; the daily average 2938, an increase of 58 over last year.

The number of officers and employees is 475, making a total population to day of 3414.

The percent of recoveries based upon the number of admissions was 42½.

The number of deaths from tuberculosis was 121, of which 45 were white and 76 colored patients.

#### EPILEPTICS.

The Board very heartily concurs in the suggestion of the Superintendent regarding the epileptic patients, numbering 322, now in the Sanitarium, that such patients should by all means be colonized in some other section of the State. Epilepsy does not necessarily mean insanity, and to confine such patients with the insane works an injury to both classes. Such colonies have been established in many of the States with satisfactory results; and the Board hopes that such provision will soon be made for them in Georgia.

#### SCHOOL FOR DEFECTIVES.

The Board would again call your attention to the hopeless condition of the feeble-minded or defective children under sixteen years of age, and numbering sixty, now confined in the Sanitarium for lack of proper provision for them elsewhere. The only door of hope open to them lies in a training school where by scientific

### *Georgia State Sanitarium*

methods some few of them may possibly be fitted in some measure for self support. No more pathetic sight is to be seen in this institution than these helpless little ones, and the Board earnestly craves for them the one chance left them. Such a school should have no connection with an asylum for the insane.

#### TUBERCULOSIS WARDS.

The Board would call your Excellency's attention to the significant fact that of 500 deaths in the Sanitarium last year 121 were due to tuberculosis. Funds should at once be placed at the disposal of the Board for the erection and equipment of four tubercular wards, one for each class of patients to be erected amid proper sanitary surroundings so that such patients can be completely isolated and given such hygienic treatment as may give them some chance for recovery, while at the same time removing from the present wards a grave and ever present danger to patients not so afflicted.

The Board therefore renews its previous recommendation, and earnestly urges an appropriation of \$10,000.00 to be made immediately available for this purpose.

#### WATERWORKS AND ELECTRIC LIGHTS.

The General Assembly very generously appropriated \$75,000.00, or so much thereof as may be needed, to supply these much needed wants. As soon as possible after the appropriation was made the Board met and invited proposals for the construction of a complete waterworks filtration plant. After careful consideration of such proposals the contract on Nov. 16th, last, was awarded to Messrs. Walton & Wagner, Rome, Ga, the consideration being \$65,000.00. This plant will be located on the banks of the Oconee River  $3\frac{3}{4}$  miles from the Sanitarium, and sufficiently far above Milledgeville to avoid the drainage of that place. It will have a capacity of 1,000,000 gallons daily, and will meet every need of the institution for years to come.

No contract will be made for an electric light plant until the completion of the waterworks.

#### IN CONCLUSION.

The Board has much pleasure in expressing its appreciation of the faithful and able services of Superintendent Powell and his

Staff of assistants. Each of them seems actuated by the highest motives, and each manifests a commendable zeal in the discharge of his duties.

It is gratifying to see the harmony prevailing among the officers of this institution, and to realize the efforts being put forth by each of them for the relief of the afflicted ones in their care. Foremost of them all stands Superintendent Powell, big of heart and broad of mind, whose life-long work for suffering humanity has endeared him to all our people.

Respectfully submitted,

JOEL BRANHAM, President,  
THOS. G. LAWSON, Vice-President,  
RICHARD JOHNSON, Secretary,  
JAS. B. BAIRD, M. D.,  
CHAS. J. MONTGOMERY, M. D.,  
THOS. M. SWIFT,  
JNO. L. CULVER,  
W. F. BRUNNER, M. D.,  
HENRY BANKS,  
JNO. T. BRANTLEY,

Board of Trustees.

## **Report of Superintendent,**

**For the Year Beginning January 1st, 1905, and Ending  
December 31st, 1905.**

---

GEORGIA STATE SANITARIUM, January 1st, 1906.

*To the Honorable Board of Trustees, Georgia State Sanitarium:*

GENTLEMEN —In compliance with the law and rules of the Sanitarium I respectfully submit for your consideration the Sixty-Second Annual Report of the Institution for the year ending December 31st, 1905, together with the reports of the Steward, Treasurer, and other officers of the institution, which I trust will give you a detailed and satisfactory account of the conduct and management of the Sanitarium for the year 1905.

On January 1st 1905, there were white patients on hand 2052 and colored 885, There have been received since 549 whites and 326 colored making a total reception of 875.

There have been discharged, removed, eloped, and died 873, leaving in the Institution January 1st 1906, 2939 patients, of whom there are 100 whites and 35 colored on furlough, not discharged.

The average number of patients under treatment during the year was 2938, while the total number receiving treatment was 3812.

It will be seen that the average number receiving treatment was 58 more than last year. We have two more patients on hand than at the close of last year.

The following tables will give in detail the movement of the white and colored population:

## STATEMENT—WHITE.

## HEALTH.

We had a good many deaths during the year. It will, however, be seen from the statistics giving the causes of death that but few have died from curable diseases; paresis, epilepsy, apoplexy, organic brain disease and tuberculosis, which is alarmingly fatal with the negroes especially, have been the principal causes. I trust that this session of the General Assembly will make some provision for isolating the tubercular cases, and thus prevent to some extent the spread of the disease, and give those that are afflicted the benefit of open air treatment with good hygienic and prophylactic surroundings. I know you appreciate the necessity of isolating the tubercular cases, and trust that you may see your way clear to call the attention of the General Assembly again to this important measure.

From the best information I can obtain there is a larger per cent of tuberculosis with the insane than with the sane in proportion to the population. You can readily appreciate the fact that it is impossible to get their co-operation. Most of them will not use cloths or cups to expectorate in, and will spit anywhere and everywhere; hence, you can see it is a difficult matter to prevent the spread of the disease, and some of them will seek the dark places on the wards where the sunlight never penetrates. Open air and sunlight with good nourishing food is regarded as one of the most important treatments of tuberculosis. It is claimed by some that strong sunlight will destroy the tubercular germs in a few hours.

We have one tent and one pavilion for the colored females which have been in use for some months, but the yard is so small we cannot get a strong sunlight and free circulation of air. It is too close to the building and walls surrounding the building, and on that account we cannot prevent more or less dampness at times, though there has been a marked improvement of some cases that were given open air treatment in the early stages of the disease, which is perhaps the only favorable stage for treatment.

It should be remembered that a large majority of the insane inherit an unstable, weak mental and physical constitution which furnishes easy prey for tubercular germs. A thorough mental and physical examination is made of every patient admitted to the institution where their condition will justify it. Many are put to bed on their reception, and never get out of it, some living only a few days.

We have had a good many cases of influenza throughout the Institution during the year.

#### SUGGESTIONS.

I have called the attention of the General Assembly, through the Honorable Board of Trustees, to the fact that there was a number of patients being received in the Sanitarium that should have separate provision made for them in some other section of the State; for instance, the epileptics by all manner of means should be colonized. We have now in the Sanitarium 322 epileptics, and it is a decided injury to both classes to have them together. Some of the States have established epileptic colonies, and the results of their care have been much more satisfactory in every particular. I trust the General Assembly will consider carefully the importance of such a provision for this class of our unfortunates. While epilepsy is

regarded as incurable, by colonizing them their surroundings will be much more pleasant, and their condition greatly ameliorated. There are other classes that are received in the institution that should have separate provision for their care and training; namely, the feeble minded and idiots. They also should be separated from the insane, and placed in schools for feeble minded children. It is impossible to accomplish what might be done by training or teaching them just so long as they are confined in a hospital for the insane. These classes should be separated and placed in different sections of the State.

#### COLONY FOR A CERTAIN CLASS OF THE COLORED MALE PATIENTS.

We thought that it would be a rational treatment to establish a colony in what is known as the Piney Woods, and an ideal location was selected. We began the work in 1898 as an experiment. We first put up a one story dormitory accommodating about 25 or 30 patients. We have since erected three one-story frame buildings, "T" shape, 117½ feet x 27½ feet, one-half dormitory and the other half rooms for the seclusion of patients should any become excited or dangerous to others at any time. Experience has proven, however, that half of the rooms would have been all that was necessary. We had also a one story congregate dining room put up, 110 feet by 27½ feet, with kitchen and scullery attached, 50 feet by 27 feet. All of the buildings are thoroughly ventilated; large doors at each end of hall, and also cross halls with many windows. The patients get an abundance of sunlight and pure air. They, however, literally live in the open air during the day when the weather will admit. The average number of patients at the colony is about 80.

The water for the buildings and lots is obtained from a spring branch, and raised by rams located about half a mile distant. I am gratified to state that the experiment has been a success from the very beginning physically, mentally and financially. We have had only two cases of tuberculosis at the colony, and it is possible that they contracted it before going there. It is very rare that they have any sickness of any kind. They do not need narcotics or hypnotics to produce sleep.

I especially call your attention to the report of the Assistant Steward as to the amount of the various products raised there during the year. The balance in favor of the colony clear of all expenses this year is \$8,140.67. While none of the patients are

forced to work all are encouraged to do something. Perhaps with some of them it will take about three to make one good hand. Employment is a very important treatment for the mental and physical improvement of the insane when their condition will justify it. The colony patients are decidedly the healthiest and happiest class we have.

### RECOVERIES.

This estimate is based upon the number of patients received during the year. Of the 875 received, 470 were not regarded as hopeful cases, but chronic and incurable. With such receptions the percent of recoveries was  $42\frac{1}{2}$ , which I regard as very good indeed. It seems to be a difficult matter to impress the layman that early treatment for the insane, or at least the large majority of them, is of vital importance. The first treatment should be to remove them from home, relatives and friends, and the surroundings under which their insanity occurred. It would be infinitely better if they would send them in the early stages when there is hope for restoration than to wait until the disease becomes chronic and incurable, and then send them to the institution for care during their natural life. While it is true there are a few cases that may be kept and treated at home, such cases, however, are rare.

### PATHOLOGIST.

We will have no report from the Pathological Department this year. As you know, Dr. Pumpelly, the Pathologist, resigned to accept a position in Mercer University. Dr. Lamar is now at Johns Hopkins equipping himself for the position, and I am satisfied that he will fill it to the thorough satisfaction of everyone.

### EMPLOYMENT AND AMUSEMENTS.

The amusements have continued as usual under the direction of Dr. J. M. Whitaker, the First Assistant Physician. He is very faithful in endeavoring to have them as often as possible, and as diversified as he can with the means at our command.

### IMPROVEMENTS AND REPAIRS.

There have been many improvements and repairs made during the year. This, of course, is to be expected in a Sanitarium as large as this. For a full and complete account of the work done

in this department I refer you to the report of the Engineer, Capt. DeSaussure.

#### FINANCES.

You will see by reference to the report of our faithful and pains-taking Steward, Mr. Lamar, that the per capita is .3096 per diem. His report will give a full and complete statement of all purchases made, from whom, price paid, and aggregate cost, and also balance on hand with our Sanitarium Treasurer.

#### ASSISTANT STEWARD.

The Assistant Steward's report will set forth in detail the amount of various products raised in the garden, farm and dairies. Also the amount of pork, which was 28,623½ lbs. I am sorry to say that we have lost a good many hogs from cholera or the amount of pork would have been much larger.

#### STOREKEEPER.

The Storekeeper's report gives a full and detailed statement of the management in that department—a statement of all goods received, the amount issued and to whom.

#### BOOK-KEEPER.

The report of our faithful book-keeper, Mr. Gillespie, will give a full account of the work done in his office.

#### MATRON.

By reference to the report of our good Matron you will see the amount of work done in her department

#### PHARMACIST.

The report of the Pharmacist will give the amount of drugs purchased, the amount on hand, and the number of prescriptions filled during the year.

#### DENTIST.

The Dentist's report sets forth an itemized statement of the class and character of work done in the dental department.

### TRAINING SCHOOL.

The Training School is kept up by the Staff and Miss Cross, Superintendent of Nurses, and the usual interest is taken in it.

### RELIGIOUS SERVICES.

The religious services have been regularly conducted when the weather would permit, by our beloved Chaplain, Rev. Lamar Sims. He has buried the dead, and visited the sick when called upon.

### ACKNOWLEDGEMENTS.

We are under renewed obligations to the many friends of the Institution for their liberal donations of papers, books, periodicals, etc., for which we desire to express our thanks in behalf of the patients.

By reference to the Librarian's report you will see a list of these donations, and the names of the contributors.

### ATTENDANTS AND EMPLOYEES.

I fully appreciate the fact that the success of the Sanitarium depends largely upon the loyalty and work of the employees and attendants; hence, it gives me great pleasure to express my great gratitude to all who have discharged the duties of their respective services faithfully and conscientiously.

We are also grateful to the Superintendent of Nurses, Miss Cross, and the Supervisors for the faithful and efficient manner in which they have discharged their respective duties.

### MEDICAL STAFF AND OFFICERS.

I am gratified to say that I believe the Medical Staff is doing better work than they have ever done. They have a Medical Society which meets every month, at which papers are read and discussed. They also have a clinic monthly. Some patient is brought in from some one of the different departments without the knowledge of the others as to his mental and physical condition, and he is examined thoroughly by some member of the Staff who has no previous knowledge of his case; the symptoms, etc., are thoroughly discussed, and a diagnosis formed. This you can readily see must be very beneficial to the entire Staff. I want to

express my gratitude and appreciation to all the officers for the faithful and efficient manner in which they have discharged their duties.

#### CONCLUSION.

In conclusion it becomes my pleasant duty to express my profound gratitude to each member of the Board for the enduring kindness and courtesy they have extended to me, and the hearty support they have given me touching the welfare of the Institution. Your sympathy and encouraging words have really been a benediction to me in many ways.

We begin the duties of another year in the hope that a wise and merciful Providence will guide us in all of the affairs of the institution.

Respectfully submitted,

T. O. POWELL, Superintendent.

## Report of Treasurer.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 1st, 1906.

*Dr. T. O. Powell, Superintendent, Georgia State Sanitarium:*

Georgia State Sanitarium.

MILLEDGEVILLE, GA., April 17, 1906.

This is to certify that Mr. L. H. Andrews, Treasurer, Georgia State Sanitarium, had on deposit in this Bank, subject to check, at the close of business December 30, 1905, Twenty-Four Thousand Six Hundred and Eighty Nine and 08-100 Dollars. (\$24,689 08.)

L. C. HALL, Cashier,

The Merchants &amp; Farmers Bank.

Attest: JNO. T. DAY, N. P., Baldwin Co., Ga.

## Report of Steward.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 1st, 1906.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have again the honor to transmit through you, to our honorable Board of Trustees this my report as Steward embracing the period from January 1st, 1905, to January 1st, 1906.

Abstract "A" shows the overdraft brought forward from last year, the amount drawn from State Treasurer, for support and maintenance, also a classified statement of the disbursements and the balance on hand to be carried forward to next year.

Abstract "B" shows the expenditures on account of Subsistence.

Abstract "C" shows the expenditures on account of Clothing.

Abstract "D" shows the expenditures on account of Fuel and Transportation.

Abstract "E" shows total amount Officers Pay Rolls.

Abstract "F" shows total amount Wages Pay Roll.

Abstract "G" shows the expenditures on account Incidentals.

Abstract "H" shows the expenditures on account of Medical Supplies.

Abstract "I" shows the expenditures on account of Contingencies.

Abstract "J" shows the expenditures on account Stationery and Postage.

Abstract "K" shows the expenditures on account of Special Appropriation for erecting and constructing a system of Water Works.

Abstract "L" shows the requisitions drawn on State Treasurer for Support and Maintenance.

Abstract "M" shows the average number of patients from 1873 to 1906, also the per capita cost per diem and per annum.

Abstract "N" shows the cost of maintaining one patient by the year, month, week and day.

Our Storekeeper, Mr. W. H. Hunter, reports stock on hand \$16,138.35.

Our Apothecary, Mr. D. S. Carrington, reports stock on hand \$2,453.55.

Our per capita per diem is 30 $\frac{1}{4}$ .

By reference to report of Mr. G. W. Hollinshead, Assistant Steward, you will ascertain results from farm, garden, dairies, hogs, etc., also a report of stock, wagons, implements, etc., on hand. In compliance with the law, duplicate vouchers of the expenses accompanied by the required certificate, approved by yourself, and audited by the Trustees, have been filed in the Executive Department in Atlanta.

In closing this report, I am gratified to state that I have enjoyed the full confidence and esteem of our Board of Trustees and yourself as Superintendent. In the discharge of my duties, I have brought to bear every faculty with which I am possessed, to guard well the interest of the entire people, and the comfort and welfare of the inmates of our noble Institution, I am

Very Respectfully,

LUCIUS J. LAMAR, Steward, G. S. S.

## Report of Assistant Steward.

MILLEDGEVILLE, GA., January 1st, 1906.

Mr. L. J. Lamar, Steward:

DEAR SIR—I herewith hand you my report as Assistant Steward for the year 1905, of the Dairies, Garden, Farm, Pork and Transportation. Also statement of stock, wagons, etc., on hand January 1st, 1906. We have lost since our last report 206 head of hogs from cholera, 2 mules and 5 cows, 1 from calving and 4 from unknown causes. The stock are now all in good condition and I think the showing for the year in all the departments, except the pork, very good.

Very respectfully,

GEO. W. HOLLINSHEAD, Asst. Steward.

## Report of Dentist.

GEORGIA STATE SANITARIUM, January 1st, 1906.

*Dr. T. O. Powell, Superintendent:*

DEAR DOCTOR:—The following is a report itemizing the Dental Treatment and Operations of this department during the year 1905.

Alveolar Abscesses treated.....	37
Facial Neuralgia treated.....	2
Periodontitis treated.....	46
Stomatitis treated.....	2
Pyorrhoea Alveolaris treated.....	10
Acute Odontalia treated.....	13
Calcarious deposits removed, number patients.....	105
Pulps Devitalized, removed and cavities and pulp canals filled	89
Putrescent Pulps removed, tooth treated, cavities and pulp canals filled.....	77
Cavities filled with Oxphosphate Zinc.....	259
Cavities filled with Amalgam.....	929
Cavities filled with Gold.....	12
Crowns made.....	5
Crowns Reset.....	2
Artificial Dentures made.....	14
Artificial Dentures repaired.....	8
Hypersensitive teeth from erosion or attrition cauter- ized with Nitrate of Silver, number patients....	9
Teeth cleaned, number patients.....	3
Teeth and roots badly decayed, ulcerative and offen- sive, extracted.....	807
Number of patients during the year.....	1,082

Respectfully submitted,  
J. C. RICHARD, Dentist.

## Report of Apothecary.

---

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., January 1st, 1906.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—The following is my report of the Apothecary Department from January 1st, 1905, to January 1st, 1906.

Being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution, we have done so at all times where it was economy to do so restricting purchases solely to chemicals and such specialties as are required by the physicians.

---

### STATEMENT.

The following is a statement of all expenditures, etc., of the Apothecary Department from January 1st, 1905, to January 1st, 1906.

Amount of drugs purchased, including druggist sundries, dental and laboratory supplies, etc., all preparations for fumigation, disinfecting and sanitary purposes, also all alcohol wines, and whiskies.....	\$3,818 23
Amount of drugs sold officers and employees.....	329 73
Amount of drugs on hand.....	2,453 55
Fixtures, etc.....	385 50
Number of prescriptions filled.....	36,182

Respectfully submitted,

D. S. CARRINGTON, Apothecary.

## Report of Engineer.

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., January 1st, 1906.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have the honor of submitting herewith my report of the workings of this department from January 1st, 1905, to January 1st, 1906.

Respectfully submitted,

T. H. DESAUSSEURE, Engineer.

### IMPROVEMENTS.

The interior finish of the fourth wing of the Cabaniss building including floors, ceiling, plastering, doors, painting, steam heating, plumbing and wiring for electric lights has been completed.

The south court yard of the Cabaniss building has been graded with a fall from the building to carry off the surface water; and six hundred and seventy feet of twelve-inch sewer pipe has been laid through the hill back of that building to take care of such water as falls on the yards.

The down spouts of the unfinished wing of the Whittle building have all been connected to the sewer about that building; five hundred feet of six-inch terra cotta pipe and thirty feet of four-inch cast iron soil pipe being used in that work.

The blow-off pipe header from the boilers of the Twin buildings has been connected to a line of old two and one-half inch pipe and run under ground to a point outside of the yard walls.

All of the wood work of the Infirmary ward of the Whittle building has been painted and finished in white enamel, and fly screens have been put to all doors and windows of that ward, as well as to those of the four office rooms of the Whittle and Cabaniss buildings.

A latticed partition on one side and a lath and plastered one on the other has been placed lengthwise of the sun room of the Infirmary Ward, of the Whittle building, making a dining room on one side and an operating room on the other, with a hallway be-

tween. Electric lights in suitable number for the respective purposes of each room have been placed in position.

The operating room has been supplied with a suitable cabinet, tables, shelving and a sink; and in the dining room a sink has been placed with hot and cold water supply as well as tables, safes, etc.

On Ward 'O' of the Cabaniss building two single rooms have been made into one by cutting out the partition wall between them. Electric light wires have been run into this room and a single 16 c. p. lamp installed.

One cottage has been given two coats of paint on the outside, and five dining rooms have been painted during the year.

Twelve panels of heavy, retaining fence were put up in coal yard of the building for male convalescents.

Two pavillions, one 24x36 and the other 25x40 feet, each with eaves overhanging four feet all around the open sides, were built in the yards of the building for male and female negro patients. These structures are built of wood with open sides, wood floors and shingle roofs, with ventilators in top.

A separate water closet has been put in each of these yards for the use of the patients occupying the pavillions.

Pipes have been run from the main building to the Whittle and Cabiness building and also to the negro building for furnishing drinking water from the artesian well supply.

Four automatic seat-flushing water closets, have been substituted for the old-fashioned ones on Wards 19th and 20th, male.

Three urinals with automatic flush tanks have been put in water closets of 19th, 20th and 21st, male.

Twelve lavatories and six urinals have been put in the Twin buildings.

A duplex steam pump for the proper handling and distribution of artesian water has been purchased and set up in the Engine room of the main building.

A complete survey has been made for the new system of filtration and water works, plans drawn and specifications written. Twenty-four sets of plans and many sets of specifications without plans, were sent out to prospective bidders. A survey has also been made to determine the amount of land purchased for the water works plant.

Two hundred and twenty-four trees, (Water Oaks), have been planted in the yards and about the front of the Whittle and Cabaniss buildings.

Six chicken coops, each nine by fourteen feet, have been built in as many yards of the several buildings.

Six steam (direct) radiators have been placed in the nurses' rooms, of the 8th, 9th, 13th, 19th and 20th Wards, to take the place of the indirect radiators which were removed from the basement in making room for the passage under cover for inmates going to and from kitchen for meals.

Besides the usual repair work the following work has been done:

458 Coffins,	2 Room floors,
139 Boxes for shipping coffins,	1 Closet in apothecary department
330 Perforated wood seats in chairs,	1 Pair of crutches,
130 Cane seats in chairs,	2 Compost mixing boxes,
95 Bed springs placed in beds,	10 Commodes,
650 Chairs repaired,	3 Hopper seats,
45 Tables repaired,	4 Feed troughs,
15 Lounges repaired,	1 Clothes rack,
4 Awnings for windows made,	34 Yard benches,
3 Aprons for mangle,	96 Hoe handles,
15 Carpets put down,	140 Mop handles,
16 Rolls of linoleum put down,	104 Lineal feet of swinging scaffold,
5 Rolls of cocoa matting put down	4 Sets of clothes shelves,
5 Sides of harness leather worked into repairs,	60 Shuck mops,
8 Plow beams,	1 Gate,
2 Bolsters,	8 Bread paddles,
2 Deep wagon bodies for hauling corn,	1 Hominy paddle,
6 Stepladders,	3 Window shelves,
3 Sets of steps,	1 Boat,
28 Voucher boxes,	2 Boat paddles,
6 Lattice doors,	3 Record boxes,
2 Panel doors,	1 Box lounge
9 Tables,	1 Large cabinet with shelving, cupboard and doors,
4 Sink tables,	7 Door frames,
	6 Window frames.

## Report of Matron.

MILLEDGEVILLE, GA., January 27, 1906.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—With thanks to the officers and to my co-workers who have in any way aided me, permit me to submit the enclosed as my report from January 1st, 1905, to January 1st, 1906.

I would add that all repairing has been done for the institution and all scraps and remnants put to good use, and have been properly accounted for through Store Keeper's Office.

## **Report of Chaplain.**

---

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., January 1st, 1906.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—The duties of Chaplain were performed by me from January 1st, to October 20th, 1905. Preaching services every Thursday and Sunday afternoon of each week were held in the Chapel for the patients, and seem to result in much good. These half hour services were not only of some comfort but I believe a real pleasure to most of those who came.

Funeral services were also conducted by me for those who died and were buried in the local cemetery.

With thanks for courtesy from your self and staff, I am

Yours truly,

LAMAR SIMS, Chaplain.

# SIXTY-THIRD ANNUAL REPORT

OF THE

## BOARD OF TRUSTEES

OF THE

# Georgia State Sanitarium.

For the Year Ending December 31st, 1906.

---

MILLEDGEVILLE, GA., January 1st, 1907.

*To His Excellency, Joseph M. Terrell, Governor:*

SIR:—The Board of Trustees of the Georgia State Sanitarium has the honor to submit herewith their annual report for the year ending December 31st, 1906.

The accompanying reports of the Superintendent and other officers will supply you with full details of the year's work.

The Board, through its Committees, has visited the Sanitarium regularly once each month, and has met for the transaction of business once each quarter in the year. A constant oversight has been had of the management. All receipts and disbursements have been carefully audited. Supplies have been prudently bought on competitive bids from samples submitted. The best interests of the State have been constantly studied.

The affairs of the Sanitarium have invariably been found in excellent condition and its records kept squarely up. The Board takes this occasion to express its appreciation of the zeal shown by each of the officers in the discharge of their duties. It gives the Board pleasure to again attest the untiring vigilance of Superintendent Powell in his efforts in behalf of the patients. Georgians have just cause for pride and gratitude in the splendid success of his administration, and in the enviable standing of the Sanitarium among her sister institutions in America.

---

Since the last report of the Board 871 new patients have been received. The total number treated during the year was 3,810.

The daily average under treatment for the year was 2,978. The daily average for 1905 was 2,938, and for 1904, 2,880, making a net increase in the two years of 98 patients.

\$350,390.93 was expended for the support of these patients and the Board now has on hand a balance of \$9,917.55 with which to guard against any emergency which may arise. The annual per capita cost was \$117.68, as against \$113.00 in 1905 and \$121.79 in 1904. The daily per capita cost was .3224 as against .3095 in 1905 and .3328 in 1904. The increased cost over last year will be found principally in the expenditures for clothing, wages and repairs. Such a low cost is made possible only with the aid of the Colony Farm and by the practice of close economy. It means that the patients are deprived of some essentials and of many simple pleasures which would contribute much to their happiness and possible cure.

The new year begins with a scarcity of nurses and employes. The present cost of living and the higher wages being paid everywhere makes the situation serious since the means of the Board does not permit any substantial increase in the present rate of wages paid by it.

The expense of repairs grows heavier from year to year from perfectly natural causes. An even larger sum needs to be expended for the better preservation of the State's extensive property.

The cost of supplies still remains high and will likely continue so.

In view of these things, and to enable it to meet them, the Board is constrained to ask for the support and maintenance of the Sanitarium in 1908 and 1909 approximately as follows:

For 3,078 patients in 1908 the sum of \$393,214.00.

For 3,128 patients in 1909 the sum of \$399,602.00.

Thirty-five cents a day is allowed for the support of each patient in these amounts. The increase in numbers is estimated at fifty annually.

The new waterworks and electric light plant for which an appropriation of \$75,000 was made in 1905 have not been completed. Excessive rains in the summer and difficulties experienced by contractors in securing materials and deliveries promptly have retarded the work. Fortunately the abundant rains furnished plenty of water from the old plant during the summer and no serious inconvenience has been felt thus far. The Engineer estimates that

eighty-eight per cent. of the work on the waterworks is now completed.

The attention of your Excellency is again called to the lack of suitable wards for the isolation and proper treatment of tubercular patients. Of the deaths in the Sanitarium the past year, 128 of them were from this dread malady. The danger to the other patients who must associate with them is constant and growing. The Medical Staff feels this lack most keenly and the strong words of Superintendent Powell on this subject should meet with prompt response. It is estimated that such wards, four in number, can be built and furnished for a total cost of \$15,000.00, and the Board asks for an appropriation of this amount to be made immediately available.

Your attention is also directed to the large number of senile imbeciles and helpless paralytics now being received by the Institution. These two classes do not constitute the slightest danger to society, nor is there the remotest chance of benefitting them here. Other than providing them a home no good object is attained by receiving them, and yet under the present State law the Board has no right to deny them admission while there is room. These classes could in most cases be just as well cared for at home, and this expense to the State saved.

There are two other classes for whom suitable provision should be made elsewhere. Reference is had to the feeble minded children, and to the epileptics who are not insane. An insane asylum is not the place for them and their presence in it is injurious to all three classes. Under the present State law no special provision is made for them and the Board must receive them. Absolutely nothing can be done here for the first, and little for the second class. To the first named a commitment here closes the last door of hope and death must come as a merciful release. They present the saddest of all the sad scenes witnessed in the Sanitarium. It is made the sadder because it is possible to ameliorate their condition. They should be in a Training School, where, amid pleasant surroundings and with proper care, training and treatment, they can be fitted in some measure for usefulness to themselves and others. Such a School should be as separate and distinct an institution as is the Sanitarium.

The Sanitarium now contains about ninety of this class, which number by no means represents the total in the State. Only the grosser types are committed here while the others remain at home, where, unrestrained, unconfined and unprotected they are a danger to society and, where by the propagation of their kind, they aid in keeping the Sanitarium filled. From the standpoint of economy alone, if for no higher and loftier, reason, they should be properly protected and cared for.

The segregation and colonization of epileptics is the modern method of combatting this insidious disease. Out door employment and cottage life present the ideal conditions for their treatment. By the useful and self-helpful labor of its inmates such a Colony can contribute largely to its own support. Experts are now agreed that taken in its beginning much can be done towards a cure. Like the School for the feeble minded such a colony should be separate and distinct from the Sanitarium. About 270 of this class are now in the Sanitarium, all of whom are chronic cases, and who in consequence must remain a charge upon the State as long as they live. Early and proper treatment might have effected a cure and this expense to the State saved. Their proper treatment cannot be given in an insane asylum.

The Board would commend to your Excellency's attention the presentation made by Superintendent Powell on these subjects. His pre-eminent ability and life long experience give to his words weight and meaning. It would be glad to see a Commission created by the General Assembly charged with the duty of inquiring into the need for these institutions in the State, with inspecting similar institutions in other States and of making due report thereon, with such recommendations as it deems proper to the General Assembly.

By the direction of the Board Trustee Brantley, Chairman of the Executive Committee, attended the annual meeting of the American Psychological Association which was held in Boston in May last, and visited a number of insane asylums while enroute. His report to the Board on his return is deemed of sufficient importance to form a part of this report and it is hereto attached.

In conclusion the Board thanks your Excellency for the cordial support and co-operation given it throughout your entire adminis-

tration. Your affectionate interest in the welfare of the afflicted citizens cared for by the Sanitarium has been an inspiration to the members of the Board in the discharge of their duties.

Respectfully submitted,

JOEL BRANHAM, President,  
THOS. G. LAWSON, Vice-President,  
RICHARD JOHNSON, Secretary,  
JAS. B. BAIRD, M. D.,  
CHAS. J. MONTGOMERY, M. D.,  
THOS. M. SWIFT,  
JNO. L. CULVER,  
W. F. BRUNNER, M. D.,  
HENRY BANKS,  
JNO. T. BRANTLEY.

## Report of Superintendent.

For the Year Beginning January 1st, 1906 and Ending  
December 31st, 1906.

---

GEORGIA STATE SANITARIUM, January 1, 1907.

*To the Honorable Board of Trustees, Georgia State Sanitarium:*

GENTLEMEN:—In compliance with the law and rules of the Sanitarium I respectfully submit for your consideration the Sixty-Third Annual Report of the Institution for the year ending December 31st, 1906, together with the reports of the Steward, Treasurer and other officers of the Institution, which I trust will give you a detailed and satisfactory account of the conduct and management of the Sanitarium for the year 1906.

On January 1st, 1906, there were white patients on hand 2,035 and colored 904. There have been received since 539 whites and 332 colored, making a total reception of 871.

There have been discharged, removed, eloped and died 792, leaving in the Institution January 1st, 1907, 3,018 patients, of whom there are 204 whites and 54 colored on furlough, not discharged.

The average number of patients under treatment during the year was 2,978, while the total number receiving treatment was 3,810.

It will be seen that the average number receiving treatment was forty more than last year. We have seventy-nine more patients on hand than at the close of last year.

The statistical tables, which form a part of this report, will give in detail the movement of the white and colored population.

### SUGGESTIONS.

The rules of the Institution require me to make such recommendations as I may deem advisable for the welfare of our unfortunate charge. My apology for pressing the following recommendations from year to year upon the General Assembly is, not only to emphasize the crying necessity for speedy action in making the proper provisions for certain classes of patients sent to this Institution, but should I not do so I feel I would be guilty of criminal neglect

in the discharge of my duty. All of the dictates of Christianity, humanity and civilization demand that there should be some legislation in regard to proper and generous provisions for these afflicted classes. It will be a reflection upon the State not to appreciate their relation and obligation to our helpless wards:

**(1) Separate Wards for Tubercular Patients.**

There should be separate wards or galleries for tubercular cases. It will be necessary in this Institution to have four separate wards or galleries, one each for the white female and male, and one each for the colored female and male. No hospital for the care of the insane is up to date that is not provided with separate department for the isolation of tubercular cases as soon as the disease is detected. It is utterly impossible to treat the disease satisfactorily or successfully in the general wards. They should have plenty of sunlight and air, the best hygienic surroundings, personal attention and nourishment. This cannot be given in the general wards. It should be remembered that our patients are sick mentally, and a large number both mentally and physically with a feeble and an inherited unstable constitution, which makes them very susceptible to tubercular infection. You can readily see that it is impossible to check the spread of this fearfully fatal malady without the isolation of all cases as soon as the disease is detected.

There is a greater per cent of tuberculosis with the insane than with the sane. Our Pathologist reports 48.3 per cent. of active tuberculosis from post mortem investigations. Dr. Naegeli, a distinguished German Pathologist, says that, out of 284 cases he only found six free from tuberculosis.

**(2) Training School for Feeble Minded.**

I visited the training school for feeble minded near Boston, Mass. last spring. It is said to be one of the best in America. I examined the children and heard what improvement they had made, and inquired into the general conduct of the institution. I felt with what pride and gratitude I could look upon such an institution in Georgia doing such noble and humane work for the helpless and dependent. In this school the children were taught or trained to do work of some sort, and they were neat and cleanly in their habits. I understood many, when they came to the school, were untidy. They also had a colony several miles from the main building, which I did not visit but was told they were about self

supporting, being very little expense to the State. Is it not incumbent upon the State of Georgia to provide and care for this dependent class in a way that their condition may be improved before it is too late, and also to protect society? If they are allowed to grow up without any care, and without safeguards being thrown around them, they will intermarry and perpetuate this defective class, for it is a physical impossibility for the children of such marriages to have a perfect mental and physical organism, except, in exceedingly rare cases coming under the head of reversional heredity perhaps skipping a generation or two, but this is so rare it is hardly worth considering. It will be a violation of God's inexorable law for any other results. We are taught in the Holy Book that like will beget like. Is it not then the duty of those blessed with mental integrity to conform with the teachings of the Divine Book in which we are taught that "We then that are strong ought to bear the infirmities of the weak and not to please ourselves," Romans xv and i. We are confronted with these teachings as to what we ought to do in regard to the infirmities or maladies of the weak, and is it not clearly our duty to be obedient to these requirements? The children of such marriages will ultimately become the wards of the State, and when we consider the number in this State, it is very evident that a school should be established for them, so that as many as possible may be made productive powers of the State instead of an expense, and it is of vital importance that the increase of this defective class be checked, which would be, at least to some extent, if they were placed under the care and protection of such a school. We have about ninety in this Institution, and it is utterly impossible to give them the necessary training in a hospital for the insane. The influence from mixing is positively hurtful to both the feeble minded and the insane.

### (3) **Epileptic Colony.**

The epileptics are perhaps neglected more than any other class of the afflicted. Very little attention is given them until the disease becomes chronic and incurable. The most favorable time for successful treatment is, upon the first manifestations of the premonitory symptoms. They are to be pitied and their appeals for help are strong and pathetic. They are shunned by friends, the doors of associates, entertainments of all kinds, and even the door of the church is closed against them. Is it then strange and surprising that they should become irritable and insane under such

circumstances, and ultimately land in a hospital for the insane for life?

If we had a colony in Georgia where they could be employed in various ways systematically, receiving proper attention and diet, which, perhaps, is more beneficial than medical treatment, I think many would go to such colony in the early stages of the disease and be restored to full and complete health, and then, they could go out into the world and be self supporting instead of a burden to the State their entire life.

Epileptics frequently marry. Nothing will result from such marriages but unstable constitutions and defective children.

Dr. William P. Spratling, who has charge of the splendid Craig Colony for epileptics at Sonyea, N. Y., shows good results from the colony plan treatment. In the preface of Vol. 1 and 2, issued by the National Association for the study of Epilepsy and the Care and Treatment of Epileptics, he says that we must do everything possible to lift up these people; we must urge states and communities, and philanthropist of means to build and sustain suitable homes for them; we must teach them trades and study faithfully their extraordinary disease with a view to effecting a greater number of cures. Dr. Spratling further states that the purpose of the above mentioned organization makes it incumbent upon its members to do everything possible for the class, whose appeal for aid is strong and far-reaching.

Dr. Frederick Peterson, a distinguished physician of New York and ex-president of the National Association for the Study of Epilepsy and the Care and Treatment of Epileptics, advocates strongly colonizing all epileptics. I know of no one in America who has more intelligently investigated as to the best care and treatment of epileptics than this distinguished physician, who has seen the good and satisfactory results of systematic treatment on the colony plan.

Dr. M. L. Perry, Superintendent of the Epileptic Colony at Parsons, Kansas, in a plea for early diagnosis and treatment of epilepsy says, if epileptics are sent to a properly arranged colony for their care and treatment, epilepsy, if taken in time, is not so hopeless as it was formerly considered to be. Under the new therapy, however, it is all the more important that treatment be instituted before, by long continued habit, it becomes second nature with the individual.

I fully agree with Dr. Perry that with an early diagnosis and prompt treatment many cases would be restored, while to remain at

home means that they will ultimately become chronic and incurable, perhaps insane, hence it is of vital importance that they have early treatment.

Georgia is far behind many of the other States in providing for the different classes mentioned above. The great State of Georgia cannot afford to be behind any State in providing for her helpless and dependent. To neglect these classes will simply increase the burden of the State with their care, for it will only be a question of time before they will be under the care of the State for life. Such neglect will be a blot and reflection upon our civilization. No epileptic is ever brought to this Institution until the disease is chronic and incurable. We now have in the Institution 272 epileptics, and they will, in all probability, remain during life.

Provision should be made for the feeble minded and epileptics in some other section of the State, and should not be connected with this Institution in any way.

### **Health.**

The general health of the Sanitarium has been as good as could be expected when we consider that there have been under treatment during the year 3,810 patients, many of whom are old and feeble, and totally unable to resist the slightest attack of sickness, and some have been in the Institution for many years. Of the 871 received during the year, suffering from various forms of brain disease, four hundred and seven were chronic and incurable cases, old, feeble, paralytics and tubercular, some in the last stages of the disease and living only a short while after their reception. The reception of such cases simply adds to the large number of chronic cases that have been accumulating in the Sanitarium for many years, and will increase the mortality and diminish the percentage of recoveries.

By reference to the statistical report showing causes of death it will be seen that very few died of curable diseases. The principal causes of death were tuberculosis, paralysis, epilepsy, apoplexy, senility and organic brain disease. We have had no general epidemic during the year, only a few cases of influenza and some slight eruptive cases with the children in the Female Department.

### **Recoveries.**

The recoveries are calculated upon the number received during the year. Of the 871 admitted, 407 were regarded as chronic and

incurable. The percentage of recoveries was 30.3, which is a fair percentage considering the large number of incurables received.

### **Reception of Patients.**

All patients, who are not too feeble, are placed upon the reception wards when admitted. Dr. Mobley is in charge of the white female reception ward; Drs. Green and Swint are in charge of the white male; Dr. Walker of the colored female and Dr. Longino of the colored male. A thorough examination is made of every organ in the body, if their condition will justify it, together with a mental examination, and, if necessary, the sputum, blood and urine is sent to the Laboratory and the analysis is filed with the history made by Ward Physician. There is a history of the case sent with the patient from home, but this history is generally imperfect and useless.

Those that are too feeble are sent to the Infirmary Wards on reception.

The nurses make notes for ten days of the pulse, temperature, amount of urine passed each day, their habits, conversation and general conduct so that the physician in charge of the ward can see if the patient entertains, delusions, hallucinations, or illusions, and the notes, together with the general conduct of the patient, will assist the physician greatly in forming a correct diagnosis as to what form of psychosis patient is suffering with.

The following example will indicate the character of the mental and physical examination, and the nurse's notes will give a detailed account of their observations from day to day.

### **Mental and Physical Examination.**

Date of admission Feb. 19, 1906; Name, (white female); Age 38; Sex, W. F.; Weight, 115; Height, 5 ft. 3 in.

#### **PRESENT STATE.**

Violent, No; Dangerous, No; Destructive, No; Homicidal, No; Suicidal, No; Nutrition, Good; Articulation, Normal; Facial Expression, Confused; Excited at times; Melancholy, No.

Mental State—Delusions, Various; Illusions, No; Hallucinations, Yes.

Habits—Cleanly, Yes; Untidy, No.

Motor Functions—Eyes, Normal; Face, Normal; Trunk, Normal; Arms, Normal; Inf. Extremities, Normal.

Convulsive Seizures, None; Gait, Normal.

Cutaneous Sensation—Tactile, Normal; Heat, Normal; Cold, Normal; Pain, Normal.

Secretion—Cutaneous, Normal; Glandular, Normal.

Reflexes—Patella, Is slightly exaggerated; Angle clonus, Absent; Superficial, —

Special Senses—Hearing, Good; Eyesight, Good.

Reaction of Pupils, Normal in size, reacts normally to light and accommodation.

Tropic Disturbances—Skin, Normal; Muscles, Normal; Bone, Normal; Hair, Normal.

Circulatory System—Pulse, 100 regular volume good; Arteries, Soft; Heart, Apex beat normal in position, area and force. Heart beats normal.

Respiratory System—Nose, Normal; Mouth, Normal; Lungs, Chest is broad and full, expansion good and uniform; percussion note and breath sounds normal.

Sphincters—Anal, Normal; Vesicle, Normal.

Genito-Urinary System—The abdomen is soft, rather full, non sensitive. Liver comes two fingers breadth below costal border. Spleen normal in size, non sensitive. The externals genitals are normally formed. The Vagina admits one finger; cervix presents well up; the Uterus is not freely movable, is retroverted to slight degree. Ovaries not palpatated but ovarian region appears to be clear.

Remarks—Examination not satisfactory on account of patient resisting.

Diagnosis—Manic depressive insanity.

### **Nurse's Notes on New Cases.**

Name, (White Female). Admitted, Feb. 19, 1906.

20. First Day—Temperature; resisted; excited; appetite poor; one movement of bowels; voided urine three times; normal quantity and color; slept very well.

21. Second Day—Ax. Temperature; resisted; excited; delusional; appetite poor; no movement of bowels; voided urine three times, normal quantity and color; slept very well.

22. Third Day—Ax. Temperature, 98; pulse, 90; respiration, 20; excited; delusional; appetite poor; no movement of bowels; voided urine four times, normal quantity and color; slept very well.

23. Fourth Day—Ax. Temperature, 98; pulse, 84; respiration, 20; excited; delusional; appetite improving; no movement of

bowels; voided urine three times, normal quantity and color; slept well.

24. Fifth Day—Ax. Temperature, 98; pulse, 72; respiration, 20; excited; delusional; appetite good; one movement of bowels; voided urine three times, normal quantity and color; Slept very very well.

#### HISTORY.

Has never borne any children. Date of first symptoms this attack three weeks ago. Symptoms of insanity were manifested by continual talking, whispering and singing. Probable cause not known. Has had one attack six years ago, duration 18 months. At one time took morphine for six months. Is not violent, destructive nor filthy. Not any hereditary disease mentioned.

Feb. 24th. Patient says she is at the Georgia State Sanitarium but is not in any way insane, but came here at the command of the President, and he sent her here to establish the truth of Mental Telepathy, says it is the intelligence of two sympathetic minds which convey thoughts to each other, and those peculiar mental pictures which nobody can explain are to be called figments of the brain. She will not answer to her name but says she is the wife of Dr. R. A. Patterson, of ———— Says they have been married since she was fifteen, and she is now 37. She will sit for hours at a time laughing, whispering and talking, as though she was communicating with some one, and if spoken to or asked a question during that time she has to get permission from the person with whom she is talking before she will answer any question, and then she will converse very intelligently for a few minutes and then begin talking to those imaginary people again. She says she can talk to her husband or anybody she wishes to at any time, matters not where they are, and they repeat everything she says. She pats her foot all the time she is talking, says she is keeping time and it helps her to remember things better to have her feet in motion.

#### Pathologist.

By reference to the report of our faithful and efficient Pathologist you will see the important work done in that Department for the past ten months. No hospital for the insane is fully equipped without a Pathologist and the best scientific work cannot be done. It is to the Pathologist we must look for light and guidance in the

diagnosis and treatment of many cases and the leading factors in the causation of the malady. The scientific investigations of the Pathologist show that there is much more renal trouble with the insane than with the sane. You can readily see how important it is to both the physician and the patient to have the urine, sputum, blood, etc., examined by the Pathologist. It gives light and information that is absolutely necessary for the proper treatment of many cases, without which we would be frequently working in the dark.

### **Dentist.**

The Dentist's report will show a detailed account of the work done in that Department. The Dentist has been faithful and attentive to duty.

### **Pharmacist.**

The report of the Pharmacist will show you in the detail the amount of drugs purchased during the year; the number of prescriptions filled, and the amount of drugs now on hand.

### **Finances.**

The finances of the Sanitarium have been economically managed by the good business men of the Finance Committee and our faithful Steward, which will be shown by his report. The percapita cost of each patient per day was .3224, which is very low considering the advance in cost of all supplies for the institution, and also the advance in wages.

### **Assistant Steward.**

The report of the Assistant Steward will give a full and complete statement of the results of the dairies, farm and garden, also the amount of pork raised. The total amount from these various departments show a clear profit above all expenses of \$16 901.18. I am glad to say that the Colony, in the Piney Woods, continues to be a success mentally, physically and financially.

### **Storekeeper.**

The Storekeeper's report gives a full and detailed statement as to the work that has been done in that Department for the past twelve months. It shows all the goods received, the amount issued and to whom, also the amount on hand.

### **Book-keeper.**

The report of the Book-keeper will show the work done in his office. Mr. Gillespie, the book-keeper, also has charge of the laundry, which is a very trying but important position.

### **Employment and Amusements.**

The amusements are kept up as usual under the supervision of Dr. J. M. Whitaker, First Assistant Physician, who takes the same lively, active interest and endeavors to make them pleasant to all.

The patients generally are employed in the various departments of the Sanitarium where it can be done by encouragement, but never by force. This is done for the improvement of their mental and physical condition.

Many of the patients play baseball, which not only gives them diversion and exercise, but makes them better contented.

### **Acknowledgments.**

We are under renewed obligations to the many friends of the Sanitarium for generous contributions to the Sanitarium Library for the benefit of the patients, which gives them much pleasure. Such donations are a blessing to many and are fully appreciated. It brings light and comfort to many by leading their minds from morbid states to more cheerful subjects.

By reference to the Librarian's report you will see a list of these donations, and the names of the contributors.

### **Matron.**

The report of our excellent Matron will give you a full and complete account of the work done in her Department.

### **Repairs and Improvements.**

This has been a very busy year. The report of the Engineer, Capt T. H. DeSaussure, gives an accurate statement of everything done in his Department.

### **Religious Services.**

Religious services were conducted on Sunday and Thursday afternoons of each week by the Chaplain, Rev. J. T. Daves. The congregations generally were large and the conduct good. The Chaplain buried the dead and visited the sick when advised to do so.

**Attendants and Employees.**

All attendants and employees who have been faithful in the discharge of their duty have my sincere thanks. I am also under obligations to Miss Cross, our efficient Superintendent of Nurses; Miss McCoy, Supervisoreess; also to the Supervisors of the Male Department for the faithful service they have given the Institution.

**Medical Staff and Officers.**

To the Medical Staff and all Officers I am under great obligations for their inflexible fidelity to duty, especially during my long continued sickness and their anxiety to have everything move on smoothly and prevent any worry in any way to me. I know of no institution in which the medical staff is doing better work.

**STATEMENT—WHITE.**

**Conclusion.**

To you gentlemen of the Board it is with profound gratitude that I express my appreciation for the interest you have taken in the welfare of the Institution, and the aid and co-operation you have given me in the discharge of duties. Your forbearance and kindness during my long sickness will ever be fresh and gratefully remembered by me.

We begin the duties of the New Year invoking the guidance of a wise and merciful Providence in conducting the affairs of the Institution.

Respectfully submitted,

T. O. POWELL, Superintendent.

## Report of Pathologist.

GEORGIA STATE SANITARIUM, JANUARY 1., 1907.

*Dr. T. O. Powell, Superintendent.*

DEAR SIR:—I have the honor to submit herewith a report of the work done in the Pathological Department for the ten months from March 5th, 1906 to January 1st, 1907. The general plan of work has been the same as that followed heretofore, attention being devoted especially to Clinical Microscopy. There has been done a considerable amount of clinical work which, from its miscellaneous character, cannot be detailed in such a report.

Thirty-five autopsies have been done; the more important data of each being given below in tabular form. (See Table No. 1.) Several gross specimens have been added to the Museum. Some of the laboratory equipment has been repaired, and some which was worn out, replaced.

I desire to express my thanks for your uniform kindness and encouragement shown me in the work of this department.

Very respectfully,

R. V. LAMAR,

Pathologist.

TABLE No. 1.

SYNOPSIS OF PROTOCOLS OF AUTOPSIES.

Case No.	Race	Sex	Age	Mental Diagnosis	Section Hours After Death	Anatomical Diagnosis
342	C	M	35	Mania, chronic.	3	Pulmonary tuberculosis with cavity formation; chronic fibrous pleuritis. Tuberculosis of liver and of intestines. Atheroma of aorta.
343	C	M	36	Mania, chronic.	1½	Atheroma of aorta and coronary arteries; chronic valvular endocarditis; chronic fibrous myocarditis. Pulmonary tuberculosis with cavity formation; pulmonary miliary tuberculosis; caseous and gelatinous pneumonia. Tuberculosis of bronchial glands, of spleen, liver, and intestines.
344	C	M	60	Dementia, terminal.	16	General arterio-sclerosis; atheroma of coronary arteries; chronic valvular endocarditis; chronic fibrous myocarditis. Chronic diffuse nephritis. Hypostatic pneumonia. Healed pulmonary tuberculosis.
345	C	M	45	Dementia, primary.	3	Chronic fibrous myocarditis. Broncho-pneumonia; acute sero-fibrinous pleuritis. Acute splenic tumor. Cloudy swelling of liver. Healed pulmonary tuberculosis.

TABLE No. 1.—Continued.

## SYNOPSIS OF PROTOCOLS OF AUTOPSIES.

Case No.	Race	Sex	Age	Mental Diagnosis	Section Hours After Death	ANATOMICAL DIAGNOSIS.
346	C	M	77	Epilepsy.	4	Atheroma of coronary arteries; chronic valvular endocarditis; chronic fibrous myocarditis. Chronic passive congestion of viscera. Chronic fibrous pleuritis. Acute serofibrinous peritonitis. Hypostatic pneumonia. Atrophy of spleen.
347	W	M	45	Demetia, terminal.	2½	Sclerosis and atheroma of cerebral arteries. Atrophy of left optic nerve.
348	C	M	32	Epilepsy.	2	Sclerosis of coronary arteries. Chronic diffuse nephritis. Broncho-pneumonia; acute splenic tumor; cloudy swelling of liver. Catarrhal gastroenteritis. Dislocation of left shoulder joint (unreduced.)
349	C	M	31	Melancholia, acute.	5½	Pulmonary tuberculosis with cavity formation; caseous and gelatinous pneumonia; tuberculosis of bronchial glands. Chronic fibrous pleuritis. Chronic diffuse nephritis. Catarrhal enteritis; ulcerative colitis.
350	C	F	60	Dementia, senile.	2½	General artero-sclerosis; atheroma of aorta; chronic valvular endocarditis. Brown atrophy of heart. Chronic passive congestion of viscera. Chronic fibrous pleuritis. Acute fibrinous pleuro-pericarditis. Chronic diffuse nephritis.
351	C	M	29	Epilepsy.	8	Chronic pulmonary tuberculosis with advanced sclerosis; chronic fibrous pleuritis. Acute parenchymatous nephritis. Congestion and oedema of lungs.
352	C	F	68	Demetia, senile.	13	General artero-sclerosis; chronic valvular endocarditis; chronic fibrous myocarditis. Chronic diffuse nephritis. Tuberculosis of spleen and liver. Chronic perihepatitis. Tuberculous peritonitis. Chronic interstitial pancreatitis. Healed pulmonary tuberculosis; emphysema. Atrophy of spleen. Fibro-myoma of uterus.
353	C	M	69	Dementia, terminal.	4½	General artero sclerosis; cardiac hypertrophy; chronic passive congestion of viscera. Pulmonary emphysema. Hypostatic congestion of lungs; atelectasis. Hydrocele.
354	C	M	25	Mania, acute.	4½	Acute pneumonic phthisis with cavity formation; acute tuberculous pleuritis. Chronic passive congestion of viscera.
355	C	F	30	Imbecility.	15	Chronic pulmonary tuberculosis with cavity formation; tuberculous pleuritis. Fatty degeneration of liver. Anomaly of pulmonary valve.
356	C	M	33	Idiocy.	6	Broncho-pneumonia; atelectasis. Acute fibrinous pleuritis. Acute splenic tumor. Peri-orbital cellulitis; operation wound.
357	C	F	15	Imbecility.	1½	Pulmonary tuberculosis with cavity formation; chronic fibrous pleuritis; tuberculosis of bronchial glands. Chronic diffuse nephritis.
358	C	M	45	Paresis	2	Chronic meningo-encephalitis. External hydrocephalus.
359	W	M	61	Dementia, terminal.	15	Sclerosis of coronary arteries. Chronic passive congestion of viscera; senile atrophy. Chronic diffuse nephritis (right.) Renal phthisis (left.) Chronic fibrous pleuritis. Healed pulmonary tuberculosis; calcification of lymph glands.

TABLE No. 1.—Continued.  
SYNOPSIS OF PROTOCOLS OF AUTOPSIES.

Case No.	Race	Sex	Age	Mental Diagnosis	Section Hours After Death	ANATOMICAL DIAGNOSIS.
360	W	M	24	Epilepsy.	16	Cardiac hypertrophy and dilatation; chronic passive congestion of viscera. Splenic infarction. Chronic diffuse nephritis. Pulmonary oedema.
361	C	F	60	Melancholia, chronic.	3	Sclerosis and atheroma, cerebral arteries; Cerebral softening—cyst formation.
362	C	M	31	Imbecility.	10	Chronic pachymeningitis—bone formation. Chronic parenchymatous nephritis. Hypostatic congestion and oedema of lungs. Anasarca. Apical pulmonary tuberculosis.
363	C	F	65	Melancholia, acute.	25	Chronic diffuse nephritis. Chronic fibrous pleuritis, perihepatitis, and perisplenitis.
364	C	F	46	Melancholia, chronic.	1½	Chronic valvular endocarditis. Acute vegetative endocarditis. Thrombosis of pulmonary artery (left.) Acute perityphilitis. Chronic diffuse nephritis (left.) Chronic interstitial ovaritis. Carcinoma of uterus, with loss of cervix, and extension to bladder, rectum, and perinaeum; hydronephrosis; perineal fistulae.
365	C	F	36	Dementia, terminal.	9	Chronic valvular endocarditis; chronic passive congestion of kidneys. Chronic ulcerative stomatitis. Exfoliative dermatitis.
366	C	M	37	Epilepsy.	8	Sclerosis of cerebral arteries; cerebral softening yellow. Internal hydrocephalus; Oedema of pia mater.
367	W	M	49	Dementia, terminal.	12	Sclerosis of coronary arteries; Chronic valvular endocarditis; chronic fibrous myocarditis. Chronic fibrous pleuritis. Chronic diffuse nephritis. Acute splenic tumor. Healed pulmonary tuberculosis.
368	C	F	34	Mania, chronic.	11½	Chronic fibrous pleuritis, perihepatitis, and perisplenitis. Chronic diffuse nephritis. Ulcerative colitis. Healed pulmonary tuberculosis.
369	C	F	30	Dementia, organic.	12	Atheroma of cerebral arteries. Internal hydrocephalus. Oedema of pia mater. Depression of calvarium; atrophy of cortex.
370	C	M	66	Melancholia, chronic.	8	Sclerosis and atheroma of coronary arteries; chronic fibrous myocarditis; Pulmonary tuberculosis; tuberculosis of bronchial glands. Chronic diffuse nephritis. Bronch-pneumonia. Pulmonary emphysema. Atrophy of spleen. Non-decent of right testicle. Scar from operation would in scrotum; left testicle wanting.
371	C	M	22	Melancholia, acute.	8	Pulmonary tuberculosis; gelatinous pneumonia; chronic tuberculosis of spleen, liver, kidneys and lymph glands. Acute parenchymatous nephritis. Hydrothorax; hydropericardium.
372	C	M	46	Dementia, secondary.	4	Sclerosis of coronary arteries; chronic fibrous myocarditis. Chronic fibrous pleuritis. Pulmonary tuberculosis; chronic tuberculosis of peritoneum, spleen, liver, kidneys, and lymph glands. Chronic diffuse nephritis. Chronic passive congestion of viscera. Ascites.
373	C	F	22	Imbecility.	3	Brain, cord, and peripheral nerves examined. No gross lesions.
374	C	M	40	Melancholia chronic.	¾	Lobar pneumonia—grey hepatization. Bronch-pneumonia; acute splenic tumor. Cloudy swelling of liver. Dilatation of heart.

TABLE No. 1.—Continued.  
SYNOPSIS OF PROTOCOLS OF AUTOPSIES.

Case No	Race	Sex	Age	Mental Diagnosis	Section Hours After Death	ANATOMICAL DIAGNOSIS.
375	C	M	35	Dementia, secondary.	18	Atheroma of aorta; chronic valvular endocarditis. Chronic fibrous pleuritis. Lobar pneumonia; acute sero-fibrinous pleuritis; acute fibrinous pericarditis.
376	W	F	58	Dementia, primary.	3	Pulmonary tuberculosis; chronic tuberculosis of liver and kidneys. Chronic fibrous pleuritis. Chronic diffuse nephritis. Dilatation of stomach. Ulcerative Enteritis

### Tuberculosis.

Of twenty-nine complete autopsies, fourteen, or forty eight and three tenths per cent. showed active tuberculosis. Of the remaining fifteen, four showed evidences of healed pulmonary tuberculosis. Of those showing active tuberculosis the condition was limited to the lungs, or lungs and pleurae in seven; in the remaining seven there was involvement of other organs.

### Arterial Disease.

Sclerosis and theroma were present in seventeen out of thirty five cases, 48.6 per cent. This percentage is somewhat lower than the average given in heretofore, very probably on account of the relatively greater number of young patients. In several cases the artero-sclerosis was especially marked in the vessels of the brain. Sclerosis of the valves of the heart and chronic fibrous myocarditis were present in an equal number of cases.

### Nephritis.

Nineteen of twenty nine cases, or sixty five and one half per cent. showed evidences of nephritis. This percentage is about the same as that returned heretofore. In two cases, viz: 351 and 371, the lesion was of the acute parenchymatous variety; in one, viz: 362, of the chronic parenchymatous variety, and in the remaining sixteen the condition was diffuse.

\* \* \* \* \*

### Urine.

The routine examination consists of the usual physical tests, chemical tests for serum albumin, sugar (when specific gravity is 1025 or higher), and the microscopical examination of the sediment obtained by centrifugalization. Of such examinations there have been made 611, mainly entrance examinations, the results

of which are presented in tabular form below (Table 2.) Bearing in mind the fact that in the majority of instances the urine of a given case was examined only once, that the presence of serum albumin and casts, either singly or conjointly, is by no means positive evidence of nephritis, and finally that nephritis of the pathologist and Bright's disease of the clinician are not one and the same thing, the necessity for the compilation of elaborate tables from the uranalysis records has not appeared.

TABLE No. 2.

## Synopsis of Uranalyses.

Total number of specimens examined.....	611
Number showing neither albumin, nor casts, nor organized sediment.....	211
Number showing serum albumen.....	361 (59.08%)
Number showing serum albumin without casts.....	217
Number showing casts.....	183
Number showing casts without albumin.....	39
Number showing both albumin and casts.....	144 (23.6%)

TABLE No. 3.

Showing the microscopical findings in 190 specimens which showed albumin without casts.

Total number.....	190
Blood cells were present in.....	19
Pus cells were present in.....	49
Blood and pus cells were present in.....	26
No organized sediment was present in.....	96

**DIAZO REACTIONS:** Sixty five specimens of urine have been examined for Ehrlich's diazo reaction for two purposes, viz: to aid in the diagnosis of suspected cases of typhoid fever, and to aid in the forming of a prognosis in cases of tuberculosis. Twenty nine examinations fall within the first class. Of these fourteen gave positive results; fifteen negative. In the second class there were thirty six examinations, of which, five gave positive results and thirty one negative.

Besides the examinations the results of which are given above, there have been made a number of qualitative tests for indican, acetone, bile pigments, methemoglobin, etc., as well as quantitative determinations of urea, uric acid, chlorides, glucose, etc.

**Blood.**

The following examinations have been made: for malarial organisms, 49. Of these, fourteen gave positive results; thirty five, negative. In the positive cases there was found a single tertian

infection eight times; double tertian, twice; aestivo-autumnal, four times.

Ten numerical counts and haemoglobin estimations, and seventeen differential counts were made, mainly in cases of helminthiasis.

GRUBER-WIDAL REACTIONS: Only serum is used, the dilution being usually one to forty, and time limit one hour and thirty-minutes, the test being carried out microscopically. The results have been reported either "positive" or "negative," the so-called "doubtful reactions" not being considered.\* Seventeen tests for the reaction were made. Of these, seven were positive, ten negative. In only one case, which was not typhoid fever, was the result positive. This was the case of a negro male first suspected of having typhoid fever, later shown to have miliary tuberculosis (Autopsy No. 371). At first both the diazo and the Gruber-Widal reactions were absent, later when the clinical course and symptoms did not yet warrant a diagnosis of tuberculosis both were present and well marked.

### Sputum.

One hundred and thirty six examinations were made, one hundred and twenty eight for *Bacillus tuberculosis*, and eight for the *Pneumococcus*. Of the 128 specimens examined for *Bacillus tuberculosis*, 25 were positive, 103 negative (percentage of positive results 20). This may at first sight seem rather low, but when it is considered that in the majority of cases the sputum was obtained from cases in which an early diagnosis was attempted it will be seen to agree with the results usually obtained. Of eight specimens examined for *Pneumococcus* the organism was present in numbers in all.

### Feces.

Thirty specimens were examined, 26 for animal parasites or their ova, and four for *Bacillus tuberculosis*. Of the latter all were negative. Of the former, 14 examinations gave positive results, and 12, negative. In the positive cases there were found:

<i>Amoebæ dysenteriae</i> .....	2 times
Ovo of <i>Uncinaria americana</i> .....	8 "
Ova of <i>Ascaris lumbricoides</i> .....	3 "
Rhabditiform embryos of	
<i>Strongyloides intestinalis</i> .....	2 "
Ova of <i>Trichocephalus trichiuris</i> .....	3 "

## Report of Dentist.

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., Jan. 1st, 1907.

*Dr. T. O. Powell, Superintendent:*

DEAR DOCTOR:—The following is a report itemizing the Dental Treatment and Operations of this department during the year 1906.

Alveolar Abscesses treated.....	40
Periodontitis treated.....	23
Stomatitis treated .....	3
Pyorrhoea Alveolaris treated .....	10
Acute Odontalia treated .....	14
Calcarious deposits removed. Number of patients.....	81
Pulps devitalized, removed and cavities and pulp canals filled.....	83
Putrescent pulps removed, tooth treated, cavities and pulp canals filled	97
Cavities filled with Oxphosphate Zinc.....	294
Cavities filled with Amalgam.....	598
Cavities filled with Guttapercha .....	3
Cavities filled with Gold.....	2
Crowns made.....	8
Crowns reset.....	2
Bridges made.....	2
Bridges reset.....	1
Artificial dentures made.....	7
Artificial dentures repaired .....	7
Hypersensitive teeth from erosion or attrition cauterized with	
Nitrate of Silver .....	8
Teeth cleaned. Number of patients .....	9
Teeth and roots badly decayed, ulcerative and offensive, removed ..	1208
Number of patients during the year .....	1216

I visit the wards in numerical order, examine the mouth of each patient and render such services as are feasible.

Respectfully submitted, "

J. C. RICHARD, Dentist.

## Report of Apothecary.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—The following is my report of the Apothecary Department from January 1st, 1906, to January 1st, 1907.

It being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution, we have done so at all times where it was economy to do so, restricting purchases to chemicals and such specialties as were required by the physicians.

### STATEMENT.

The following is a statement of all expenditures, etc., of Apothecary Department from January 1st, 1906, to January 1st, 1907.

Amount of drugs purchased, including all druggists sundries, dental and laboratory supplies, etc., all preparations for fumigation, disinfecting and sanitary purposes, also all alcohol wines and whiskies.....	\$ 3,192 67
Amount of drugs sold officers and employees.....	332 40
Amount of drugs on hand .....	2,635 50
Fixtures, etc .....	385 50
Number of prescriptions filled .....	46,133

Respectfully submitted,

D. S. CARRINGTON, Apothecary.

## Report of Treasurer.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 1st, 1907.

*Dr. T. O. Powell, Superintendent, Georgia State Sanitarium:*

MY DEAR SIR:—I beg to submit herewith the Receipts and Disbursements of my office as Treasurer for the fiscal year.

### SUPPORT AND MAINTENANCE.

## THE MERCHANTS AND FARMERS BANK.

MILLEDGEVILLE, GA., December 31, 1906.

In account with L. H. ANDREWS, Treasurer.

Georgia State Sanitarium

1906		
Dec. 31.	Balance to credit.....	\$ 37,890 94

This is to certify that L. H. Andrews, Treasurer, Georgia State Sanitarium, had on deposit in this Bank, subject to check at the close of business December 31st, 1906, Thirty-Seven Thousand Eight Hundred and Ninety and 94-1000 Dollars. (\$37,890 94.)

[Signed] L. C. HALL, Cashier.

Merchants &amp; Farmers Bank.

Attest: JNO. T. DAY, N. P., Baldwin Co., Ga.

Respectfully submitted,

L. H. ANDREWS, Treasurer.

Georgia State Sanitarium.

## Report of Steward.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 1, 1907.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have again the honor to transmit through you, to our honorable Board of trustees this my report as Steward embracing the period from January 1st, 1906, to January 1st, 1907.

Abstract "A" shows the balance brought forward from last year, the amount drawn from the State Treasurer, for the support and maintenance of the Sanitarium, together with a classified statement of the disbursements, also the balance on hand to be carried forward to the next year.

Abstract "B" shows the expenditures on account of subsistence.

Abstract "C" shows the expenditures on account of clothing.

Abstract "D" shows the expenditures on account of fuel and transportation.

Abstract "E" shows total amount officers pay rolls.

Abstract "F" shows total amount wages pay roll.

Abstract "G" shows the expenditures on account of incidentals.

Abstract "H" shows the expenditures on account of medical supplies.

Abstract "I" shows the expenditures on account of contingencies.

Abstract "J" shows the expenditures on account of stationery and postage.

Abstract "K" shows the expenditures on account of Special Appropriation for water works.

Abstract "L" shows the requisitions drawn on State Treasurer for support and maintenance.

Abstract "M" shows the average number of patients from 1873 to 1907, also the per capita cost per diem and per annum.

Abstract "N" shows the cost of maintaining one patient by the year, month, week and day.

Our Storekeeper, Mr. W. H. Hunter, reports stock on hand \$15,048.77.

Our Apothecary, Mr. D. S. Carrington, reports stock on hand \$2,635.50.

Our percapita per diem is 32 24-100.

By reference to the report of Mr. G. W. Hollinshead, Assistant Steward, you will ascertain results from farm, garden, dairies, hogs, etc., also a report of stock, wagons, implements, etc., on hand. In compliance with the law duplicate vouchers of the expenses, accompanied by the required certificate, approved by yourself, and audited by the Trustees, have been filed in the Executive Department in Atlanta. I have devoted my entire time as required by the rules of the Institution to the Stewards work, and have to the best of my ability discharged the duties incumbent upon me.

I feel deeply grateful for the continued confidence of our Board of Trustees, as well as that of yourself.

Very Respectfully,

LUCIUS J. LAMAR, Steward, G. S. S.

#### ABSTRACT "A."

Shows the balance brought forward from last year, together with all the money received, with a classified statement of the disbursements from January 1st, 1906, to January 1st, 1907.

## Report of Assistant Steward.

NEAR MILLEDGEVILLE, GA., January 1, 1907.

Mr. L. J. Lamar, Steward:

DEAR SIR:—I herewith hand you my report as Asst. Steward for the year 1906, of the Dairies, Garden, Farm, Pork and Transportation. Also statement of stock, wagons, etc., on hand January 1, 1907. We have lost since our last report from unknown causes, 7 head of cattle. The stock are all in very good condition.

Very Respectfully,

GEO. W. HOLLINSHEAD, Asst. Steward.

## Report of Engineer.

GEORGIA STATE SANITARIUM,

MILLEDGEVILLE, GA., Jan. 1st, 1907.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have the honor of submitting herewith my report of the workings of this department from January 1st, 1906, to January 1st, 1907.

Respectfully submitted,

T. H. DESAUSSEURE, Engineer.

### IMPROVEMENTS.

Ever since the addition of the annexes to the negro building the hot water apparatus for that building has been insufficient in capacity. This condition has now been improved by the addition of a Kewanee water heater.

The old and defective water heater at the hospital has been replaced by a new one.

One hundred and thirty-eight oaks, twelve silver maples and sixteen pecan trees have been planted about the grounds of the institution.

Nineteen corrugated rubber treads have been placed on the winding stair of the center building.

A spur track of nearly three hundred feet in length has been built by the Georgia Railroad Co. from its main line to the new water works plant.

A five room cottage has been built for the engineer at the water works.

A telephone line has been run from the end of our pole line in Milledgeville to the new water works at the river and two telephones placed, one at the pumping station and the other in the engineer's cottage.

Four thousand and fifty-four feet of 12 inch water main has been taken up from the old water works plant and relaid as a part of the pipe line from the new works. We have also laid four hundred and thirty-two feet of new 12 inch pipe on this line.

The fire fighting apparatus has been improved by the addition of nine hundred feet of 2½ inch hose and two play pipes fitted with Callahan shut off nozzles.

One water closet and connecting sewer has been put in at one of the cottages.

A line of 1 4-5 miles has been surveyed between the state's property and adjoining owners for the purpose of locating a fence line.

The work of rehabilitating the main kitchen has been begun. A new ventilator, the entire length of the building, has been put in the roof. All of the overhead work has been ceiled and painted. The walls have been chopped and made ready for the plastering, and some two thousand of the enameled brick of the wainscoting laid.

The new Water Works for which the legislature of 1905 made an appropriation is under construction. Much of the work has been done and we hope soon to have it in operation.

In each of the four yards at the Twin building there has been put a four-seat open water closet made of brick and cement and furnished with dumping devices for cleaning them out. Sewers have been run from each of them to the main sewer.

Besides the usual ordinary repair work about the institution the following has been done in the shops:

383 Coffins.

158 Boxes for shipping coffins.

600 Square feet of flooring.

4 Bakers peels.

1 Heavy oak top chopping block table.

3 Chicken coops.

15 Lattice doors.

96 Hoe handles.

12 Medicine cases.

14 Commodes.

6 Wagon crates for hauling straw.

2 Laundry paddles.

5 Step ladders.

6 Dining tables.

5 Dumping tanks.

663 Chairs repaired.

4 Mangle aprons made.

2 Handles for scrub brushes.

56 Tables repaired.

- 167 Cane seats put to chairs.
- 62 Repairs made to sets of harness.
- 2 Carriage aprons made.
- 10 Hamestrings made.
- 5 Window awnings made and put up.
- 331 Wood seats, perforated, put to chairs.
- 5 Sets of shelving made and put up.
- 3 Breast straps made.
- 4 Carpets put down.
- 58 Bed springs repaired.
- 6 Safes repaired.
- 49 Window shades put up.
- 1 Screen repaired.
- 55 Bureaus put together.
- 2 Wagons covered.
- 2 Litters covered.
- 3 Window curtains put up.
- 1 Crutch repaired.
- 1 Pair of reins made.
- 1 Bridle made.

## Report of Matron.

MILLEDGEVILLE, GA, Jan. 1st, 1907.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—With thanks to the officers and to my co-workers, who have in every way aided me, permit me to submit the enclosed as my report from Jan. 1st, 1906; to Jan. 1st, 1907.

I would add that all repairing has been done for the institution and all scraps and remnants put to good use, and have been properly accounted for through Storekeeper's Office.

MRS. J. M. DARNELL, Matron.

## Report of Chaplain.

GEORGIA STATE SANITARIUM,  
MILLEDGEVILLE, GA., January 1, 1907.

*Dr. T. O. Powell, Superintendent:*

DEAR SIR:—I have served as Chaplain of the State Sanitarium from October 20th, 1905 to November 1st, 1905. During that time I held services regularly every Sunday and Thursday afternoon. The attendance was good and the attention of the patients marked. The services seemed to be profitable to the hearers.

I conducted funeral services for the white dead who were interred in the cemetery of the Sanitarium. The number of such services conducted by me was approximately 100.

Respectfully yours,

J. T. DAVES, Chaplain.

## Report of John T. Brantley.

---

MILLEDGEVILLE, GA., December 31, 1906.

*Judge Joel Branham, President, Board of Trustees, Georgia State Sanitarium, Milledgeville, Ga.*

MY DEAR SIR:—By your appointment, in accordance with the instructions of the Board, I accompanied Superintendent Powell to Boston, Mass., in May last, and with him attended the annual meeting of the American Psychological Association. The membership of this Association is composed of those whose lives are given to the relief and care of afflicted humanity, and it presents in its meetings an interesting scene to the onlooker. Men of eminence in this work were in attendance from all parts of the United States and Canada and the occasion was one of deep interest. The papers presented and discussed were for the most part scientific in their nature, and of more interest to the physicians present than to the laymen. The address of welcome was delivered by Governor Guild.

It was pleasing to witness the warm welcome given Dr. Powell by his colleagues, for it was evidence of the high esteem in which he is held by them. Under Dr. Powell's management, the Sanitarium, measured by results, is recognized as one of the best in America.

In further obedience to your instructions and in company with Dr. Powell, I visited one school for the training and care of the feeble minded, and seven insane asylums, the former located at Waltham, Mass., the latter at New York, Poughkeepsie, Baltimore, Sykesville, Washington, Petersburg and Williamsburg. I will not burden you with the details of these visits but confine myself to a few general observations.

First of all, I am satisfied, from the standpoint of economical operation, there are few institutions whose cost approximates ours or which accomplish more with the same amount of means. In point of ability and devotion to duty, I regard our corps of officers as the peer, if indeed not the superior, of any with which I came in contact. Our system of records is as perfect as any seen by me, the Government Hospital at Washington being an exception. Our equipment compared with the institutions in and north of Wash-

ington is meagre and poor; compared with those of our sister states in the South it is equally as good. Pathological Departments were found in but two of the institutions visited, and a Dentist, as a member of the medical staff, in none, this last work being done by contract with local dentists. These two facts will indicate to you the advanced position occupied by the Sanitarium.

In all the institutions visited the value of occupation and employment as remedial measures was recognized and practiced. Such employment was found in the garden, on the farm, in the laundry, in the sewing room, in basket making, in shoe making, and in re-repairing, tailoring, etc.

In this connection I have long thought shops for the repair of shoes and for making men's clothing held in them possibilities of economy for us, provided a sufficient number of patients familiar with such work could be found among our inmates. One institution was visited in which all shoes worn by the inmates were made by them. Still another institution was equipped with a printing press, on which a weekly newspaper was printed by the patients themselves for circulation in the institution. The ordinary stationery used by the institution was also printed by them.

I visited one institution which was built on the cottage plan with open windows. This requires more attendants, and in consequence is more expensive than our plan. It remains to be seen whether or not better results come from it, but if this should prove to be the case, the increased cost is well justified.

The culinary departments of these various institutions were given close attention by me. A knowledge of the difficulties experienced by us in this department, and of the complaints of officers and patients of improperly prepared food and the consequent loss to the institution, made these departments of much interest. The organization existing in two of the largest institutions visited seemed to present a way out of our difficulties. This consisted in a Chef, who was paid a good salary, and who was in charge of the kitchens, the dietary, etc. In each kitchen was a head cook, who was likewise well paid, with one or two assistants. The kitchen helpers were drawn from the patients, and the increased cost equalized in part in this way. The kitchens of these institutions were immaculately clean, and the preparation of food was amid thoroughly sanitary surroundings. All waste was utilized. On my return home at the the first meeting of your body I laid this suggestion before you, and the Steward was instructed to reorganize

this department by the employment of a competent chef, and head cooks for the four principal kitchens. I am satisfied the result will be more than satisfactory and that you will be well pleased with it.

The equipment in these kitchens were carefully noted to the end that we might have something as a guide in the contemplated renovation of our main kitchen. the suggestions made to your body on my return with reference to this you were kind enough to adopt, and the work is now under way. When completed, this kitchen will be one of the best in the South, and its appointments, from a sanitary standpoint, well nigh perfect. It will furnish us a standard for future repair work of this kind.

The method of buying supplies in New York was interesting to note. The management of all the State's charities appears to be vested in one body, and supplies for them are all bought by it. If anything is to be gained by concentrating and buying in large quantities this method gives the various institutions the benefit of it and offers a suggestion of possible value to the institutions in this State.

It appears that we are not alone in the matter of securing an ample supply of good nurses. Other institutions are experiencing the same difficulty. Especially is this true of those, who, like us, must practice close economy. In our case this problem is one calling for thoughtful consideration. Faced, as we are, by the advancing cost of living and labor, and without the means to make any substantial increase in their pay, we must offer something more than wages, or else the best material will not come to us and our standard, in consequence, be lowered. One of these institutions has sought to overcome the difficulty by a nurses training school, which is regularly chartered and which gives diplomas upon the satisfactory completion of a two years course of study. It is hoped in this way to dignify the work and so attract a better class of material, which, in the end, would provide the institution with more competent nurses. Other and wealthier institutions are equipped with nurses' homes, which are nicely furnished and where the nurses congregate, when off duty, for social pleasure. The work, at best, is not attractive and various means are being used to make it so.

Of especial interest to Dr. Powell and me was the opinion of experts in attendance upon the meeting of the Association as to the proper treatment of epileptics. They seem agreed that the disease

is best combatted by segregating and colonizing this class of sufferers. This is already being done by many eastern and western states with highly satisfactory results. Outdoor employment and cottage life seems to present the ideal conditions for their treatment. This view is quite in line with that held by Dr. Powell, and for the accomplishment of which he has made many earnest appeals, all of which have had the hearty approval of the Board. None know better than he the value such an institution would be to the afflicted themselves and to the state. The success of such colonies in other states should be an encouragement to our lawmakers to thus get in line with them in this humane work.

In many ways the most interesting visit made by us was to the Massachusetts School for Feeble Minded, located at Waltham, Mass. Dr. Fernald, who is superintendent of this school and a recognized authority on this class, was away when we called, much to our regret. We were given a cordial welcome by the officers in charge, and every facility was afforded us for a thorough inspection of the plant. This institution is one of the best, if not the best, in America. More than one thousand pupils and inmates are cared for by it. Its staff consists of five physicians, fourteen teachers, one band master and thirteen matrons and supervisors. The inmates are housed in eight buildings, where they are classified, not alone as to sex, but by degrees of intelligence. The annual per capita cost in 1905 was \$183.00; The daily cost about fifty cents.

It is but natural for us to contrast the fortunate lot of these children with that of the helpless and hopeless ninety now in the Sanitarium, and I hope the day is not far distant when Georgia will make a similar provision for this unfortunate class.

Mental, moral and physical training is given the inmates, and no effort is spared to fan into flame, feeble though it be, any spark of intelligence they may have. It is not expected to entirely overcome the mental defect of any one of the inmates, and the most that can be hoped for is to develop what nature has given them. There is no attempt made to impart ready-made knowledge, and the teaching is direct, simple and practical. Objects play a large part in it, and the class rooms with their collections of objects of every kind, is very interesting to the visitors. The manual training room is likewise well equipped. The theory here is, that a boy who begins to construct is compelled to think. He becomes familiar with the objects worked on, the materials of which they are made and the purpose for which they are used. Practice gives him

accurate and definite control of his muscles. The same theory is followed with girls and their training does not materially differ. Much attention is given physical exercise, for in the effort to develop the bodies it has been found that a mental awakening not infrequently follows increased physical development. Every effort is made to bring into each child's life and experience such knowledge of common events and such familiarity with the manners and customs of ordinary life as form parts of the general education of normal children. Every effort is made to keep the inmates happy and contented, and to do this requires that they be kept busy. To keep them busy must tax the resources of the management. The boys do farm and garden work. Part of them are colonized some distance away, and their useful labors on the farm practically supports them while supplying to the school many necessities. Various occupations are found for them. The shoes of the inmates are kept in repair entirely by the boys. A printing press is owned by the school and all their stationary is printed by the boys. Assistants for the painter, baker, engineer and other artisans come from them. The weeding and hoeing is done by them; teams are driven by them, and in many ways they are kept busy in useful employment. The girls are kept equally busy. They are taught to wash, iron and fold clothes; much of the sewing, mending and darning is done by them; every capable girl keeps her own clothes in repair. They are taught to cook and are required to wash dishes, make beds, wash windows, sweep, etc. It seems to be fully realized that the only way in which a feeble minded person can be fitted to lead a harmless and contented life in adult age is, by acquiring habits of industry in youth. Much attention is given to the play grounds, and play time is observed with the same regularity as work time. The inmates appeared happy, contented and clean, and were of various ages from early youth to mature years, since to most of them the school must remain a home so long as they live. The work is one calling for wisdom, patience, tact and gentleness on the part of those in charge. The progress of the mental and moral development of the feeble minded child is painfully slow and tedious, but little by little progress is made, the pitifully narrow horizon widens the dulled mind brightens, and ideas are caught and assimilated; life becomes a new thing, and lo, a miracle is wrought.

Such noble work honors alike the Commonwealth, whose generosity makes it possible, and the self sacrificing men and women by

whom it is done. The best ends of society are served by it, and in it the God given command to the strong to care for the weak is heard and obeyed.

An itemized statement of the expenses incurred by both Dr. Powell and myself has been filed with the Steward and his check received in settlement. My time has been willingly given, and I hope not without some profit to our work. I thank you for the privilege given me.

Yours very truly,

J. T. BRANTLEY, Trustee.

REV. D. W. BRANNEN . . . . .	Chaplain.

# Sixty-Fourth Annual Report

OF THE

## Board of Trustees of the Georgia State Sanitarium

FOR THE YEAR ENDING DECEMBER 1st, 1907.

Milledgeville, Ga., January 1st, 1908.

To His Excellency, Hoke Smith, Governor,

Sir;—The Board of Trustees of the Georgia State Sanitarium, as required by law, submits herewith their annual report of its conduct and management for the year ending December 31st, 1907.

Forming part of this report will be found the annual reports of the Superintendent and Resident Physician, Treasurer, Steward and other officers of the Sanitarium, and to them you are respectfully referred for details as to the movement of its population and the history of all monies appropriated for its support. The Board has maintained a close supervision of the Sanitarium during the year, visiting it once each month for this purpose. It has much pleasure in commending the faithful efficient work of both the late Superintendent, Dr. T. O. Powell, and his successor in office, Dr. L. M. Jones, and their corp of assistants. Their tireless and unselfish efforts to promote the well being and happiness of the inmates merits them a warm place in the heart of every loyal Georgian.

### Death of Superintendent T. O. Powell

It becomes the sad duty of the Board to report the death of the beloved Superintendent and Resident Physician of this institution for twenty-eight years, Dr. T. O. Powell, which

occurred at Tate Springs, Tenn., on August 18th, 1907. In recognition of his long, devoted and distinguished service to this institution, and to commemorate his virtues, the Board has ordered that henceforth the main building of the Sanitarium shall be known as the "T. O. Powell Building," and that there shall be placed within its vestibule a bronze tablet on which shall appear this inscription:

THEOPHILUS ORGAIN POWELL.

1837-1907.

Seventeen years Assistant Physician and twenty-eight years Superintendent and Resident Physician of this Institution.

A Christian of simple faith and consistent life; a man of strong character and lofty ideals; a citizen of proven loyalty and true worth; an officer of rare judgment and distinguished ability; an alienist of great skill and wide renown whose single act in first substituting humane for harsh measures in the hospital treatment of the insane made him a benefactor of the human race.

"In recognition of his virtues this tablet and building are dedicated to his memory by the Board of Trustees."

A memorial service was held in his honor by the Board, and the tribute paid him by the Vice President of this body, Hon. Thos. G. Lawson, was ordered printed in full in this report.

It appears elsewhere.

Election of Superintendent L. M. Jones.

The vacancy caused by the death of Dr. Powell was filled by the election of Dr. L. M. Jones as Superintendent and Resident Physician. Dr. Jones brings to the office a well stored mind, a calm judgment, a thorough knowledge of the work of the institution gained from twenty-four years' experience as Assistant Physician in it, and in the judgement of the Board, is well qualified to carry on successfully the great work of his able predecessor.

### Number of Patients.

Since the last annual report of the Board 937 new patients have been admitted. The total number of patients under treatment during the year was 3955 which is the greatest number in the history of the institution. The daily average under treatment was 3083 as compared with 2978 in 1906, a net gain of 105 patients.

The actual number of patients now on hand is 3148, which is an increase of 130 over 1906. Nothing can more clearly illustrate the magnitude of this work than these figures.

### Finances.

For the support of the Sanitarium for 1907 the Board expended the total of \$382,593.55 made up of the appropriation for the year of \$370,000.00, the balance of \$9,917.55 left over from 1906, and an overdraft of \$2,676.00.

The daily cost of each patient was .34.

The annual cost of each patient was \$124.00.

This is an increase over the cost of 1906, and is due mainly to the unusual repairs necessary to be made during the year, and to the increased cost of wages, etc. The cost of supplies continues high. The total cost is of course very heavily increased by the larger number of patients cared for.

The new year begins with 130 more patients on hand than in 1907—far exceeding the estimate of the Board, and an overdraft of \$2,676.00. If the same increase in the number of patients in 1907 is maintained in 1908 and 1909, as is more than probable, and the cost per patient remains the same as now, it will be necessary for the General Assembly to supplement its appropriations for these years. Based on the above estimate of increase, the Board will require for the actual support of the Sanitarium for 1908,—\$398,306.00, and in 1909—\$412,067.00. These amounts, however, do not allow for the accumulation of a surplus in either year with which to guard against any emergency which may arise. The Board is therefore under the necessity of asking for

supplemental appropriations of \$15,000 for 1908 and \$30,000 for 1909. It is at once manifest that unless these additional appropriations are granted, and the Board is to live within the appropriations, it will be necessary to take some radical action regarding the reception of new patients, or else it will be necessary to return to their homes the harmless incurable cases now in the institution. The Board sincerely hopes neither of these painful alternatives will become necessary. The Board recognizes the fact that the appropriations for these years, if thus supplemented, are large sums of money, but it must not be lost sight of that the number of patients to be provided for is already very large, and is steadily growing larger.

For these patients must be provided food, clothing, medical attention, medicines, nurses, heat, etc. In addition, the very extensive property of the State must be kept in repair.

The cost of 34 cents a day per patient is low, and is made possible only by very economical management. It compares favorably with the cost of any similar institution in the United States.

#### **Tubercular Wards.**

For several years the Board has made an earnest appeal for funds with which to build and equip four wards, one each for white males and females and for colored males and females, for the isolation and sanitary treatment of patients afflicted with tuberculosis. 102 patients of this class are now in the Sanitarium. It is estimated that these wards can be built and equipped at a cost of \$15,000, and the Board earnestly recommends that an appropriation of this sum be made immediately available for this purpose.

#### **Important Improvements and Repairs.**

It became necessary during the year to replace the old wornout ice plant with a new one of larger capacity in order to keep pace with the growing needs of the institution. A ten ton machine has therefore been installed at a total cost

to the State of \$8,000, and the supply of ice and cold storage is thus made ample for years to come.

The main kitchen, which is attached to the T. O. Powell Building, from which nearly 1,000 persons are fed, has been completely renovated and remodeled. It is now in a thoroughly sanitary condition, and the preparation of food in it is an attractive sight. The Board hopes in the near future to be able to put all of the kitchens of the institution in a like sanitary condition.

The old baker's oven which has supplied the Sanitarium with its bread for years past, and which it has long since out-grown, has been replaced by a Peterson oven of modern build and ample capacity. A dough mixer has been installed with it.

This change has resulted in a marked improvement in the bread supply, which is now satisfactory both in quality and quantity.

The Superintendent has experienced the greatest difficulty in late years in securing competent cooks. As a result the quality of food prepared has been highly unsatisfactory, and has resulted in a large waste. In the effort to overcome this condition the Board directed the Superintendent to re-organize the entire kitchen service by the employment of a competent Chef in whose charge all the kitchens should be placed, and who shall be made responsible for the work in each. The Board is glad to be able to state that this forward step has resulted in a great improvement in the quality of the food.

As far as possible the assistants of each head cook in charge of each kitchen are drawn from the patients.

A grist mill has been installed at the colony, and much of the meal used by the Sanitarium for the past year has been supplied from it from corn grown at the colony.

The nearness of one of the old dairies to the "Twin Buildings" made it necessary for sanitary reasons to remove it to another location. This has now been done, and this menace to the health of the patients is removed.

### New Waterworks.

The Board is happy to announce the practical completion of the new waterworks. Of the \$75,000 appropriation for the erection of waterworks and electric light plant, \$68,911.26 has been expended, leaving a balance of \$6,088.74 on hand with which to pay a balance of \$1,844.12 still due the contractor, to complete the work, and erect the electric light plant provided for by the act of appropriation. To this sum will be added the proceeds from the sale of old waterworks machinery when the Board is able to effect such sale. This total sum will not be sufficient to complete the electric light plant, and it will become necessary for the Board at a later date to ask for a supplemental appropriation for this purpose.

The completion of the waterworks has given to the Sanitarium an abundant supply of pure filtered water. There remains to be done only the laying of a duplicate main in the bottom of Fishing Creek, and this work will be done by our own engineer with patient labor.

### Other Charitable Institutions Needed.

The Board deems it within its province to bring to the attention of your Excellency the crying need within the State of two other charitable institutions for the proper care of certain classes of our afflicted citizens who in the absence of suitable provision for them, must be received here. One of these needed institutions is a training school for the feeble-minded; the other is a colony for epileptics who are not insane. Under our present laws the Board is required to receive both of these classes in the Sanitarium. It requires no argument to show that a hospital for the insane is the very last place to which either should be sent. The first named class should be in a training school where amid proper surroundings, and by skilled teachers the little spark of intelligence given them can be fanned into flame, and where they can be taught how to contribute to their own support. The Sanitarium has about 100 children of this class within its

walls, presenting the saddest of all its sad scenes. It is not equipped as a school, and can do nothing for them but to shelter and feed them. Absolutely helpless to aid themselves, and hopeless without the aid of the State, they present an appeal mute but powerful to our humanity. The Board is constrained to believe that once the conscience of our people is aroused to public duty in this matter, they will be willing Georgia should follow in the lead of her sister States which have established such schools, and found their existence well justified. The small number of this class in the Sanitarium by no means represents the total in the State, since only the grosser types are committed here.

Epileptics who are not insane have no place in an insane asylum. Their presence in one is injurious to them, and to the inmates. They should be segregated and colonized. Modern science has demonstrated that outdoor employment and cottage life present the ideal conditions for the treatment of this most insidious disease. Experts are agreed that when taken in its incipency much can be done in this way towards effecting a cure. It is the duty of the State to establish and maintain such a colony, and so furnish to this class of her unfortunate citizens the one chance that is left them of happiness and usefulness. By the self-helpful labor of its inmates such a colony can be made to contribute largely to its own support so that the burden to the State after the initial investment is made need not be very large. Perhaps no class of our citizens, save only the insane, are shunned and avoided as this class. Every door is closed against them. The duty of the State toward them is clear and unmistakable, and the Board is fully warranted in this earnest appeal in their behalf. These two matters were very close to the heart of Dr. Powell, and his last report to the Board contained an eloquent appeal for the establishment of both institutions.

The State of Georgia could erect no nobler monument to the memory of this great and good public servant than to carry these cherished desires of his unselfish heart into prompt execution.

Respectfully submitted,

JOEL BRANHAM, President.

THOS. G. LAWSON, Vice-President.

RICHARD JOHNSON, Secretary.

JOHN T. BRANTLEY.

JAS. B. BAIRD, M.D.

CHAS. J. MONTGOMERY.

DR. T. O. POWELL

## Memorial

Adopted by the Trustees of the Georgia State Sanitarium on  
the Occasion of the death of Dr.

T. O. Powell, Superintendent.

Theophilus Orgain Powell, M. D., was born on his father's plantation in Brunswick County, Virginia, on the 21st day of March, 1837. His parents were of excellent character and of sterling Virginia stock. When he was a lad of but eight years his father brought his family to Hancock County, Ga., where he afterwards resided and where young Powell was brought up. He acquired his academic education in the "old field" schools of that county and in the celebrated private school presided over by that distinguished author and teacher, Richard Malcolm Johnson. When his academic education was finished he entered the Medical College at Augusta, Ga., and was graduated therefrom in 1859, duly receiving his degree of Doctor of Medicine. He at once eagerly engaged in the active practice of his profession, stimulated by the love of it as well as charmed by the engaging prospect of distinction and fortune that lay before him. On the 12th day of December, 1862, he was happily united in marriage with Miss Francis Augusta Birdsong, of Hancock Co., which union, continued in unbroken felicity to the hour of his death. Two daughters were the fruit of this union. Soon, however, his brilliant prospects were overclouded by the outburst of a ruthless war. Inspired by the ardor of young manhood, and thrilled by sacred love of his State he, early in the year 1862, enlisted as a private soldier in Co. I of the 49th Regiment of the Georgia Volunteer Infantry, ready if need be to give his life for the protection of home and country. But soon thereafter a broader and more useful field of labor was opened to him. He was tendered the choice of two positions, that of Surgeon of the 59th Ga. Regiment of Volunteers, or that of Assistant Physician to the Georgia State Sanitarium. With wise forethought he chose the latter position as offering an arena of more enduring usefulness.

Thus he came to this Institution in the freshness and strength of young manhood. No doubt he then consecrated his life with all its activities and possibilities, and all that life, as seen through the vistas of the distant future, meant to him, loyally and unreservedly to its service. No doubt with the earnestness and conscientiousness that always characterized his conduct he regarded its services not simply as a duty owed to the State, but also as the fulfilment of his duty to God. During the seventeen years he served as Assistant Physician under the tutelage of Dr. Green, its distinguished superintendent, his mind grew, his sympathies became enlarged, his training perfected and his experience enriched by the arduous labors that daily fell to his lot. On the death of Dr. Green in 1879 he was duly invested with the authority and responsibilities of Superintendent and Resident Physician. His experience and attainments and especially the natural constitution and frame of his intellectual and moral powers, eminently qualified him for the headship of the Institution; and his subsequent enlightened and judicious management of its affairs for twenty-eight years clearly attested the wisdom of his selection. In person, mind and heart he seemed to have been specially formed for this particular niche in the structure of Georgia's great charity. In portraying his management of its affairs the extravagant language of eulogy would mar the picture; only the truth in its simplicity is adequate. The record of his devotion is inscribed upon the history of the State and in letters which anyone can read upon the growth and enlarged usefulness of the Institution itself. The Institution has more than fulfilled the benevolent purpose of its founders, and has grown to be, we believe, the largest institution of its kind, save one, that now exists in the world. The comfort, the health and the welfare of its stricken inmates, at all times, elicited the anxious concern and strenuous endeavor of his great heart. Harsh and unkind treatment was under no circumstances tolerated. He was a wise, thoroughly balanced, resourceful and diligent officer, and in the line of duty always conscientious, resolute and just. His magnanimity of disposition was

without limitation. Equal to all emergencies and loyal to every trust confided in him, he bore the severest trials with serene fortitude and patience, and encountered the weightiest responsibilities with cheerfulness and courage. Towards his subordinate officers and employes of the Institution he was ever courteous, kind, sympathetic and helpful, and their beautiful devotion and cheerful co-operation manifested their appreciation of his kindness, and exhibited the pleasing spectacle of a harmonious, united and zealous corps of officers. His equable temperament and suavity of manner evidenced a spirit as gentle as a woman's, and as tender in the depth and sweetness of his affections. His sound practical judgment and rare executive ability are manifested in the orderly and well organized system that prevail in every department of the Institution wherein its numerous parts seem so well adjusted and so precise in their movements as to rival the harmony and adaptation of the different parts of skilfully devised machinery. Thoroughly acquainted with every detail nothing was allowed to escape his watchful eye. He maintained a special supervision over the care and treatment of the patients. An eminent and progressive alienist, he was the first to lead the way in discarding all instruments of violence and compulsion in the care and treatment of the insane. He put in force the laws of kindness and gentleness, esteeming them as more forceful and efficient than all other restraints. After thorough consideration of their utility and propriety, he bravely initiated every measure or process that he believed to be conducive to their welfare either physically, mentally or morally. His philanthropy was co-extensive with the ills of humanity. He had that clearness of spirit which perceives the best in things and in man, and if he failed to accomplish what was best it was because it lay beyond the domain of his reason and his effort. He obeyed the injunction of the Apostle Paul and labored "as they who must give account." He recognized his accountability to God, to his State and to public opinion, and all the rational powers of his nature developed, matured and operated under an exquisite and profound sense of its weight. It has been

truly said that "accountability is the gravitation of the moral universe. Without it the ruler is a tyrant, the judge a despot, the legislator a charlatan and the philosopher an empiric." Without it all mental culture is the agent of evil rather than of good. No culture is equal in its uplifting effect to heart culture attained under the Divine Spirit that comes down from above and baptizes brain and heart with its gracious outpouring. Dr. Powell was, therefore, always ready to give account of his Stewardship to the Board of Trustees, to the visiting public and to the lawmaking and governing body of the State, and during the annual visits and investigations of committees sent out from the General Assembly of the State his administration was invariably commended; never condemned or adversely criticized. And of the millions of dollars expended in support of the Institution not one dollar, subject to his control, was ever misappropriated. So steadfast was his interest in the work he was doing that he could not be tempted to lay it down and engage in work elsewhere by offers of salary even quadruple that he was receiving here. "Not money but usefulness" was his watchword. Thus he stood, firmly and unselfishly, until his eye grew dim, his hair silvered, and until there came the final call to lay his burden down. And for these reasons his memory will long be enshrined in the hearts of his admiring countrymen—the true Pantheon of American heroes.

Dr. Powell was also a learned and accomplished physician, and a recognized authority on the cure and treatment of the insane. He was ex-president of the Psychological Association of the United States and Canada, and also of the Southern Association of Superintendents of hospitals for the insane. He was a member of the American Medical Association and of the Medical Association of Georgia, of which he had been president. He also held high rank in other benevolent orders, being a Knight Templar, Mason and also of the Ancient Arabic Order of the Mystic Shrine.

His private life was as pure and exemplary, perhaps, as any mortals can be. Day in and day out he wrought for himself a noble and lustrous character. And who can est,-

mate the weight and worth of a great character—a character ingrained and interfused with love of the truth, with purity and with probity? His character was so symmetrical, its elements so blended and shaded into one another that it is difficult to define wherein he was most conspicuous. He was the mirror of honor, of justice and of truth; no persuasion or temptation could overcome the absolute inflexibility of his integrity. What one great man recently said of another we say of him: "His sense of justice was not merely academic-intellectual—it was a governing motive, a controlling element of his life, and with him it never stood aside for anything, not even self interest." Regulated by the highest standard of ethics his conduct was a shining model to all who came within the sphere of his influence. For one of princely personality, dwelling upon a lofty plain, his life was simple and his virtues unfeigned. He was pure in thought, averse to all immorality or meanness, unselfish, unsordid, tolerant to the weak, firm and resolute but not austere, decisive in action but not arbitrary or dogmatic. In following his convictions of duty he never swerved to the right or to the left. He attempted but one goal, that of duty performed according to the best light before him. He was careful of its requirements and sought to learn them from the highest sources, the Word of God and the laws of his country. The discharge of duty was sometimes painful and grievous, but he did not remit its obligations. For to him there were certain cardinal principles and precepts for the government of conduct whose obligatory force could neither be evaded nor impaired. Yet there was in his nature no element of cynicism, no harshness or bitterness, no envy or jealousy, no malevolence or uncharitableness. If the impulse of anger ever disturbed his feelings they were so well disciplined, so self-controlled that they never flamed into action. On the contrary, his kindling eye, his glowing countenance and his cordial hand clasp gave assurance of kindness and friendship towards all men. Dignity and personal magnetism were strikingly blended in him. His course was forward and manly, free from any taint of hypocrisy. Dissemination

and deceit found no lurking place in his bosom. Though he was great he was never self assertive, vain or egotistical. Indeed his modest regard of himself rather led him to underestimate his powers. He never sought applause, never accounted the endurance of toil and sacrifice as extraordinary achievements, but "persued the noiseless tenor of his way" content to modestly fulfil, in the fear of God, the sphere of action in which his lot was cast. His faculties moved in such an orderly manner, he was so well poised, so contained, so prudent and just, that unexpected or sudden emergencies never surprised or plunged him into weakness or error. No one ever knew the depth and breadth of his sympathies because they were more than adequately responsive to every demand upon them. In the graces of hospitality he was princely; in liberality he was almost prodigal.

A sweeter or a lovelier gentleman

Formed in the prodigality of nature—

The spacious world can scarce again afford.

During the Spring and early Summer these were manifest evidences of his declining health and strength. The Trustees of the Institution granted him a vacation and persuaded him to take a season of recreation and relaxation from business. He was reluctant to do so but after repeated urging he acquiesced in their request. He first visited the Indian Spring where, after a sojourn of several days, his health seemed in some measure to recuperate. He then visited the Tate Spring in Tennessee, and on his arrival there was seized with pneumonia, whose inroad upon his feeble frame the best medical skill obtainable could not arrest, and his decline was continuous and rapid, until the 18th day of August when his noble spirit passed from the presence of his wife and daughter and ministering friends into the haven of everlasting peace and rest. No clouds gathered over his expiring hours, for his life was hid with Christ in God. He had been an active and devout member and officer in the M. E. Church, South, for many years, and no one ever questioned the genuineness of his piety. In the order of Providence his appointed

course was run. His three score and ten years were generously crowned with the precious jewels of civic virtues and Christian graces.

His mortal remains were brought back to the Sanitarium, where his obsequies, simple and unobtrusive, were celebrated. Then by tender hands, by the light of the setting sun and amid a vast concourse of sorrowing friends, all that was mortal of Dr. Powell was gently laid to rest, beside the grave of his daughter, in the beautiful cemetery at Milledgeville. And we venture to say that he carried with him into the invisible world the unstinted love of the people among whom he had lived and who had known him so long. They loved him for the modesty of his demeanor, the purity of his character, the loftiness of his purpose, the nobility of his nature, the sincerity of his friendships, his myriad acts of kindness and liberality among them, for his social graces and domestic virtues, and for his fidelity to the great charity which his adopted State had committed to his hands.

Noble friend and comrade, Farewell.

By Judge Thos. G. Lawson.

## Report of Superintendent

For the year beginning Jan., 1st, 1907, and ending Dec., 31st, 1907.

Georgia State Sanitarium, Jan., 1st, 1908.

To the Honorable Board of Trustees,  
Georgia State Sanitarium.

Gentlemen;—As you know, death came on August 18th, 1907, and robbed this Institution of one who had been its chief guide for the past twenty-seven years,—one who had given his life's work to the alleviation of suffering and afflicted humanity, Dr. T. O. Powell, the beloved Superintendent. "His work will be done by others, but his place will never be filled."

As his successor it becomes my duty to submit to you the sixty-fourth annual report of this Institution for the year ending December 31st, 1907.

On Jan., 1st, 1907, there were white patients on hand, 2101, and colored—917. There have been received since 572 whites and 365 colored, making a total reception of 937.

There have been discharged, removed, eloped and died 807, leaving in the Institution January 1st, 1908, 3148 patients, of whom there were 206 whites and 44 colored on furlough, not discharged.

The average number of patients under treatment during the year was 3083, while the total number receiving treatment was 3955.

It will be seen that the average number receiving treatment was 105 more than last year. We have 130 more patients on hand than at the close of last year.

### Finances.

I feel it my duty to call the attention of the Board to our financial condition. For the year just ended we had an appropriation of \$370,000.00, and nearly \$10,000 left over from the 1906 appropriation, making about \$380,000.00 for the year

1907. At the close of the year we had an overdraft of \$2,676. Besides this we held back the shipment of coal which should have been paid for out of last year's appropriation to the amount of \$5,500.00, really making a deficit of something over \$8,000. Our appropriation for this year is \$390,000.00, only about \$200 more than it took to support us last year. When the Board asked for appropriations for the years 1908 and 1909 it was calculated that we would have a net increase of fifty patients. We find at the beginning of the new year we have an increase of one hundred and thirty. At thirty-four cents per capita, the amount that was necessary for support last year, it will require \$16,133.00 to maintain this net increase. With the increased cost of living, the item of beef alone costing us something like \$4,000 more than last year, we are at a loss to know how we are going to live the next two years unless the Legislature comes to our relief with a supplemental appropriation.

I feel sure you will agree with me that this Institution is run economically, and while our inmates are given a sufficient quantity of wholesome food and comfortable clothing, we could spend thousands of dollars more for their betterment, and for the good of the place if it were available. By referring to the reports of other similar institutions it will be observed that our per capita is very low. I have always felt that our legislatures should be more liberal, and do all they could toward making the lives of our afflicted class as comfortable as possible, and leave nothing undone that would tend to bring them back to health, home, family and citizenship. For of all afflictions there is none to compare with mental afflictions,—and nothing so pitiable as a human being bereft of reason.

Last February the Board very wisely employed a chef and four head cooks for the different kitchens, and I am pleased to say that their services have been very satisfactory. There has been much better system, the kitchens are kept more cleanly, and a very great improvement in the cooking.

The tearing down of the old oven in the bakery, and installing a new one has resulted in great improvement in

the bread. The improvement in the Centre Building Kitchen is very marked since a new tiled floor has been laid, a nice wainscoting of enameled brick, the walls cemented, painted, etc., and good ventilization overhead, which has been needed so long.

### Waterworks.

It is very gratifying that we can announce the completion of the new waterworks plant. If there is any **best** thing that was ever done for the Sanitarium this is it. For many years we have been compelled to depend upon a small stream near by which was liable to go dry any summer. I remember to have visited the pumping station on one occasion, and walked up the bed of the stream for fifty yards or more, on dry sand, the only water available was that which was seeping through the sand into a big well—just a small stream not as large as a man's arm. Providence sent us rain that night, and saved us from a water famine. Besides being dependent upon this small stream for our water, we had to use it without filtration. Now we are getting our supply from the Oconee River, and it comes to us pure and as clear as crystal, being thoroughly filtered, and is never failing in quantity. I know you rejoice with us.

While on the subject of water, I think it well to call your attention to the suggestion of our Engineer. He thinks it very desirable that we have a greater reserve capacity. Our present reservoir was built many years ago when the Sanitarium was very small. It still holds enough water for our present needs, unless an accident should happen to our plant, in which case it would be well to be better supplied.

### New Dairy.

A new dairy is being built, and should have been completed long before now but for our difficulty in getting lumber. We have what is known as the "old" and the "new" dairy. The one that is now being built takes the place of the old one, which was found to be too close to the twin buildings, and

had about served its day, besides never furnishing proper shelter for the milch cows.

We hope to be able to build suitable shelter for the cows at the other dairy before another winter comes. We have quite a nice lot of young cattle at the Colony from which we hope to add a good number of milch cows to our present number. Milk is a very essential diet to a large number of our inmates, and it is our purpose to give special attention to the dairies, and make all we can.

### Ice Plant and Cold Storage.

The old ice plant was a cheap affair, and was never satisfactory. Its capacity was only three tons, and was found to be inadequate during the heat of Summer. Thanks to you gentlemen, we can now have a new plant put up in first-class style with a capacity of ten tons, furnishing cold storage for our fresh meats, milk and butter, vegetables, etc, and all the ice needed on the wards.

### Repairs.

We have been very busy with repairs, but we never catch up. When you consider the age of some of our buildings, having been in use ever since 1842, you will readily see that a lot of repair work must be done to keep them in order. Quite a good deal of new flooring and plastering needs to be done, and a lot of antiquated waterclosets need to be replaced with new ones. The green-house will need general repairing before another winter.

I wish to call your attention to one wing of the Whittle Building that has never been finished. It is estimated that it will cost \$5,000.00 to \$6,000.00 to finish it.

We now have all the single rooms in the twin buildings occupied, and a good deal of the dormitory room also. When a new male patient is received one has to be moved out of a single room into the dormitory to make place for the new patient. I find the great objection to so much dormitory room is in finding patients suitable to occupy it. It is a

hard matter to get 40 or 50 men in one large room, and not have some one who will keep up a disturbance, and perhaps keep the majority awake a good portion of the night. The same condition prevails in the entire institution; that is, we have very little room either in the male or female departments, save dormitory room.

The nurses are given lectures twice a week during the Fall, Winter and Spring months by the Medical Staff, and Miss A. V. Cross, who is a regular graduate nurse. We have some excellent nurses who have obtained their knowledge under this training.

For the last three or four years we have experienced great difficulty in keeping enough help on the wards. We were not able to make selections, but were forced to take such as we could get, knowing at the time such help was inefficient on account of age, want of education, etc. While the cost of living has greatly increased and wages everywhere have increased very materially in every class of work, the wages of our attendants remain the same as they have been for the last forty years, with the exception of the white females whose wages were raised about twenty per cent. two years ago.

I thank you, gentlemen, for raising the white male attendants in the same proportion to begin with the new year. There is greater satisfaction, and I feel confident that we will be able to fill all vacancies, and have a better class of applicants to select from than we have had for years.

The colony for colored males, about four miles south of the Sanitarium, continues to show the wisdom of its establishment. It is what might be termed a health resort for about eighty colored male patients, for they are the healthiest and happiest class in our Institution. They much more than make expenses as you will see by referring to the report of our Assistant Steward. Proper outdoor exercise is the best treatment for a great many of our patients.

Religious services are kept up weekly, and seem to be a source of comfort to a good number. As is usually the case, the women attend in larger numbers than the men.

By reference to the report of the Librarian you will see the number of contributors to the library for the patients for the year 1907. The books, papers, etc., are a source of great enjoyment, and we hereby tender thanks to all who have been so kind as to remember our Institution in this manner.

Our sources of amusement are meagre, but we have done the best we could with the means at our command. As a rule a dance is given once a week when the weather is favorable. We have two graphophones which afford a good deal of pleasure and merriment, and during the summer months we frequently have baseball games in which the male patients participate. They also engage in quoits and marble playing.

#### Medical Staff.

Dr. L. P. Longino was elected Assistant Physician at the October meeting, and Dr. R. V. Lamar, our Pathologist, resigned his position to take effect the 1st of November. He goes to New York to pursue research work in the Rockefeller Institute. It was with great regret that we had to give him up. He was a bright and faithful student and worker, and we predict a bright future for him.

We are in correspondence with Dr. David G. Willetts, who is now assistant in the Pathological Department of the Government Hospital for the Insane at Washington, D. C. He has agreed to our terms, and will be with us within the next few days to fill the vacancy left by Dr. Lamar.

All other members of the Staff were re-elected.

I feel that I cannot too highly commend the work done by our Staff, for they are efficient and faithful. Not only can I commend the Medical Staff, but every other officer of the Institution.

When you, gentlemen, tendered me the responsible position of Superintendent of this great Institution I could not have undertaken the task had I not known so well the class of officers you had at the head of all Departments. I hereby tender them my sincere appreciation for their co-operation and faithfulness to duty.

I also wish to thank every employee who has been faithful to duty.

We have also to report the resignation of Mr. Chas. H. Whitfield, who has so acceptably filled the office of Secretary for the past fourteen months. He leaves us to engage in the mercantile business. We wish him the success he deserves. We consider the Institution fortunate in being able to secure the services of Mr. H. S. Jones to fill the vacancy left by Mr. Whitfield. Mr. Jones had formerly been Secretary for quite a number of years, and is thoroughly familiar with all of its duties.

I hope you will continue to lay before the Legislature the necessity of providing separate buildings for our consumptive cases. It is a matter of common knowledge that the disease is contagious, and we feel that it is a great injustice to those who are free from it to be shut up in wards with those who have it in all stages. In this instance the golden rule should be applied.

We now have in the Institution something over 100 tubercular cases—about 43 whites and 59 colored.

#### **Epileptic and Feeble-minded Children.**

In the last Annual Report of this Institution the legislature was ably urged both by the Board and Superintendent to provide a colony for the epileptics, and a separate home for the feeble-minded children. I cannot say more than was said then on this subject. I hope you, gentlemen, will continue to place this important matter before the "powers that be" until they see it as we do, and make the necessary provision.

#### **Convicts.**

I respectfully call your attention to page 107 Georgia Laws of 1904; No. 586, with regard to insane convicts.

The law provides "that insane convicts shall be kept at the prison farm, and further, that such convicts as are now in the State Sanitarium shall be returned by the Superintendent thereof to the Prison Commission as soon as arrangements

have been made to care for said convicts as is provided in this act."

We have three convicts that we have been caring for for a number of years—one white male and two colored males. They ought to be cared for by the prison farm.

### Health.

The health of the Institution has been as good as usual, with the exception of having an epidemic of measles principally in the twin buildings. Out of more than 150 cases we lost only one case. We also had some cases of chicken-pox, mumps, erysipelas and typhoid fever. Diarrhoea is very common among the insane, especially with the old and feeble cases. We are never without that. Our death rate shows 91.2 per cent, based on number treated, which is better than the year previous. Our recoveries, based on the number of admissions show .407 per cent. This is a better per cent. than was made the previous year.

---

Below will be shown a sample of the examinations that are made on our reception wards when patients are admitted. Also nurses' notes on new cases.

### MENTAL AND PHYSICAL EXAMINATION. GEORGIA STATE SANITARIUM.

Date of admission, Jan. 21, 1908; name, Mrs. ; age, 32; sex, W. F.; weight, 136; height, 5 ft. 5 in.

#### PRESENT STATE.

Violent, threatened; dangerous, no; destructive, no; homicidal, no; suicidal, no; nutrition, good; articulation, normal; facial expression, suspicious; excited, at times; melancholy, no.

Mental State.—Delusions, various; illusions, probably; hallucinations, yes—hearing, sight.

Habits. Cleanly, yes; untidy, yes.

Convulsive seizures, no; gait, normal.

Secretion.—Glandular, slightly exaggerated; Patella, slightly exaggerated.

Reflexes.—Angle clonus, absent.

Special Senses.—Eyesight, pupils are normal in size, react to light and accommodation.

Tropic Disturbances.—Muscles, normal; bone, normal; hair, normal.

Circulatory System.—Pulse, 76 regular, volume good; arteries, A. B. imperceptible. Slight systolic. Heart, murmur at apex. Sec. sound, normal. Sounds at the base normal.

Respiratory System.—Lungs, chest is broad and full. Expansion good. Physical signs negative anteriorly.

Abdomen rather full, firm, resonant, non-sensitive.

Sphincters. . Anal, liver comes two finger breadths below costal border; vesicle, spleen is normal.

Genito-Urinary System.—Not made on account of resistance of patient.

Diagnosis.—Maniac Depressive Insanity (excitement).

#### NURSE'S NOTES ON NEW CASES.

Name, Mrs \_\_\_\_\_; admitted Jan. 21, 1908.

22. First day—Temp; resisted; agitated; appetite good; one movement of bowels; voided urine four times; normal quantity and color. Slept well.

23. Second day—Ax. temp. 98; pulse 74; resp. 19; agitated; delusional; appetite good; one movement of bowels; voided urine three times, normal quantity and color; slept well.

24. Third day—Ax. temp., 97.4-5; pulse, 70; resp., 20; agitated delusional; appetite good; one movement of bowels; voided urine four times, normal quantity and color; slept very little.

25. Fourth day. Ax. temp., 98 1-5; pulse, 78; resp., 19; agitated; delusional; appetite good; one movement of bowels; voided urine three times, normal quantity and color; slept very little.

26. Fifth day—Ax. temp., 98; pulse, 84; resp., 20; agitated; delusional; appetite, good; no movement of bowels; voided urine three times, normal quantity and color; slept very well.

27. Sixth day. Ax. temp., 98; pulse, 96; resp., 20; agitated; delusional; appetite good; one movement of bowels; voided urine three times, normal quantity and color; slept very little.

28. Seventh day—Temp.; resisted; agitated; normal; delusional; appetite good; one movement of bowels; voided urine four times, normal quantity and color; slept very little.

29. Eighth day—Ax. Temp., 97.4-5; pulse, 74; resp., 18; agitated; delusional; appetite good; one movement of bowels; voided urine three times, normal quantity and color; didn't sleep any.

30. Ninth day—Temp.; resisted; agitated; delusional; appetite good; one movement of bowels; voided urine four times, normal

quantity and color; slept very well.

31. Tenth day—Temp.; resisted; agitated; delusional; appetite good; one movement of bowels; voided urine three times, normal quantity and color; slept very little.

#### NOTES ON NEW CASE.

Name, Mr. ; age, 32; weight, 136; admitted Jan. 21, 1908.

#### HISTORY.

Has borne five children. Date of last birth Nov. 17, 1907. Date of first symptoms of this attack Jan. 1, 1908. Symptoms manifested—She thought the children were dead and left home. She has not been homicidal, suicidal, violent, destructive or filthy, but disposed to do mischief with fire. No hereditary tendency except insanity.

Jan. 26. Patient has been badly agitated and somewhat excited at times since received, but realizes where she is and says she knows she is not insane, that there is not anything wrong with her except she has been shot in her head. She also imagines that there is a gash in her head, stuffed with paper, that the rooms are filled with chloroform and the building will be burned down at a certain hour. She says she has borne five children, but they and all of her sisters are dead and she heard a voice say that she, herself, was going to be killed, too. She is very restless during the day, seldom stays in one position five minutes at a time, but is continually going from the windows to the doors and trying to get out, and says she can not be contented while so many people are dying and being killed. She is constantly calling or talking to some imaginary person, and very often appears to be in a dread, and will say some one is trying to shoot her. At night she never goes to sleep without looking beneath her bed. Says there are spirits in her room; yet she usually sleeps well. Her appetite is ravenous, but she refuses medicine, imagines it is poison, and she does not like to have her temperature taken; says the thermometer contains carbolic acid. She has not been violent, but very resisting at times. She prepares her own toilet, but is careless about her appearance; but is cleanly.

No. 4566.

#### URINALYSIS (Chemical and Microscopical).

Name, Mrs. ; Date, 1-4-'08; specimen taken at 6:30 a.m.; examined at 10 a.m.

#### PHYSICAL PROPERTIES.

Reaction, acid; color, yellow; odor, normal; sp. gr. 1016.

## ABNORMAL CONSTITUENTS IN SOLUTION.

Albumin—trace.

## SEDIMENT.

Calcium axalate crystals abundant. Epithelial cells, particularly polygonal form abundant. Rose pale granular casts, no pus, no acids.

D. G. W., M. D., Resident Pathologist.

For further details I respectfully refer you to reports made by Steward, Assistant Steward, Matron and other officers.

The statistical tables which follow will give in detail the movement of white and colored population.

In conclusion I beg to express my appreciation of the confidence you have shown in placing me in such a responsible position, and to assure you that I shall ever strive to merit your approval in all that concerns the welfare of the Institution and its unfortunate charges.

Very respectfully,

L. M. Jones.

Superintendent.

STATEMENT, WHITE.

In relation to the number of white patients during the year, or from  
January 1st, 1907 to January 1st, 1908.

There were patients on hand January 1st, 1907 . . . . .	2101
White Male Lunatics . . . . .	846
White Male Epileptics . . . . .	99
White Male Idiots . . . . .	37— 982
White Female Lunatics . . . . .	989
White Female Epileptics . . . . .	100
White Female Idiots . . . . .	30—1119—2101

There have been received during the year:

White Males . . . . .	287	
White Females . . . . .	285—	572

Total number under treatment . . . . . 2673

There have been—

Discharged, restored. . . . .	51	
“ improved . . . . .	220	
“ removed . . . . .	34	
“ eloped . . . . .	4	
“ not insane . . . . .	1 —	310

There have died—

White Males . . . . .	101	
White Females . . . . .	84— 185—	495

Leaving on hand January 1st, 1908 . . . . . 2178

CLASSIFICATION OF THE WHITES.

White Male Lunatics . . . . .	826
White Male Epileptics. . . . .	128
White Male Idiots . . . . .	51—1005
White Female Lunatics . . . . .	964
White Female Epileptics . . . . .	142

## Remarks.

During the year I have visited the wards, taking them in numerical order, examined the mouths of the patients and rendered such services as were feasible.

J. C. RICHARD,

Dentist.

## Apothecary Department

Milledgeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

The following is my report of Apothecary Department from January 1st, 1907, to January 1st, 1908.

It being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution, we have done so at all times where it was economy to do so, restricting purchases solely to chemicals and such specialties as were required by the physicians.

### Statement.

The following is a statement of all expenditures, etc., of Apothecary Department from Jan. 1, 1907, to Jan. 1, 1908.

Amount of drugs purchased, including all druggists sundries, dental and laboratory supplies, etc., all preparations for fumigation, disinfecting and sanitary purposes, also all alcohol, wines, and whiskies . . . . .	\$3681.07
Amount of drugs sold officers and employees . . . . .	354.06
Amount of drug on hand . . . . .	3025.00
Amount of fixtures, etc. . . . .	385.50
Number of prescriptions filled . . . . .	34139

Respectfully submitted,

D. S. CARRINGTON,

Apothecary.

## Report of Treasurer

Milledgeville, Ga., January 1, 1908.

Certificate of L. C. Hall, Cashier of the Merchants and Farmers Bank, attached and made a part of my report.

Respectfully submitted,

L. H. ANDREWS,

Treasurer Georgia State Sanitarium.

Milledgeville, Ga., Dec. 31, 1907.

This is to certify that Mr. L. H. Andrews, Treasurer, Georgia State Sanitarium, has on deposit, in this Bank, subject to check, at the close of business this day, Eighteen Thousand Three Hundred Sixty-seven and 79-100 Dollars (\$18,367.79).

L. C. HALL, Cashier,  
The Merchants and Farmers Bank.

Attest:

Jno. T. Day, N. P.,  
Baldwin County, Georgia.

## Report of Steward

Milledgeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

I have the honor to transmit through you to our honorable Board of Trustees this, my report as Steward, embracing the period from Jan. 1, 1907, to Jan. 1, 1908:

Abstract "A" shows the balance brought forward from last year, the amount drawn from the State Treasurer for the support and maintenance of the Sanitarium, together with a classified statement of the disbursements and an overdraft of \$2676.23 due our Treasurer.

Abstract "B" shows the expenditures on account of subsistence.

Abstract "C" shows the expenditures on account of clothing.

Abstract "D" shows the expenditures on account of fuel and transportation.

Abstract "E" shows total amount officers' pay rolls.

Abstract "F" shows total amount wages pay-rolls.

Abstract "G" shows the expenditures on account of incidental expenses.

Abstract "H" shows the expenditures on account of Medical Supplies.

Abstract "J" shows the expenditures on account of contingencies.

Abstract "J" shows the expenditures on account of stationery and postage.

Abstract "K" shows the expenditures on account of special appropriation for waterworks.

Abstract "L" shows the requisitions drawn on State Treasurer for support and maintenance.

Abstract "M" shows the average number of patients from 1873 to 1908, also the per capita cost per diem and per annum.

Abstract "N" shows the cost of maintaining one patient for year, month, week and day.

Our Storekeeper, Mr. W. H. Hunter, reports stock on hand \$14,526.38.

Our Apothecary, Mr. D. S. Carrington, reports stock on hand \$3,025.00.

Our per capita per diem is 34c.

By reference to the report of Mr. G. N. Hollinshead, Assistant Steward, you will ascertain results from garden, dairies, hogs, etc., also a report of stock, wagons, implements, etc., on hand. In compliance with the law, duplicate vouchers of the expenses accompanied by the required certificate, approved by the Superintendent and audited by the Trustees, have been filed in the Executive Department in Atlanta.

I have devoted my entire time as required by the rules of the Institution to the Stewards' work, and have to the best of my ability discharged the duties incumbent upon me.

I am indebted to our Board of Trustees as well as yourself for the confidence reposed in me.

Respectfully submitted,

LUCIUS J. LAMAR,

Steward G. S. S.

For one year . . . . .	\$124.10
For one month . . . . .	10.20
For one week . . . . .	2.38
For one day . . . . .	.34

## REPORT ASSISTANT STEWARD.

Milledgeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

I herewith hand you my report as Assistant Steward for the year 1907 of the Dairies, Garden, Farm, Pork and Transportation. Also statement of stock, wagons, etc. on hand January 1, 1908. We have lost since the last report one old mule, and seven head of cows. The stock are all in fair condition.

Very respectfully,

GEO. W. HOLLINSHEAD,

Assistant Steward.

## REPORT OF ENGINEER.

Milledgeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

I have the honor to submit herewith my report of the workings of this department from January 1, 1907, to January 1, 1908.

Respectfully submitted,

T. H. DESAUSURE,

Engineer.

## Improvements.

The waterworks, for the construction of which a special appropriation was given in 1905, has been completed and is in daily use. The plant is located on the bank of the Oconee river, 20,648 feet distant from the institution, and above the city of Milledgeville. Any contamination of the river from either surface drainage or the sewage of that city is an impossibility. The building is of brick with tin roof, and the chimney is of brick also. The site is on a bluff six hundred and twenty-five feet from the river bank and is above the highest water known. Three hundred feet in the rear of the building is a hill on which is located the sedimentation basins. There is a brick intake-well in the river from which runs a sixteen inch cast iron pipe to the suction well near the pumping station. The raw water is pumped into the sedimentation basins and is given the dose of chemicals necessary to produce the proper coagulation, while in transit. As the sedimentation basins have to be cleaned out every few months two of them have been built. Each one has capacity sufficient for the work. The water flows by gravity from the sedimentation basins to the filters, of which there are two; each having a capacity of five hundred thousand gallons per twenty-four hours; and through the filters to the clear water basin, from which it is taken by the clear water pumps and delivered by them into the elevated tank at the sanitarium. All of the

important pumping machinery of the plant; the boilers and the sedimentation basins are in duplicate, and all of the larger pumps, four in number, are of the compound type and are worked condensing.

As the river at the station has an artificial height of eight feet above its normal flow, caused by the dam of the Oconee River Mill, located about a mile and a half below, we had to safeguard ourselves against having the intake pipe left high above water, should the river fall to its normal level on account of a washout of the dam below. This has been accomplished by placing the intake pipe below the level of normal flow. While this was troublesome and expensive to do, it was very essential. We get an abundance of bright sparkling water, which has been shown by analysis to be of excellent quality for all purposes. Ninety-nine per cent. of the bacteria found in the raw water is removed by the process of sedimentation and filtration.

The rehabilitation of the kitchen of the T. O. Powell building, which was begun in 1906, has been completed. The side walls of this building, which are sixty by forty feet, had been whitewashed so often that it could not be made to look well, so the entire surface of the walls were chopped away and the surface plastered with cement mortar and painted. The overhead work, ceiling and trusses has been ceiled with wood and painted, and a large ventilator, running the full length of the building, has been built on the roof. The floor, which was of brick and much worn, has been relaid with two inch gray hexagon tile on a concrete foundation. The walls have been wainscoted with white enamel brick for a height of six feet, and new sash with large glass used to replace the old ones. Two new wrought iron ranges, to replace the old ones, have been used. One of them is a twelve-foot, two fire, four oven range, and the other is six feet long with a single fire and two ovens. Four, 4-bushel vegetable steamers and an eighty-gallon jacketed steam kettle have been put in also, and the old sink has been replaced by two sinks placed on an iron pipe frame. An iron frame table having a drainboard top has been placed nearby. The old steam jacketed copper coffee urns, which were much battered and worn

from long usage, have been replaced by two new ones of eighty and fifty gallons each respectively. The best one of the old urns has been worked over and lined with block tin and put back into use for the preparation of fruits, etc.

A ten-ton absorption ice machine has been bought and set up in the place of the old three-ton plant which the institution had outgrown. The new machine has a capacity of eight and one-half tons of ice per day and two and one-half tons of refrigeration.

A new twelve-foot, two fire, four oven wrought steel range has been put in the kitchen of the Negro Building.

A building thirty-one by twenty feet with an engine shed twelve by eighteen feet and a counter shaft shed eight by forty feet, has been built at the colony and equipped with the necessary stones, machinery and shafting for shelling and grinding corn into meal, and the grinding of various food-stuffs for the stock. This machinery is run by the twenty-horse power gasoline engine purchased for the farm the year previous.

All of the tin roofs of the institution, thirty-one hundred and ninety-two squares in all, were painted during the summer.

The grounds at the rear of the Whittle Building have been graded and leveled into such shape that the water will not lie on it after a rain; and some of the banks have been sodded to prevent washing.

A water closet has been put in the Laundry for the use of the female operators.

We have put in, on trial in the West Detached Building, a water closet which seems to meet all the requirements of a sanitarium for the insane better than any we have ever had. It consists of a vitreous earthenware closet made in a single piece and without any moving parts whatever. There is not even a wooden seat; the seat being formed by the peculiar shape of the top of the closet, which is of such shape and so substantial that it can be bolted securely to the floor and wall. The water supply is from an enameled iron syphon-tank, placed high on the wall, and actuated by a small sub-

stantial knob, so placed in an iron run-way, that it can not possibly be injured with the hands alone.

To prevent the growth of algae in the filtered water and to keep out all polluting matter from the clear water basin at the waterworks, it has been covered with a light wooden roof.

All of the telephone wires about the institution have been renewed, and the two lines to Milledgeville, and that to the waterworks, have been made metallic circuits in order to avoid troubles arising from stray currents and induction from the city's electric light wires. Twenty-four and one half miles of wire was used in this work. Four new telephones have been added to the exchange during the year; one to the sewing room, one in the house of the engineer at the waterworks and two on the wards.

One of the cottages has been resingled and a tin roof has been put on its piazza.

The old oven in the Bakery has been torn out and a twelve by thirteen foot Petersen oven built in its place. This oven is a continuous baker, as the fire does not enter the baking chamber at all. We get much better bread since this oven has been in use, and it is very economical in the use of fuel.

All of the material for the new dairy is on hand and fifty per cent. of the work is done.

Besides the ordinary repair work, the following articles have been made in the carpenter shop and tin shop:

98 Boxes for shipping coffins.	42 Large benches for yard.
333 Coffins.	9 Plow beams.
3 Hominy Paddles.	1 Wagon tongue.
9 Bakers' peels.	8 Coupling poles.
18 Dining Tables.	1 Large tool box.
9 Voucher Boxes.	1 Meal box.
2 Wagon bolsters.	3 Lattice doors.
13 Meat boxes.	150 Mop handles.
24 Tubs.	10 Wooden trunk boxes.
1 Record box.	2 Water troughs.
3 Commodes.	4312 Square feet of flooring laid on wards.
2 Double shelf tables.	1 Soap paddle.
2 Large bread safes for bak- ery.	2 Water tables.

1 Cart Body.	2 Cake pans.
2 Rakes.	2 Yard horns.
2 Doubletreers.	28 Dish pans.
21 Shuck Mops.	4 Buckets.
1 Wagon Bolster.	2 Galv. iron center seals for gas works.
1 Wagon crossbar.	1061 Chairs repaired.
2 Sink tables.	92 Cane seats put in chairs.
1 Wire guard.	45 Cane seats repaired.
1 Medicine Cabinet.	9 Cane backs repaired.
1 Lattice and partition across sun room.	14 Cane backs put in new.
3 Clothes racks.	76 Tables repaired.
1 Telephone booth.	3 Night-watch-clock cases re- paired.
1 Rat-proof harness closet.	469 Wooden veneer seats put in chairs.
6 Coffee pots.	23 New bed springs put in.
168 Half-gallon pitchers.	40 Bed springs repaired.
3 Bread pans.	13 Lounges upholstered.
1 15-gallon oil can.	19 Lounges repaired.
22 60-pound lard cans.	9 Chair seats upholstered.
5 1-gallon pots.	3 Chair backs upholstered.
12 Bread tubs.	3 Chair backs upholstered.
26 Potato steamers.	1 Oxbow made.
3 1-quart oil cans.	17 Sets of harness repaired.
1 8-gallon can.	5 Bridles repaired.
5 Mess pans.	2 New Check reins made.
53 Small messpan boxes.	6 New back bands made.
1 Doughnut cutter.	2 New breast yoke strops made.
3 Large galv. iron tubs.	2 Breast yoke strops re- paired.
3 Sugar boxes.	14 Hame strings made.
2 Post Lamps.	5 Reins repaired.
25 Large kitchen dippers.	3 New shaft bands made.
1 Fish bucket.	16 Hold back straps made.
2 Bread boxes.	16 Breechings repaired.
2 Sterilizer cans.	5 Small straps made.
21 Dinner pails.	1 Harness saddle repaired.
1 Saucepan.	1 Collar repaired.
1 Cracker box.	2 Office tables recovered.
6 Scoops.	1 Mail pouch repaired.
4 Galv. Iron drip pans.	37 Dressers repaired.
20 Drip cups.	38 New mirrors put in.
2 8-in. funnels.	4 Mangle aprons made.
1 Galv. Iron float.	1 Bench repaired.
25 Milk pans.	
1 Cream freezer.	
26 Baking pans.	
8 Milk shake cups.	

4	Fire screens repaired.	1	Christmas-tree set up.
4	Beds repaired.	1	Door casing repaired.
2	Locks repaired.	8	Wards Cocoa matting laid
5	Safes repaired.	1	Shaving stand repaired.
2	Ice chest repaired.	2	Bedsteads repaired.
1	Lap-board made.	1	Piano repaired.
1	Settee repaired.	1	Bedstead varnished.
1	Corer made for two-horse wagon.	1	Cushion made.
2	Trunks repaired.	1	Carpet put down.
24	New dressers set up.	1	Halter made.
9	Windows repaired.	1	Stool repaired.
213	Window curtains put up.	China matting put down on two room floors.	
10	Leather cobbler seats put on chairs.	Shades repaired on six wards.	
1	Violin repaired.	Linoleum put down on eleven wards.	

## REPORT OF MATRON

Milledgeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

With thanks to the officers and to my co-workers who have in any way aided me, permit me to submit the enclosed as my report from January 1, 1907, to January 1, 1908.

I would add that all repairing has been done for the institution and all scraps and remnants put to a good use; and have been properly accounted for through Store-keeper's Office.

Respectfully submitted,

MRS. J. M. DARNELL,

Matron.

## REPORT OF CHAPLIN.

Milldegeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

Permit me to report that I served as Chaplain of the Sanitarium from November 1, 1906, to October 31, 1907. Services were regularly held during the year every Sunday. The patients seemed to derive much comfort from the services, and attended them in large numbers.

Funeral services were held for deceased white patients whose remains were not transported to their former home.

Respectfully submitted,

D. W. BRANNEN,

Chaplain.

## REPORT OF LIBRARIAN.

Milldegeville, Ga., January 1, 1908.

DR. L. M. JONES, Superintendent.

Dear Sir:

Below you will please find my report for the year ending January 1, 1908:

**Sixty-fifth Annual Report**  
OF THE  
**Board of Trustees of the Georgia  
State Sanitarium**

For the Year Ending December 31st, 1908

---

Milledgeville, Ga., January 1st, 1909.

To His Excellency, Hoke Smith, Governor:

Sir—In compliance with Section 1421 of the Code of Georgia, the Board of Trustees of the Georgia State Sanitarium submits herewith its report of the conduct and management of this institution for the year ending December 31st, 1908.

The Board was organized promptly upon the appointment of its members, and has maintained during the year a close supervision of all the affairs of the Sanitarium; visiting it once each month for this purpose. The best interests of the State have been constantly studied, and every effort made with the limited means at its disposal to provide the inmates with everything needed for their comfort and restoration to health. Supplies continue to be bought on competitive bids from samples submitted. The Colony farm is made to contribute substantially to the support of the institution. The dairies are being reconstructed under the supervision of an experienced dairyman, and the supply of milk, so vital in the nourishment of the sick, is being largely increased as a result.

The Board notes with much gratification the harmony prevailing among the officers of the Sanitarium, and commends their faithful devotion to duty. The responsibilities resting upon Dr. Jones, the Superintendent, are very heavy, and the Board would be derelict in its duty did it fail to make due acknowledgment of the ability and fidelity with

which he meets them. The work of the Sanitarium under his guiding hand moves along smoothly and satisfactorily.

Forming part of this report will be found the reports of the Superintendent, and Resident Physician, Steward, Treasurer, and other officers, which will supply you with all needful details as to the movement of its population, and the expenditure of monies for its support.

### Population

The close of 1907 found 3148 patients on hand. Reference to the Superintendent's report shows 947 patients received during the year. The total number of patients under treatment during the year was 4,095, while the daily average was 3,130—an increase of 47 patients over the daily average for last year. The number of patients on hand is 3,112 as against 3,148 in 1907. This decrease is accounted for by the discharge of a large number of patients who were out on furlough. The number out on furlough in 1907 was 250 while now it is 105—a reduction of 145 patients. The recoveries for the year, based on the number of admissions, was 49 per cent. as against 40 7-10 per cent. last year.

### Cost to the State

For the support and maintenance of the Sanitarium for 1908 the Board expended \$400,188.74, which sum includes the payment of an overdraft of \$2,676.23 brought over from 1907. The regular and supplemental appropriations for the year placed in the hands of the Board for this purpose \$405,000.00, leaving a balance on hand of \$4,811.26. The cost per annum of each patient was \$127.00. The daily cost per patient was 34 7-10 cents. The increased cost per annum of each patient over 1907 was \$2.90. From the above figures it will be seen that the estimate of the Board, to-wit \$398,306.00, as to funds needed for 1908 was approximately correct. The Board would direct your Excellency's attention to the steady increase in the number of patients; to the growing age of many of the buildings, and their constantly increasing need of repairs; to the advancing cost of supplies, and to the destructive tendency on the part of in-

sane persons. The Board practices every wise economy, but the cost of maintenance is increasing slowly.

Foreseeing that the regular appropriation for 1908 would be insufficient to meet the needs of the institution, the Board was compelled to ask for a supplemental appropriation of \$15,000.00 for 1908, which appropriation was generously granted by the General Assembly. In considering the cost of this institution to the State, the large and increasing number of patients under treatment in it should not be overlooked.

### Electric Lights

In 1905 an appropriation of \$75,000.00 was made for the construction of waterworks and electric light plants at the Sanitarium. The waterworks plant has been completed, and is daily supplying the institution with an abundance of pure filtered water. An unexpended balance of \$4,212.15 from this appropriation is in the hands of the Board for the construction of an electric light plant. This sum of money is not sufficient for this purpose, and the Board has thought it best to enter into contract with the Oconee River Mills of Milledgeville for supplying the institution with lights and power. A contract has been made, which, in the judgment of the Board, will supply both to the institution at less cost than could be had from a plant owned by the institution, and the unexpended balance will therefore be used in wiring the buildings and grounds for this purpose.

### Water Reservoir Needed.

The present storage capacity for water at the Sanitarium has been long outgrown. An abundant supply of water is enjoyed, but should a breakdown occur in the pipe line from the pumping station  $3\frac{1}{2}$  miles away, or in the pumps, the supply stored at the Sanitarium would be quickly exhausted. Such a condition in the event of a fire might result in a disastrous loss of human life and property. The matter is one of such seriousness that the Board is constrained to ask an appropriation of \$15,000.00 for the purpose of building an underground concrete reservoir of sufficient capac-

ity to meet the present and future needs of the institution. Such reservoir should hold not less than 600,000 to 700,000 gallons of water.

### Wards for Tubercular Patients

There having occurred during the last five years 430 deaths from consumption, the Board renews most earnestly its appeal for a special appropriation with which to build and equip four suitable wards for the proper isolation and treatment of consumptive patients. It is, of course, necessary to provide a separate ward for each sex, both white and colored. The medical staff of the Sanitarium is a unit in strongly urging that this humane provision be no longer delayed. The erection of such wards will not only provide the means for properly caring for this class of patients, but at the same time it will remove from the wards an ever present and ever increasing danger to the other inmates, this danger being very much greater than that among responsible persons. The Board recognizing the fact that for the care of this particular class of patients the ordinary requirements will not be sufficiently secure to afford the necessary protection or treatment, estimates that \$15,000.00 will be required for this purpose.

### Training School for the Feeble-minded

In the absence of special provision for them by the State the Sanitarium is required by law to admit the feeble-minded children who may be legally committed to it. Being primarily designed for the care and treatment of the insane, the pitiful injustice of such commitments is apparent. The Sanitarium is not equipped as a school, and all it can do for such cases is to provide shelter, food, raiment and protection. In all the State there is no place where such children can be sent for their proper training. The grosser types only are sent here. Others find refuge in the various orphanages of the State, but the majority are kept at home, where, unless carefully guarded, they fall an easy prey to the evil-minded about them. If not prevented they frequently marry, and the resulting offspring but increases the

menace to society, and the burden to the State. Suitable schools are provided by the State for her deaf, dumb and blind, but thus far she has done nothing for her feeble-minded children. Surely they have a claim equally as great as the others, and this sacred duty should be neglected no longer. The State should speedily gather them into a school properly equipped where they can be given all the training they are capable of receiving, and be fitted in some measure to contribute to their own support. The door of hope should no longer be closed to them, and the Board will be glad to see some action taken by the next General Assembly looking to the establishment of the "Georgia State School for the Feeble-minded," which shall have no connection with this institution.

### Epileptics Not Insane

As is the case with feeble-minded children, the State makes no special provision for her epileptic citizens, who are not insane, and requires the Sanitarium to receive all such who may be legally committed to it. A hospital for the insane is assuredly no place for them, and their presence in it is injurious no less to themselves than to the insane with whom they must associate. For this unfortunate class special provisions ought to be made. Our late Superintendent, Dr. T. O. Powell, felt very strongly on this subject, and his last report to this Board contained a strong appeal in their behalf. A life time of distinguished service in this institution to afflicted humanity gives to his words weight and meaning. In this report he said: "Epileptics are perhaps neglected more than any other class of the afflicted. Very little attention is given them until the disease becomes chronic and incurable. The most favorable time for the successful treatment is upon the first manifestations of the premonitory symptoms. They are to be pitied, and their appeals for help are strong and pathetic. They are shunned by friends; the doors of associates, entertainments of all kinds, and even the door of the church is closed against them. Is it then strange and surprising that they should become irritable and insane under such circumstances, and ultimately land in a hospital for the insane for life? If we

had a colony in Georgia where they could be systematically employed in various ways, receiving proper attention and diet, which is perhaps more beneficial than medical treatment, I think many would go to such colony in the early stages of the disease, and be restored to full and complete health, and then they could go out into the world and be self-supporting instead of a burden to the State their entire life."

Dr. Powell was well informed as to the opinions held by the best scientists of the age for the treatment of this most insidious disease, and it will be seen he urges that they be colonized by themselves. The Board hopes the way may be clear for the State of Georgia to follow in the lead of her sister States in caring for these afflicted ones in this way. Such a colony should have no connection with this institution. No better monument could be erected to the memory of Dr. Powell, and none would have gratified him more.

#### Funds Needed in 1910 and 1911

For the support and maintenance of the Sanitarium, and to enable it to make the necessary repairs and improvement in the buildings and equipment, which their growing age and use demand, the Board, in the exercise of its best judgment, asks appropriations as follows:

For 3,230 patients in 1910.....\$424,422.00

For 3,280 patients in 1911.....\$430,992.00

These estimates are based on a per diem cost per capita of 36 cents.

For the construction of an underground reservoir of 600,000 to 700,000 gallons capacity an appropriation of \$15,000.00 is asked.

For the erection and equipment of four wards for tubercular patients an appropriation of \$15,000.00 is asked.

#### In Conclusion

In conclusion the Board thanks your Excellency for the cordial support given it in the discharge of its duties;

and through your Excellency the General Assembly for its generous provision for the support of this great charity.

Respectfully submitted,

## Report of Superintendent

For the Year Beginning Jan. 1st, 1908, and Ending Dec. 31st, 1908.

---

Georgia State Sanitarium, Jan. 1st, 1909.

To the Honorable Board of Trustees, Georgia State Sanitarium:

Gentlemen—I respectfully submit for your official consideration the sixty-fifth annual report of this institution for the year ending Dec. 31st, 1908.

On Jan. 1st, 1908, there were white patients on hand, 2,178, and colored, 970. There have been received since, 567 whites and 380 colored, making a total reception of 947.

There have been discharged, removed, eloped and died, 983, leaving in the institution Jan. 1st, 1909, 3,112 patients, of whom there were 77 whites and 28 colored on furlough, not discharged.

The average number of patients under treatment during the year was 3,130, while the total number receiving treatment was 4,095.

It will be seen that the average number receiving treatment was 47 more than last year.

The actual number of patients on hand Jan. 1st, 1909, over the actual number on hand Jan. 1st, 1908, is 109.

From observation of the above figures it would appear that we have fewer patients on hand than we had one year ago as at that time it was reported that we had 3,148. This can be explained by showing the difference in the number on furlough. It has been the custom of the institution to extend furloughs on application by writing at the expiration of the usual ninety days; hence, some patients have had their furloughs extended every ninety days for the whole year almost, and at the end of the year still have their names on our books. For the last year we have adhered strictly to the ninety days' furlough; consequently at the end of the year

we are carrying none on our books who have been out of the institution over ninety days. At the end of the year 1907 our books showed 250 on furlough. At the end of the year 1908 they show 105—a difference of 145. This method of dealing with the furloughed cases makes our daily average show less than it has been showing heretofore; hence, tends to make our per capita appear larger than it would otherwise appear.

Our per capita per diem for the previous year was 34 cents, which included all expenses connected with the management of the institution—salaries, wages, maintenance, medicines, repairs, etc. For the year just ending it has been 34.7. With the increased wages we have paid some of our attendants, and the increased cost of supplies, our per capita would have been larger had we spent as much for improvements and repairs as we did the year previous. In the beginning of the year we were handicapped by a deficit of several thousand dollars, and could not carry on such improvements and repairs as we desired to. Had it not been for the timely aid we received at the hands of our generous and big-hearted legislators last July in supplementing our appropriations to the amount of fifteen thousand dollars, we could not have gone through the year without a large deficit. I am happy to report that we have closed the year with a balance of something over four thousand dollars to our credit. I feel confident that we will be able this year to make some very much needed improvements and repairs that have been delayed.

We very much desire to replace all of the old unsanitary water closets in both of the detached buildings and in the negro building. This being done we will be enabled to keep water on in all of the buildings both day and night. With the old automatic tanks this could not be done without a great waste of water, which we could not afford unless we had a greater storage capacity.

In asking for appropriations for the years 1910 and 1911 I trust you gentlemen will deem it of sufficient importance to ask for enough to build additional storage room for water as our institution has greatly outgrown our present capacity. We have the water, and now need somewhere

to store it for use in case of fire, or accidents to our pumping station.

Another improvement I would like very much to make in our buildings, and that is to have concrete or cement floors in all of our water closets and bath rooms with shower or rain baths to take the place of the tub. The board floors are so constantly kept wet they soon decay and let the water through to the plastering below causing it to fall off. This does not look well, besides being unsanitary. These two items will cost about fifteen thousand dollars.

The importance of segregating our tubercular patients has been brought to the attention of our General Assemblies so repeatedly without it having been given any serious consideration I almost feel embarrassed in mentioning the subject again. However, it is our duty, and we do not intend to let the subject drop until it shall have been given proper attention. The time is not far distant when more room will be needed, more especially in the white female and colored departments, and any room now made for the tubercular cases will relieve the present building to that extent, and delay the necessity for an appropriation for new buildings.

We have improved our dairy herd by adding twenty-five high grade Jersey cows and one fine registered Jersey bull. By order of the Executive Committee, our pathologist, Dr. D. G. Willets, made the tuberculin test of our entire herd last Summer, and the results of his findings are very gratifying. Only one or two cows showed any reaction, and we feel that we have as healthy a herd as can be found anywhere. The beef butchered from our herd was worth between fourteen and fifteen hundred dollars at our contract price, and practically paid for the new cows we bought. We have about completed one new barn with forty-six stalls, and I feel confident that it is as sanitary as one can be built. It is well ventilated, and the light is good. The floor is of concrete and cement, with a platform for the cow to stand and lie on, and concrete trough in front for the food, and one in the rear to catch the droppings. Both of these troughs have a slight fall from the ends toward the centre, where they are connected with an outlet so they can be washed as often as necessary to keep them clean.

By direction of the Executive Committee we employed an experienced dairyman. He commenced service in December, and we feel confident he will more than earn his wages in seeing that the cows are properly fed and milked, and cared for generally.

Our chef, Mr. D. J. Sullivan, resigned his position last October to take a similar one with the Government Hospital for the Insane at Washington, D. C. It was with regret that we gave him up for he was an excellent gentleman, and filled his position faithfully. Mr. John Sullivan, his brother, was appointed to the place, and is filling it very acceptably.

We have had no difficulty in filling any vacancy that occurred in the white male department during the last year, and had a better class of men to select from. Very few of our male nurses have left the service, and I feel that I would be safe in saying that, as a whole, we have a better class of men at this time than we have had at any time in the past. In the white female department we have had more difficulty in keeping the vacancies filled. Still, we cannot complain, for we have suffered less than formerly—the worst feature being the constant change of nurses. It takes some time for a nurse to become efficient and useful in this work, it is so different from ordinary nursing; hence, the longer they remain the better they understand how to get along with the patients. Quoting from Tuke & Bucknell: "Attendants for the insane are more than nurses for the sick. They keep watch and guard, are the instruments of order and discipline, and to a great extent the active agents of moral treatment. To their proper selection, training, and guidance the success of treatment, whether curative or palliative, security from harm or accident, and the general comfort and well being of the patient, are in a great measure due. The requirements we make upon their patience, endurance, temper and health are so great that their services when thoroughly good are well nigh invaluable."

In our training department for nurses we do not give certificates, but require all of the females to attend lectures regularly given by the medical staff, and that with the bedside training given by Miss A. V. Cross, our Superintendent

of Nurses, who is a graduate, fits them admirably for the service required.

### Colony and Garden

You will see from the report of our Assistant Steward what was done during the year at the colony and in the garden. At the colony we have about 80 or 90 colored male patients, who work on the farm. It does not require any more help to look after them than it would if they were idle. They much more than make expenses, raising all the corn we use for our stock, cane enough to make over a thousand gallons of syrup; over five thousand bushels of sweet potatoes; nearly a thousand bushels of field peas; about twenty-five hundred bushels of oats; forty bales of cotton; all the water melons we could use during the season; a nice lot of peaches and grapes; chickens, turkeys, and a good lot of pork.

In the garden about fifty or sixty of our white male patients work. They are glad to get out for the open air exercise. Of course, we do not compel any of them to work, and never allow them to overwork. We consider it the best treatment they can get when they are in proper condition for the exercise. Besides those mentioned above a good many of the male patients are employed in the dairy, kitchens, dining rooms, gradings, etc.

While directing some work on the water works system last fall, our engineer, Capt. T. H. DeSaussure, came near being killed by a colored male patient, who was assisting in the work. The patient took up a delusion that the engineer was about to attack him with a knife, and dealt him a blow on the back of the head with a sledge hammer felling him to the ground, and was about to renew the attack when arrested by the foreman of the work. I feel that the hand of Providence saved the life of our engineer for it was a terrific blow, calculated to crush the skull. His suffering was intense for a week or two, but gradually grew less, and he was finally restored to his usual health, we are thankful to say. We can never know what is passing through the mind of

the insane, and those who are not experienced do not realize the danger one is in who is constantly thrown with them.

The colored females engage in laundry work, and general house-cleaning and sewing. The white females help on the wards and dining rooms and do sewing.

### Harmless and Incurables

For the lack of funds we were compelled to refuse admission to a good number of harmless and incurable cases the first half of the year. After the Legislature gave us the supplemental appropriation we received all applicants except a very few who were very old, helpless and harmless, such as we could not do any good, and could be cared for at home.

### Law Requiring Ten Days' Notice Before a Patient Can Be Committed

While on the subject of receiving patients, I would like to call your attention to Section 2573 of the Code which requires that ten days' notice shall be given to three of the nearest adult relatives before a patient can be tried and committed to the Sanitarium. In many case this provision works not only a great hardship on the relatives and friends of the patient, but keeps the patient from receiving prompt attention and treatment such as one cannot get out of the institution, and perhaps such mischief may be done during that period as to render the case incurable.

I would respectfully ask you to consider the wisdom of having the law amended so as to allow relatives to waive ten days' notice in urgent cases, and allow them to be committed at once. It is not infrequently the case that a female member of some of our best families becomes suddenly insane and violent, and as the law now stands she must be held or tied and guarded day and night, or be sent to jail until the expiration of the ten days before she can be sent to the Sanitarium.

### Religious Services

By referring to the report of the Chaplain you will observe that religious services are kept up regularly every Sunday afternoon when the weather permits. These services are entered into by the patients, and seem to be a source of great good. Besides the Sunday services, the Chaplain performs burial services whenever one is buried here.

### Library

We have quite a good lot of books, magazines, etc., in our library, and are constantly receiving more. A good number of weekly and daily newspapers come regularly without charge.

The report of the Librarian will show the number of contributors for the year, and we wish to publicly thank each one who has so kindly remembered the institution.

### Amusements

We have not had the means to provide such amusements as we would like to have provided. The baseball team was not kept up during the Spring and Summer as it had been for several years past. The weekly dances have been continued, but we have changed the time to the afternoon instead of evenings on account of so many patients taking advantage of the darkness in going to and from the Amusement Hall to make their escape. Just before Christmas we had an amateur company composed of young men and young ladies of Milledgeville, with Prof. Wm. E. Reynolds as director, to come out and give us "Topsy Turvy," a play which our inmates enjoyed very much.

When our buildings are equipped with electric lights if we could be provided with a moving picture outfit I think it would afford more amusement and pastime than anything else for the amount of money required.

### Medical Staff

Dr. Y. H. Yarbrough, who had been serving as interne for some time, was elected Assistant Physician at the meeting of the Board last October, after having passed a satis-

factory examination. As I mentioned in the report for 1907 Dr. D. G. Willetts came early in January, 1908, and took up the laboratory work. His services have been satisfactory, and the Board elected him Pathologist at the October meeting. We have employed Dr. W. J. Cranston as interne, and he takes up his work on the first day of the new year. He comes to us highly recommended as being a "perfect gentleman, studious in his habits, and a second honor graduate in his class at the Medical Department of the University of Georgia." No other changes have taken place in the Staff.

I desire to express my appreciation of the faithful service rendered by the entire Medical Staff; also to every other officer connected with our institution I hereby tender thanks for faithfulness to duty, and co-operation in all departments. To our faithful nurses, and to all employees who have done their duty I would extend thanks and appreciation.

### Health

The health of the institution has been as good as usual with but few exceptions. It is my painful duty to report two suicides during the year, both of which have been reported to the Board before. One white male and one white female. The male patient had been in a state of deep melancholia and strongly suicidal for a long time, and had attempted to take his life before coming to the Sanitarium. He took his life by strangulation—tied his suspenders to the transom over the door, and then around his neck and suspended himself. When discovered life was extinct.

The female committed suicide by taking poison. She was rooming in the Infirmary ward opposite a surgical case, The nurse was preparing to dress the case, and with the dressings in the room was a bottle of bi-chloride of mercury solution. While the nurse left the room temporarily getting the dressings together, the patient slipped across to the room and poured enough of the poison into a snuff bottle she had to destroy her life, and was back in her room when the nurse appeared. The poison she had taken out of the bottle was not missed, and she secreted it until night, and took it after everybody was quiet and asleep. After the deadly poison had permeated her system, and she found

that her life was ebbing away, she called the night nurse and told her what she had done. A physician was called, but too late, and she soon expired. This class of patients is a source of great anxiety, and we feel thankful that we have no more cases than the two above mentioned to report. Very few serious accidents have happened considering the large number of patients under treatment during the year. We have had some broken limbs caused by patients falling or being pushed down by other patients, and one white male died from asphyxia caused by being choked while eating an apple.

From Dr. Longino's records we find that "beginning January 25th, 1908, there was a series of six cases of smallpox in the colored male department. The last case was discharged as well March 25th, 1908. Four of these cases were of the confluent type, and were very severe. Two cases were mild, having but few skin lesions. One of the cases died on the 12th day of illness with lobar pneumonia. Five cases recovered." The first case to have it was a patient who had been confined in the building for a number of years, and how he became exposed we do not understand. We try to keep all patients vaccinated, having a supply of virus constantly on hand, and requiring the Assistant Physicians to vaccinate all new patients as they come in; hence, we do not fear anything like an epidemic of smallpox. The six cases above reported were treated in the building as they appeared in different parts of the building, and so many had been exposed we felt that it was useless to move them out, but did move them all to one ward, and kept other patients isolated.

The number of deaths from tuberculosis was about the same in the white department as it was the year previous, being twelve males and fourteen females. In the colored department, the number increased in the male department from seventeen to thirty-one, and in the female department from twenty-eight to thirty-four, making the whole number of deaths from tuberculosis ninety-one. You will see from the above figures how important it is that everything should be done that is possible to stop the spread of this dread disease. According to our diagnosis we have had twenty-three deaths

from "pellagra"—two white males and six white females, one colored male and fourteen colored females. In my opinion we have had this disease for years, but have not called it "pellagra" because we did not know what to call it. I do not know that we will be any better off, for there has been no specific discovered to combat its ravages, so far as I know. It is said to be caused by the eating of spoiled "maize," and produces in persons afflicted with it a sort of intoxication. If this be the cause we had better be careful about eating maize, and if we find a case with any symptoms of the disease not allow any maize eaten at all. Assistant Surgeon C. H. Lavinder, of the Public Health and Marine Hospital Service, gives some of the symptoms as follows: "The disease usually begins with gastro-intestinal disturbances followed shortly by the erythema of the skin, and in a brief while there is more or less involvement of the nervous system. It is a slowly advancing toxaemia, the brunt of which, in the end, is borne by the nervous system, and each annual recurrence leaves a deeper and more indelible mark on the mental and nervous condition of the sufferer."

Dr. Walker has furnished me the following notes:

"Pellagra has existed in this institution for several years. The first case of which any record was made occurred in January, 1906. During the past year forty cases have been recorded among the negro women. Of these nine were suffering from the disease when admitted. In a few other cases the disease first became manifest a short time after reception.

"The ages of those afflicted ranged from six years to seventy-five years. The dates of onset of those cases originating in the institution were as follows: March 1, April 1, May 2, June 2, August 2, September 5, October 10, November 5 and December 3.

"This does not correspond with the experience of those in foreign countries. Of the forty cases above mentioned, three were removed by relatives. Of the remaining thirty-seven, twenty-three have died, eight are still under treat-

ment, and six have apparently recovered. The average duration of the fatal cases was sixty-two days.

"Stomatitis, dermatitis and diarrhoea constitute the chief physical phenomena. The nervous symptoms so commonly seen in the chronic form do not play such an important role in the acute cases although they are not always absent.

"The stomatitis usually begins with a reddening of the mucous membrane of the oval cavity. This is followed by the appearance of a dirty whitish deposit, which is most often first seen behind the last lower molar teeth. This deposit may extend more or less rapidly to other portions of the mouth.

"The dermatitis may begin as reddish elevated areas which pit slightly on pressure; or the process may be slower in evolution and the reddening but slightly marked. In the course of time the affected areas become dark in color, and eventually, the epidermis falls off leaving pigmented areas. The dermatitis is usually symmetrical on the hands and on the feet. This is not always true when it appears on the face and neck. In one case it appeared on the breasts. Blebs not infrequently form at the affected areas of skin.

"Diarrhoea is practically always present in the early stages, but constipation is often present later in the course of the disease. The movements number as a rule from three to seven per day in the beginning. Small amounts of blood and mucous are often seen in the passages at some stage.

"Slight elevation of temperature with increased pulse rate may be observed for the first few days.

"Tympanitis, pain in back and abdomen may be complained of. Vomiting may occur with onset or later.

"The deep reflexes may be increased, diminished or unaffected. Vaginitis occurred in 15 per cent. of the colored females.

"The association of intestinal parasites with the disease is a matter of interest."

Our death rate based on total number under treatment during the year shows 11 per cent., which is somewhat higher than the year previous. Our recoveries, based on the number of receptions during the year show 49 per cent.

This is a better per cent. than was shown the year previous.

For further details I respectfully refer you to reports made by our Pathologist, Steward, Assistant Steward, Matron, Engineer, Storekeeper, Book-keeper and other officers.

The statistical tables which follow will give in detail the movement of white and colored population.

In conclusion, I wish to thank you for the faithful service you have given to the institution, and to express my appreciation of your continued confidence and kindness toward me.

Yours respectfully,

L. M. JONES,  
Superintendent, Etc.

## STATEMENT—WHITE

In relation to the number of white patients during the year, or  
from January 1st, 1908 to January 1st, 1909

There were patients on hand, January 1st, 1908.....	2178
White male lunatics.....	826
White male epileptics.....	128
White male idiots.....	51—1005
White female lunatics.....	964
White female epileptics.....	142
White female idiots.....	47—1173—2178

There have been received during the year:

White males . . . . .	295	
White females . . . . .	272	— 567

Total number under treatment.....2745

There have been:

Discharged, restored . . . . .	31
Discharged, improved . . . . .	334
Discharged, removed . . . . .	19
Discharged, eloped . . . . .	5
Discharged, not insane . . . . .	2
Discharged, unimproved . . . . .	9
*Discharged, pregnant . . . . .	1

401

\*Brought to the institution in this condition.

There have died:

White males . . . . .	111
White females . . . . .	80— 191— 592

Leaving on hand January 1st, 1909.....2153

## CLASSIFICATION OF THE WHITES

White male lunatics.....	827
White male epileptics.....	115
White male idiots.....	49— 991
White female lunatics.....	1016
White female epileptics.....	106

## Report of Pathologist

---

GEORGIA STATE SANITARIUM

Milledgeville, Ga., Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent:

Dear Sir—I have the honor to submit herewith a report of the operations of the Pathological Department during the year ending December 31, 1908. The work has been conducted during the past year along the same general lines as heretofore, chief attention being given to Clinical Microscopy rather than to general pathological work. It was deemed advisable to add the routine examination of feces to the regular work of the laboratory.

During the year 38 autopsies have been performed, and 1,028 clinical specimens have been examined as outlined below. Some pathological and clinical work has been of such nature that it is impracticable to outline it in this report. Several gross specimens and a number of microscopic specimens have been added to the laboratory collection.

The major part of June and July was given to applying the tuberculin test to our herd in accordance with instructions from yourself and the Board of Trustees. Because of the time taken up with this work and rather prolonged illness on the part of the pathologist, considerable time was lost from the laboratory during the year.

TABLE No. 1  
Synopsis of Protocols of Autopsies

Case No.....	Race .....	Sex .....	Age .....	Mental ..... Diagnosis ...	Section hours after death...	ANATOMICAL DIAGNOSIS
397	C	F	31	Primary dementia	4½	Chronic ulcerative pulmonary tuberculosis. Chronic adhesive pleurisy. Fatty infiltration of the liver. Dilated stomach. Diffuse nephritis.
398	C	M	60	Organic dementia	14	General arterio-sclerosis. Softening of right optic thalamus. Pulmonary hypostatic congestion. Pulmonary emphysema. Diffuse nephritis.
399	C	F	50	Terminal dementia	13	Atheroma of aorta. Pulmonary emphysema. Pulmonary hypostatic congestion. Slight adhesive pleurisy. Diffuse nephritis. Fibroid uterus. Colitis.
400	C	F	40	Chronic mania		Atheroma of cerebral vessels. Valvular heart disease. Right-sided adhesive pleurisy. Fatty infiltration of the liver. Nephritis. Chronic cystitis. Cystic ovary.
401	C	F	62	Senile dementia	4	Mild grade of general arteriosclerosis. Right-sided adhesive pleurisy. Bronchitis. Nephritis. Chronic cystitis. Fibroid uterus.
402	C	F	16	Dementia praecox	2	Pulmonary emphysema. Pulmonary hypostatic congestion. Nephritis. Passive congestion of the liver.
403	C	M	66	Senile dementia		Cerebral cortical softening. Atheroma of cerebral vessels. Croupous pneumonia. Pleurisy. Pulmonary infarction. Syphilitic liver. Fatty infiltration of the liver. Nephritis. Ascites.

Case No....	Race .....	Sex .....	Age .....	Mental ..... Diagnosis ...	Section hours after death...	ANATOMICAL DIAGNOSIS
421	C	F	71		12½	Carcareous deposit in dura mater. Opacity of pia-arachnoid. Cerebro-spinal fluid increased. Aneurism of left internal carotid artery. Atheroma of cerebral arteries. Pericarditis. Valvular heart disease. Chronic adhesive pleurisy. Nephritis. Colitis.
422	C	F	24	Acute mania	9¼	Chronic ulcerative pulmonary tuberculosis. Chronic adhesive pleurisy. Fatty infiltration of liver. Nephritis.
423	C	F	75	Senile dementia	6	Cortical cerebral hemorrhage. General arterio-sclerosis. Chronic adhesive pleurisy. Valvular heart disease. Arterio-sclerotic kidneys. Cartilaginoid spleen. Herpes.
424	C	F	45	Chronic melancholia	15	Pulmonary abscess. Purulent pleurisy. Nephritis. Pyelitis. Cystitis.
425	C	F	70	Senile dementia	7	General arterio-sclerosis. Valvular heart disease. Chronic adhesive pleurisy. Purulent bronchitis. Pulmonary congestion. Arterio-sclerotic kidneys. Ascites.
426	C	F	32		1	Chronic ulcerative intestinal tuberculosis. Miliary tuberculosis of the omentum and mesenteries. Pulmonary congestion. Adhesive peritonitis. Ascites. Nephritis. Fatty infiltration of the liver.

TABLE No. 1—Continued  
Synopsis of Protocols of Autopsies

Case No....	Race .....	Sex .....	Age .....	Mental ..... Diagnosis ...	Section hours after death...	ANATOMICAL DIAGNOSIS
427	C	F	38	Chronic melancholia	4	Pigmentation of lower portions of upper and lower extremities. Chronic ulcerative pulmonary tuberculosis. Miliary pulmonary tuberculosis. Chronic adhesive pleurisy. Nephritis. Appendix retro-caecal.
428	C	M	45	Acute mel- ancholia	6	Pulmonary emphysema. Chronic adhesive pleurisy. Nephritis. Cancer of the stomach. Ascites.
429	C	F	58		5	Chronic ulcerative pulmonary tuberculosis. Tuberculosis of liver and spleen. Tubercular lobar pneumonia. Chronic adhesive pleurisy. General arteriosclerosis. Fatty infiltration of the liver. Nephritis.
430	C	F	69		3	Chronic ulcerative pulmonary tuberculosis. Chronic adhesive pleurisy. Valvular heart disease. Passive congestion of the liver. Nephritis. Cyst of the parietal lay of the peritoneum. Fifteen adult round worms. <i>Ascaris lumbricoides</i> .
431	C	F	24	Imbecility	9	Pulmonary tuberculosis. Left-sided purulent pleurisy. Right-sided adhesive pleurisy.

TABLE No. 1—Continued  
Synopsis of Protocols of Autopsies

Case No.....	Race .....	Sex .....	Age .....	Mental ..... Diagnosis ...	Section hours after death...	ANATOMICAL DIAGNOSIS
432	C	F	28	Acute mania	7	Atheroma of cerebral arteries and of the coronary arteries. Right-sided adhesive pleurisy. Nephritis. Dermatitis. Hyperemic areas in small and large intestine.
433	C	F	61	Chronic mania	5	Fracture of inner third of left clavicle. Chronic adhesive pleurisy. Pulmonary congestion. Fibroid uterus. Nephritis.
434	C	F	55	Imbecility	12	Irregularly scattered areas of dermatitis. Atheroma of coronary arteries. Nephritis. Hyperemic areas in stomach and colon.

The percentage of cases showing tuberculosis was 37.83, which is somewhat lower than percentages usually given in heretofore. The kidneys are found to be affected in 89.18 per cent.; this is a high percentage, but not surprisingly so when one considers the percentage of cases showing albumin in the urine upon admission. Atheroma and sclerosis was found in 56.75 per cent.

Valvular heart disease occurred in 18.91 per cent. of the cases. In addition to this two cases of valvular disease were found at autopsy during the pathologist's absence from the laboratory. One case, No. 409, which had a typical "button-hole" variety of mitral stenosis, also has posterior spinal sclerosis.

Gross lesions of the brain consisting chiefly of areas of softening were found in 8 or 28.57 per cent. of the 28 brains removed.

Other than the foregoing the following findings are worthy of special mention: Tabes dorsalis, hypertrophic cirrhosis of the liver, syphilitic liver, cancer of the stomach, a cyst of the parietal layer of the peritoneum, dilatation of the colon, aneurism of the left internal carotid artery.

# CLINICAL MICROSCOPY—TABLE No. 2 .

## Synopsis

Urinalyses . . . . .	466
Fecal examinations . . . . .	292
Blood examinations:	
Hemaglobin estimations . . . . .	27
White counts . . . . .	26
Red counts . . . . .	25
Differential counts . . . . .	61
For <i>Plasmodium malarie</i> . . . . .	16
Widal reactions . . . . .	13 168
Sputum examinations:	
For <i>Tubercle bacillus</i> . . . . .	96
For <i>Diplococcus pneumoniae</i> . . . . .	6 102
Total . . . . .	1028

## Urine

Of the 466 specimens of urine examined during the year, the vast majority were routine specimens from the white reception wards. As usual, most of the specimens received at the laboratory were the result of one act of micturition, and also the urine from a given patient was, as a rule, examined but once. For these reasons and for the additional one that nephritis and cystitis of the laboratory do not invariably correspond with those conditions as found by the clinician, it is deemed inadvisable to attempt to prepare elaborate statistics of this work. It is interesting to note the number of cases of albuminuria without cylindruria or pyuria which present either an amorphous or crystalline deposit; this is quite in keeping with the statement of some authors to the effect that the passage of these solids may cause an albuminaria.

TABLE No. 3

Number showing albumin with casts, pus, and reds.....	6
Number showing albumin with pus and reds.....	36
Number showing albumin with amorphous or crystal- line sediment . . . . .	48
Number showing casts without albumin.....	29

## Feces

Because of the prevalence of intestinal parasitism, especially uncinariasis, throughout the South Atlantic States, as reported by numerous physicians in the last several years, good reason existed for doing more fecal work in the laboratory than heretofore, hence the routine examination of the feces of admission patients was added to the ordinary routine examination of the urine. This naturally aroused interest in the subject of intestinal parasites so that more specimens of feces than usual were examined from selected cases. The positive findings (36.09 per cent.) of all cases examined fully justify this work and strongly indicate the continuance of it. It is true that relatively few heavy infections were found, but this fact does not argue against the importance of the work when the fact that we are dealing with a class of patients for whom there is so little treatment beyond that included in general hygienic and dietetic measures is taken into consideration. It is generally conceded, it is thought, that our greatest hope in treating the unfortunate insane lies in building up their general nutrition with the possibility that their mental condition will improve along with their physical improvement. Granting this, is it not indicated to remove from the intestinal tract parasites which are living there at the expense of the so poorly nourished host?

Again the parasites, though few in number and causing no marked symptoms in a given patient should be removed for the reason that such an infection is a source of danger to non-infected patients, many of whom may not be able to harbor even a mild infection without rather marked symptoms resulting therefrom.

Technic: Specimens are taken with a piece of cardboard and placed in a wide-mouthed bottle, which is provided with a tin top. Upon being received at the laboratory, ten cover slip preparations are made of each case. This is best done by placing two medium sized drops of distilled water upon each of five ordinary microscopic slides and mixing with these drops a small quantity of the specimen by means of a platinum loop, until a medium degree of milkiness is obtained. Two seven-eighth inch square cover slips are then used per slide and the ova or the embryos found in each cover slip are counted. This counting renders it possible to determine to some extent the degree of infection present and, also, how well an infection is responding to treatment. The use of a platinum loop, which is so easily sterilized, in preparing the microscopic specimens reduces the possibility of transfer of an infection from one specimen to another to *nil*.

An endeavor is made to use the same amount of fecal material in preparing each specimen so that a comparison of the various infections may be made. The material for the ten specimens is selected from various parts of the specimen received at the laboratory in order that the examination may be as complete as possible.

It might be thought that ten cover slip preparations are too many to examine from a given specimen. As a matter of fact, however, important infections have been found as late as in the ninth cover slip. During the past year two infections were not determined until the tenth preparation was reached.

Specimens are examined as soon after being passed as possible. For the ova of the various parasites an early examination is not absolutely necessary, but it is undoubtedly of considerable importance to examine a specimen as quickly as possible when looking for embryos of *Strongyloides*

*stercoralis*. Especially is this true if the specimen is from a constipated stool for disintegration of the embryos takes place very rapidly in such a case.

In the microscopic examination the light is reduced, a No. 1 eye piece, a one-third Leitz objective, and a mechanical stage are used.

Upon examining 29 patients, mostly children, from the 29th white female ward, 19 or 65.51 per cent. of them were found to be infected with one or more parasites. Most of these infections were evidently mild ones, but the examination of the blood of those infected with hookworms, *Uncinaria americana*, (13 or 44.82 per cent.) disclosed an anemia in almost every case.

During the year, 266 patients (292 specimens) were examined. Of this number, 96 or 36.09 per cent, were found to be infected with one or more parasites. Of the 96 patients infected, two (0.75 per cent.) had quadruple infections, five (1.88 per cent.) had triple infections, 17 (6.39 per cent.) had double infections, and 72 (27.07 per cent.) had single infections as follows:

TABLE No. 4

<i>Uncinaria americana</i> , <i>Trichuris trichiuria</i> , <i>Ascaris lumbricoides</i> , and <i>Strongyloides stercoralis</i> . . . . .	2
<i>Uncinaria americana</i> , <i>Trichuris trichiuria</i> and <i>Ascaris lumbricoides</i> . . . . .	3
<i>Uncinaria americana</i> , <i>Trichuris trichiuria</i> and <i>Strongyloides stercoralis</i> . . . . .	2
<i>Uncinaria americana</i> and <i>Trichuris trichiuria</i> . . . . .	6
<i>Uncinaria americana</i> and <i>Ascaris lumbricoides</i> . . . . .	4
<i>Uncinaria americana</i> and <i>Strongyloides stercoralis</i> . . . . .	2
<i>Trichuris trichiuria</i> and <i>Strongyloides stercoralis</i> . . . . .	4
<i>Ascaris lumbricoides</i> and <i>Strongyloides stercoralis</i> . . . . .	1
<i>Uncinaria americana</i> . . . . .	57
<i>Trichuris trichiuria</i> .. . . .	7
<i>Ascaris lumbricoides</i> . . . . .	3
<i>Strongyloides stercoralis</i> . . . . .	4
<i>Hymenolepis nana</i> . . . . .	1
Total . . . . .	96

From the foregoing table it will be seen that infection with the five parasites in question occurred as follows:

TABLE No. 5

<i>Uncinaria americana</i> (hookworm).....	76 times (28.57%)
<i>Trichuris trichuria</i> (whipworm).....	24 times ( 9.02%)
<i>Strongyloides stercoralis</i> (Cochin China worm) .....	15 times ( 5.64%)
<i>Ascaris lumbricoides</i> (eelworm).....	13 times ( 4.89%)
<i>Hymenolepis nana</i> (dwarf tapeworm).....	1 time ( 0.37%)
Total .....	129

It therefore follows that, while the per cent. of persons infected was 36.09, the infection per cent. was 48.49.

### Blood

Of the 15 cases (16 specimens) in which the blood was examined for the malarial parasite, 2 were found to be positive and 13 negative. It is obvious that the blood was examined but once in all cases excepting one.

A positive Widal reaction was obtained in 3 out of 9 cases (13 specimens) examined.

The pathologist was out of the laboratory during the greater portion of that part of the year when malarial fever and typhoid fever are most apt to occur.

Most of the blood work was done on cases of helminthiasis and, as already stated, an anemia was found in a number of cases. Quite the most interesting case upon which blood work was done was one which presented the clinical picture and the blood picture of Pernicious Anemia. The various examinations resulted as follows:

Date—1908	Hb. %	Reds	Color Index	Whites	Polymorpho-nuclear %	Small lympho-cyte %	Large lympho-cyte %	Eosino-phile %

10-23	100	5104000	0.98	7,600	58.68	29.55	9.33	2.44

Date—1908	Transi-tional %	REMARKS
1-21		No nucleated reds found. Microcytes and macrocytes numerous. Poikilocytosis marked.
1-27	3.11	Several megaloblasts and a lesser number of normoblasts present. Microcytes and macrocytes numerous. Poikilocytosis marked.
3-9		Nucleated reds present as on 1-27-'08. Poikilocytosis less marked.
4-21	3.00	No nucleated reds. Blood picture much improved.
10-23		Two normoblasts and possibly one megaloblast seen in counting 450 whites. General appearance of reds good.

I am indebted to Dr. R. C. Swint, of the Medical Staff, for the following notes on the case:

D. B. white male, age 31, weight 152; farmer. Second admission July 27, 1907. Physical condition good on admission. Patella reflex slightly exaggerated. Delusional. Attention, memory and idea-association fair; orientation good. At times excited; at others depressed. Said to be suicidal, violent and destructive. Diagnosis: Manic-Depressive Insanity.

In December, 1907, patient began to complain of loss of appetite and of weariness. Given Syr. Hypophos. Co. Drs. 2, t. i. d. In January it was noted that there was no improvement in the patient's condition. In addition to the above symptoms, he became jaundiced, slightly oedematous about the ankles. He complained of palpitation of the heart on the least exertion and had to be put to bed. His countenance was pale, the sclera had a pearly or glistening appearance and the muscles appeared soft and flabby.

January 26, 1908: T. P. R. 99.6° F.-112-20. Patient complained of a weak feeling, shortness of breath and a poor appetite; bowels loose; voided urine six times in 24 hours. At 5 p. m.: T. P. R.

100.2°F.-100-24. Began Liquor. Potass. Arsenitis, 3 gtts. in water t. i. d. with directions to increase 5 gtts. in dose in one week. Feces negative for evidence of parasitism.

Patient's temperature ranged between 99°F. and 100°F. until about February 12, 1908, when it became normal with an occasional rise of nearly 1°F. Fowler's solution of arsenic was given up to 25 gtts. t. i. d. without any unpleasant symptoms, but soon developed colicky pains and diarrhoea. Arsenic was omitted for a few days when treatment was renewed as before. Patient's condition steadily improved as the blood picture improved.

### Sputum

Of the 76 cases (96 specimens) examined for *Tubercle bacillus*, 12 or 15.65 per cent. were found to be positive. In this connection it may be well to state that only specimens of a doubtful nature are sent to the laboratory for examination.

Four of the six cases examined for *Diplococcus pneumoniae* were positive.

### Tuberculin Test of Herd

As reported to you in detail under date of September 1, 1908, the tuberculin test was applied to 325 animals during June and July with the result that not even one certainly positive reaction was obtained, though there were a few doubtful reactions. A detailed report of the test had been previously submitted to, and passed upon, by Dr. A. D. Melvin, Chief of the Bureau of Animal Industry, Washington, D. C.

I desire to express my thanks to you and to the various members of the staff of assistant physicians for uniform kindness shown me throughout the year.

Very respectfully,

D. G. WILLETS,  
Pathologist.

## Dental Department

---

Dr. L. M. Jones, Superintendent:

Dear Doctor—The following is a report itemizing the Dental Treatment and Operations of this department during the year, 1908.

Tumors removed . . . . .	2
Alveolar Abscesses Treated . . . . .	40
Diseased Anthrums Treated . . . . .	
Facial Neuralgia Treated . . . . .	
Periodontitis Treated . . . . .	21
Stomatitis Treated . . . . .	1
Pyorrhoea Alveolaris Treated . . . . .	5
Acute Odontalia Treated . . . . .	6
Anchylolosis Jaw caused by impacted 3rd Molars....	
Calcarious deposits removed.. Number of patients.	59
Pulps Devitalized, removed and cavities and pulp canals filled . . . . .	98
Putrescent Pulps removed, tooth treated, cavities and pulp canals filled . . . . .	51
Cavities filled with Oxphosphate Zinc.....	284
Cavities filled with Amalgam . . . . .	472
Cavities filled with Guttapercha . . . . .	2
Cavities filled with Gold.....	22
Crowns made . . . . .	11
Crowns reset . . . . .	1
Bridges made . . . . .	2
Artificial Dentures made . . . . .	7
Artificial Dentures repaired . . . . .	5
Hypersensitive teeth from erosion or attrition cau- terized with Nitrate of Silver, number of pa- tients . . . . .	3
Teeth Cleaned. Number of patients . . . . .	10
Teeth and roots badly decayed, ulcerative and of- fensive, extracted . . . . .	701
Number of patients during the year.....	998

## Remarks

During the year I have visited the wards, taking them in numerical order, examined the mouths of the patients and rendered such services as were feasible.

Very respectfully submitted,

J. C. RICHARD,  
Dentist.

## Report of Librarian

---

Milledgeville, Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent :

Dear Sir—Permit me to submit the following as my annual report for the year ending Jan. 1st, 1909.

Number of books and magazines at last report.....18,881

## Report of Matron

Milledgeville, Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent:

Dear Sir—With thanks to the officers and to my co-workers who have in any way aided me, permit me to submit the enclosed as my report from Jan. 1st, 1908 to Jan. 1st, 1909.

I would add that all repairing has been done for the institution, and all scraps and remnants put to a good use, and have been properly accounted for through Storekeeper's office.

Respectfully submitted, ,

MRS. J. M. DARNELL,

Matron.

Milledgeville, Ga., Dec. 31, 1908.

This is to certify that Mr. L. H. Andrews, Treasurer Georgia State Sanitarium, has on deposit in this bank subject to check at the close of business this day, Twenty-two Thonsand Four Hundred Twenty-one and 17/100 Dollars (\$22,421.17).

L. C. HALL, Cashier.  
The Merchants & Farmers Bank.

Attest:

Jno. T. Day, N. P.,  
Baldwin County, Georgia.

## Report of Chaplain

To the Trustees of Georgia State Sanitarium:

As Chaplain of the institution I have to report that the usual duties of said office were filled by me from November 1st, 1907, to November 1st, 1908. I held religious service every Sunday afternoon in each month unless prevented by good cause sanctioned by your Superintendent, and held funeral service for the dead when so ordered.

Respectfully submitted,

LAMAR SIMS.

## Apothecary Department

Milledgeville, Ga., Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent:

Dear Sir—The following is my report of Apothecary's Department from January, 1908, to January 1909:

It being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution. We have done so at all times when it was economy to do so, restricting purchases to chemicals and such specialties as were required by the physicians.

### Statement

The following is a statement of all expenditures, etc., of Apothecary's Department from January, 1908 to January, 1909:

Amount of drugs purchased, including all druggists' sundries, dental and laboratory supplies, etc., all preparations for fumigation, disinfecting and sanitary purposes, also all alcohol, wines and whiskies.....	\$4054.81
Amount of drugs sold to officers and employees.....	273.57
Amount of drugs on hand . . . . .	2874.75
Amount of fixtures, etc. . . . .	385.50
Number of prescriptions filled.....	33,220

Respectfully submitted,

D. S. CARRINGTON,

Apothecary G. S. S.

## Report of Engineer

---

Milledgeville, Ga., Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent:

Dear Sir—I have the honor to submit herewith my report of the workings of this department from January 1st, 1908, to January 1st, 1909.

Respectfully submitted,

T. H. DeSAUSSURE,

Engineer.

### Improvements

During the latter part of the year 1907 work was begun on a cow barn and a shelter for dry cattle. These buildings have been completed, and a three-room cottage built at that location for the dairyman.

Twelve hundred and sixty feet of two-inch cast iron pipe has been laid to carry water from the nearest point of our water mains to this dairy.

Work has been begun on the buildings at the old dairy which are to take the place of the cow sheds that are in bad condition and need renewal or removal. The woodwork of the first of these buildings is completed and we are now putting down the concrete floor. This building is one hundred feet, six inches long by thirty-five feet wide. It is built of wood on a brick foundation and will have concrete floor, gutters and feed troughs. It will be fitted with swinging iron stanchions and iron pipe partitions between the stalls. There will be stalls for forty-four milkers, and four box stalls, ten by fourteen feet, for sick cows and cows during the period of parturition. For the calves and the bulls a separate building has been built. This building is eighty-four by twenty-four feet. It is divided up into box stalls on each side with an alley way between and a hay loft overhead.

The two plats of ground on the east and west sides of the back yard of the T. O. Powell building have been plowed up, carefully cleared of all litter, leveled and put in such shape that the grass thereon may be mowed with a horse machine and the hay saved.

The equipment of the bakery has been much improved during the year. A three-barrel dough mixer and a flour sifter have been bought and installed. These are run from a counter-shaft driven by the fan engine. The change from hand mixed to machine mixed dough has resulted in a much better bread than was possible by the old method. A dough divider has also been placed in the bakery and rolls are now made each morning for breakfast in place of the cracker biscuit. The equipment of the bakery has been further improved by the addition of steel dough troughs and pan racks, all on casters, and a proof box.

We have placed a screen of brass wire around the lower end of the suction pipe of the raw water pumps at the water works. This is to prevent the clogging of the foot valve by pine straws and fine leaves coming through the coarser screen at the river end of the intake pipe.

A four inch relief valve and two automatic air valves have been put on the twelve-inch pipe line from the water works, and a small automatic air valve placed on the four-inch pressure line to the sedimentation basins.

Iron pipe railings have been put up around the exposed edge of the pump pit and down the stairway leading to the floor below.

The clear water basin at the water works has been covered with a light wooden roof to prevent the growth of algae and to keep out polluting matter.

A considerable amount of grading and terracing has been done on the grounds around the water works station and the place is much improved. There still remains much to be done along these lines, however, before the work is completed. This work has been done entirely by colored patients at times when they can be best used in that way.

We have laid a duplicate line of twelve-inch pipe across Fishing Creek and the low ground adjacent. This line of pipe is so connected with the main line that should either

one fail under water it could be cut out until repaired without crippling the service.

On open pavilion, twenty by thirty-six feet, has been built in the yard for female negro tubercular patients, and the water closets in the yard covered and connected to the pavilions by covered ways.

A road way has been made through the lawn between the storehouse and the female convalescent building.

The radiators of the infirmary ward in the T. O. Powell building have been independently connected to the steam heating system so that that ward may be heated at times when it is not necessary to have steam on the entire building.

The hothouse has been almost entirely rebuilt, raglazed and painted, much of it having rotted on account of the humid atmosphere it is necessary to maintain therein. New radiators have also been built in this building.

The 12x8x10 Worthington Duplex pump in the engine room of the T. O. Powell building, which was put in in 1876 as a fire pump, has been thoroughly overhauled and is now doing good service daily in pumping the water used at nights.

The 10x20 Fan engine has also been overhauled and a new governor put on. This engine has been doing work daily, except at such times as it has been laid up for repairs, since 1856.

Nine cottages have been reshingled during the year requiring one hundred and thirty-eight squares to be laid.

One of the eighty-gallon steam kettles has been taken from the kitchen of the Twin Buildings and added to the cooking apparatus of the negro building, and a sixty-gallon kettle put in its place.

The coffee urn of the Twin Buildings being too small for the number of patients at that place, a larger one (eighty gallons) has been bought and installed, and the urn removed has been added to the equipment of the negro building.

A new galvanied iron shell, brass cylinder washing machine has been added to the apparatus in the laundry.

A complete new set of brass tubes have been put in the water heater at the Green Building.

A latticed partition with double doors therein has been placed in the archway leading into the Amusement Hall, separating that portion of the building from the wards.

The parapet walls over the sun-rooms of the Twin building have been water-proofed to prevent the moisture entering through the brickwork staining the plastering.

The following painting has been done:

The hallways of the lower floor, five rooms and the stairways in the T. O. Powell Building.

Seven rooms and the hallway in the residence section of the female convalescent building.

The woodwork of the Amusement Hall.

Six bath rooms in the female convalescent building.

The entire woodwork and the walls of the cemented rooms of wards Nos. 1, 2, 7, 9, 10, 11, 12 and 13.

The water tower and tank at the Colony.

The walls and woodwork of seventeen cemented rooms in various wards not mentioned above.

The outside of one eight-room cottage.

The inside of one three-room cottage.

Forty dining tables.

Thirty-two bedsteads.

The cover of the clear water basin.

Besides doing the ordinary repair work of the institution, the following articles have been made in the several shops.

432 Coffins.  
140 Boxes for shipping coffins.  
2 Sink Drainboards.  
48 Tables.  
5 Lattice Doors.  
4 Hominy Paddles.  
1 Carving Board.  
4 Bread Peels for Bakery.  
1 Rolling Pin.  
1 Telephone Booth.  
8 Singletrees.  
1 Doubletree.  
3 Coupling Poles.  
1 Cart Shaft.  
2 Carry Logs.

9 Doors.  
11 Benches.  
1 Ox Yoke.  
1 Examining Table.  
1 Chicken House.  
3 Wagon Crates.  
6 Rooms floored.  
6 Rakes.  
2 Hog Troughs.  
1 Water Trough.  
1 Cabinet for records.  
4 Plow Beams.  
6 Pair Steps.  
1 Towel Roller.  
1 Music Stool.  
14 Commodes.

- 5 Trunks Varnished.
- 2 Shaft Bands Put On.

## Report of Steward

---

Milledgeville, Ga., Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent:

Dear Sir—I have the honor to transmit through you to our honorable Board of Trustees this, my report as Steward, embracing the period from January 1, 1908 to January 1, 1909.

Abstract "A" shows the overdraft brought forward from last year, the amount drawn from the State Treasurer for support and maintenance of the Sanitarium, together with a classified statement of the disbursements, and the balance, \$4,811.26, carried forward to next year.

Abstract "B" shows the expenditures on account of subsistence.

Abstract "C" shows the expenditures on account of clothing.

Abstract "D" shows the expenditures on account of fuel and transportation.

Abstract "E" shows total amount of officers' pay roll.

Abstract "F" shows total amount of employees' pay rolls.

Abstract "G" shows the expenditures on account of incidentals.

Abstract "H" shows the expenditures on account of medical supplies.

Abstract "I" shows the expenditures on account of contingencies.

Abstract "J" shows the expenditures on account of stationary and postage.

Abstract "K" shows the expenditures on account of special appropriation for waterworks.

Abstract "L" shows the requisitions drawn on State Treasurer for support and maintenance.

Abstract "M" shows the average number of patients from 1883 to 1909, and the per capita cost per diem and per annum.

Abstract "N" shows the cost of maintaining one patient for a year, month, week and day.

Our Storekeeper, Mr. W. H. Hunter, reports stock on hand, \$19,545.23.

Our Apothecary, Mr. D. S. Carrington, reports stock on hand, \$2,874.75.

Our per capita per diem is 34.7.

By reference to report of Mr. G. W. Hollinshead, Assistant Steward, you will ascertain results from garden, dairy, hogs, etc., also report of stock, wagons, implements, etc., on hand.

In compliance with the law, duplicate voucher of the expenses, accompanied by the required certificate, approved by the Superintendent and audited by the Board of Trustees, have been filed in the Executive Department in Atlanta. I have devoted my entire time as required by the rules to the Steward's work, and have to the best of my ability discharged the duties incumbent upon me.

Respectfully submitted,

LUCIUS J. LAMAR,  
Steward G. S. S.

# Abstract "A"

Shows all money received from State Treasurer with a classified statement of the disbursements from January 1, 1908 to January 1, 1909.

1909	Dr.

Abstract "N"

Shows Cost of Maintaining One Patient per Year, Month, Week and Day.

For one year.....	\$127.00
For one month.....	10.41
For one week.....	2.43
For one day.....	.34.7

## Report of Assistant Steward

Near Milledgeville, Ga., Jan. 1st, 1909.

Dr. L. M. Jones, Superintendent, Etc.:

Dear Sir—I herewith hand you my report as Assistant Steward for the year 1908 of the dairies, garden, farm, park and transportation, also statement of stock, wagons, etc. on hand January 1st, 1909. We have lost since the last report two mules and five milch cows. The stock are all in very good condition.

Very respectfully,

GEO. W. HOLLINSHEAD,

Assistant Steward.

## Sixty-sixth Annual Report

Of the Board of Trustees of the Georgia State  
Sanitarium.

---

Milledgeville, Ga., January 1st, 1910.

To His Excellency, Joseph M. Brown, Governor.

Sir:

The Board of Trustees of the Georgia State Sanitarium has the honor to submit herewith for your consideration its report of the conduct and management of this institution for the year ending December 31st, 1909, being the sixty-sixth year of its existence.

Inasmuch as this Board did not assume charge of the Sanitarium until December, 1909, due credit must be given the retiring Board for the larger part of the year's work, which includes several noteworthy improvements and innovations, mention of which is made in another part of this report.

In view of the past criticisms leveled at the Sanitarium the Board deems the time opportune to place before your Excellency a full statement of the needs which must be supplied to it if it is to fulfill its highest mission. Your careful attention is invited to this feature of the report.

Attached to and forming part of this report will be found the annual reports of Superintendent Jones and his subordinate officers, which give in detail the movement of the Sanitarium population and the expenditure of moneys for its support.

### Patients in Sanitarium

The Superintendent's report shows 973 patients received during the year, and that the deaths, discharges and elopements were 879, making a net gain of 94 patients. The total number now in the Sanitarium is 3,206. The daily average in the Sanitarium for the year was 3,159, while the

total number receiving treatment was 4,085. These figures, showing a population equal to many of the larger towns of the State, indicate the magnitude of the institution.

### Finances

Steward Lamar's report shows the total expenditures for the year to have been \$429,865.50, as compared with a total of \$400,188.74 in 1908. This sum was composed of the appropriation for the year of \$425,000.00, a balance forwarded from last year of \$4,811.26 and an overdraft of \$54.24. In addition to this overdraft, there were on hand at the close of the year unpaid bills for supplies, etc., amounting to \$4,500.00, which, if paid, would make the overdraft to be \$4,554.24.

Prorated among the patients, the annual cost of each was \$136.08, and the daily cost 37.28 cents, as against costs of \$127.00 and 34.7 cents in 1908. A careful analysis of the expense accounts shows this increased cost to lie mainly in the "Subsistence," "Wages" and "Incidentals" (covering work of Engineer's Department) accounts, and explained by increased cost of foodstuffs, of increased wages to some part of the attendants, and the repairs incident to the upkeep of so extensive a property. The Farm Steward's report shows substantial additions made to the food supply of the Sanitarium, and consequent saving in the cost of such to the State.

Careful and economical management are in evidence everywhere, and there appears not one unwise expenditure of the State's funds.

The Board is embarrassed in the beginning of its administration by lack of sufficient funds with which to meet the ordinary expenses of the Sanitarium. Beginning the year with a practical overdraft of \$4,554.24 and faced by the continued high cost of subsistence items, it is very evident the appropriations for 1910 and 1911 must be supplemented. The Board estimates that \$25,000.00 for 1910 and \$35,000.00 for 1911 will be absolutely necessary for ordinary expenses. If in addition the extensive repairs necessary to many of the buildings in order to place them in thorough sanitary condition is to be begun by this Board these

amounts should be increased to not less than \$75,000.00 for each of these years. The Board can care for all such items and can at the same time give to the patients a larger dietary, furnish them with ample remedial occupations and amusements, and add to the medical staff such additional physicians as are required, etc., if the daily allowance for the support of each patient be advanced to 50 cents.

### **An Important Innovation**

The office of Clinical Director was created by the retiring Board, and filled by the promotion of Dr. E. M. Green from the medical staff. Two objects were thus sought, one to increase the medical efficiency of the Sanitarium; the other to grant the Superintendent needed assistance in this important branch of the work, and at the same time give him more time for the administrative duties of his office. The care of more than 3,200 patients, the supervision of the employes needed for such care, and the general direction of all the Sanitarium affairs is not a light task. In the new book of rules adopted by the present Board the Clinical Director becomes the chief medical officer, next to the Superintendent, of the Sanitarium, and is charged with the reception, classification and treatment of the patients. He is required to devote himself to the maintenance of the highest state of efficiency of the medical department, and to give due study to the causation, treatment and cure of insanity. Clinics are held daily in his office. Histories and observations in each case are compiled under his direction. From this important innovation the Board confidently expects good results to flow. The first report of this officer, covering two months' work only, accompanying the Superintendent's report, gives some idea as to the nature of his work.

### **New Business Records**

The business records of the Sanitarium are being thoroughly revised and modernized by the Board, through the services of an expert accountant employed for this purpose. No fault has heretofore been found with their accuracy, but complaint has been made they were not intelligible to the

business men who have occasion to examine them in official capacity. When the revision is completed, it is hoped this criticism will be overcome. To add to the accuracy of its disbursement accounts it has been found necessary to add one or more accounts to those now prescribed by law. The advice of the Attorney General has been had in the matter, and no changes have been made which do not come within his ruling.

#### Wards for Tubercular Patients

Faced by the urgent necessity for making suitable provision for the tubercular patients, or else of denying such patients admission in the future, the Board immediately authorized the erection of suitable frame structures to be used as tubercular wards, conveniently arranged and built as cheaply as consistent with their purpose. This work is under way, and these patients will be transferred to them immediately on their completion. Approximately \$5,000.00 of the 1910 appropriation will be expended in this way.

#### The New Dairy Barn

The unsanitary condition of the two old dairy barns and the need of a third one made it appear wise to the retiring Board to consolidate all the milch cows under one roof by the erection of a modern, sanitary barn of ample size, supplied with silos and other equipment. This work has been done, and the cows are now comfortably housed amid clean surroundings. A competent dairyman was employed and placed in charge of the dairy. Under his direction, and by the addition of a few cows to the number, the year's supply of milk has been increased by 22,000 gallons. The vital importance to the sick of a good supply of wholesome milk makes this gain hard to over-value. The plans for the barn were prepared by Engineer DeSaussure, and the work done under his direction. The completed work reflects credit on his skill.

#### Electric Lights

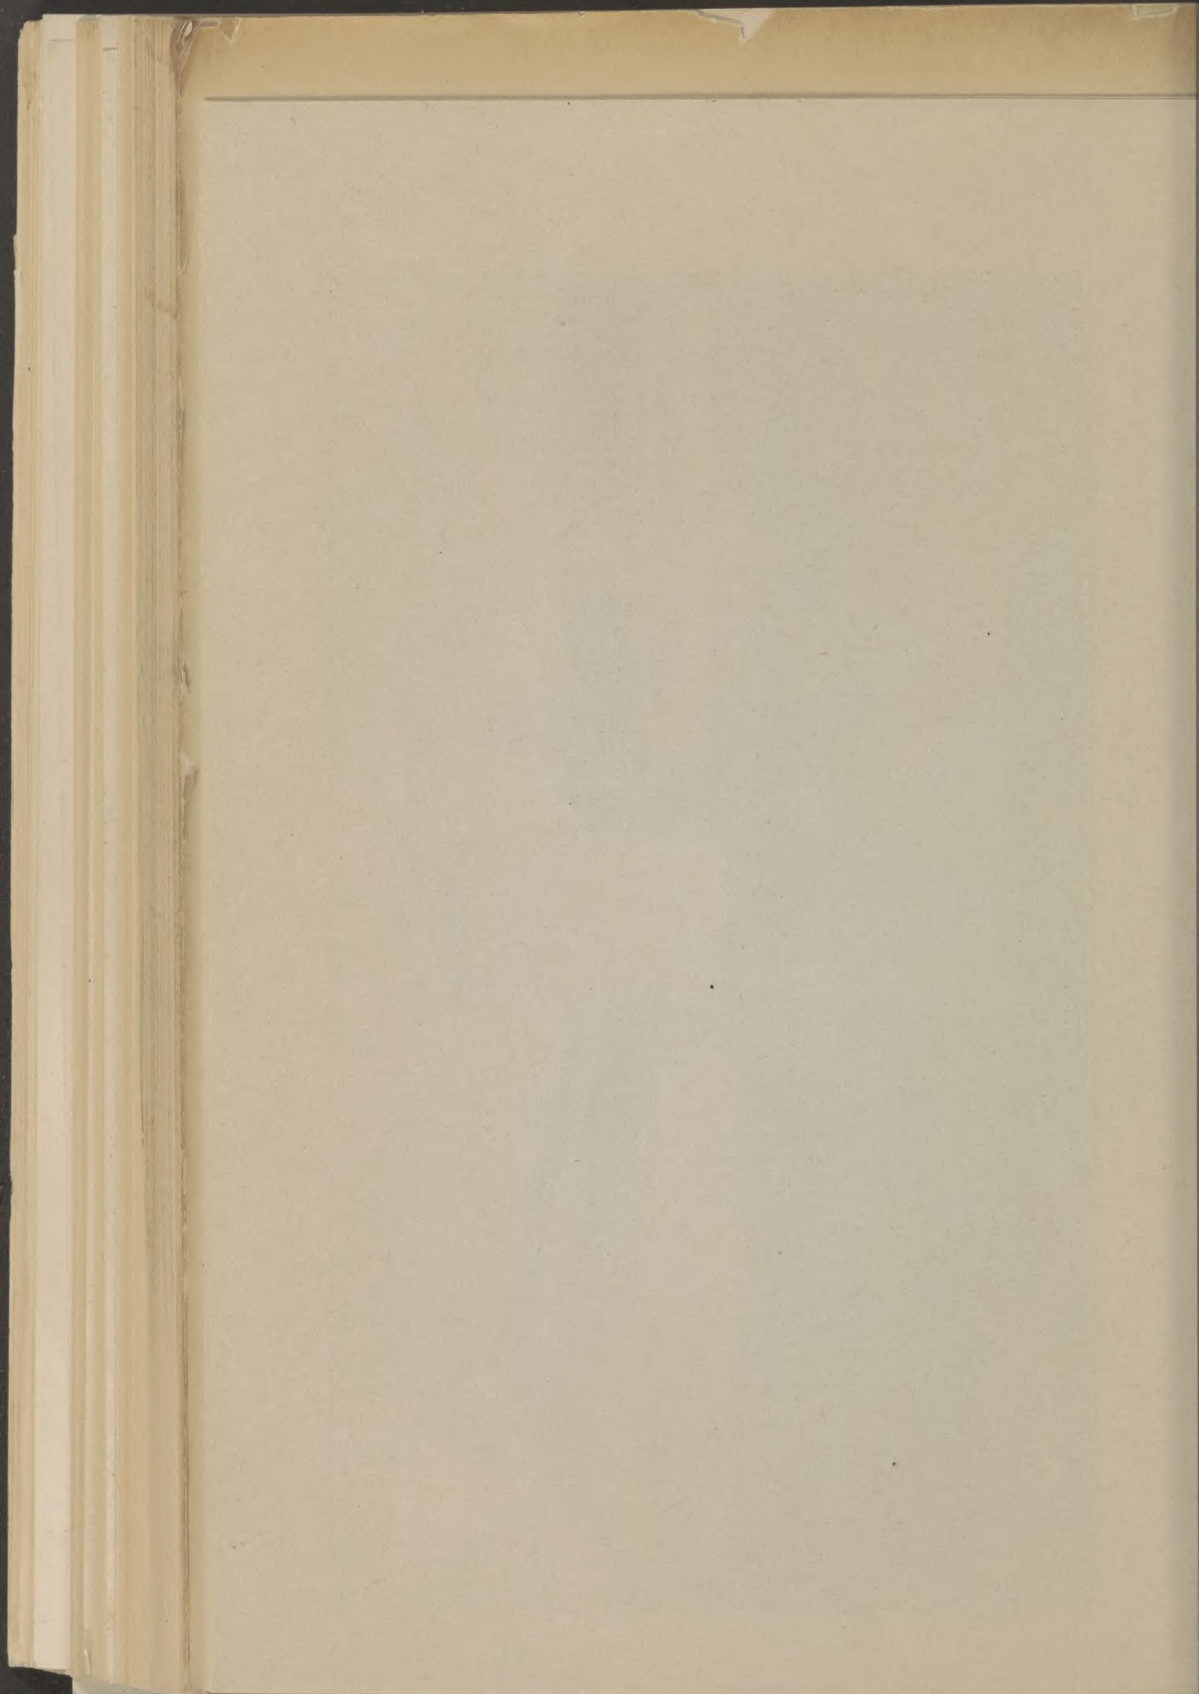

The Board finds the buildings and grounds of the Sanitarium fully wired for electric lights, this work having been

THE NEW DAIRY BARN AND SILOS.

THE NEW DAIRY BARN AND SILOS.

accomplished by the retiring Board under the plans and supervision of Engineer DeSaussure. The work has been thoroughly and economically done. All of the wires within the buildings are concealed in iron conduits, thus minimizing the fire risk, and at the same time protecting them from the patients. The current for the lights is obtained from a local corporation at reasonable cost. Several of the buildings not heretofore lighted are now supplied, greatly to the joy of the inmates. The unexpended balance remaining in the waterworks and electric light fund was used for this purpose, supplemented by so much of the general funds as was required. As soon as possible the State should supply the Sanitarium with an electric plant of its own.

#### Training School for Nurses

The new Book of Rules adopted by the Board makes provision for a training school for nurses. This school will begin work this fall. Certain studies are made obligatory upon all the nurses, but only those with an aptitude for the work will be encouraged to enter the school. Diplomas will be awarded those who complete the prescribed course of study. Graduates remaining in the service will be granted an increase in pay. It is hoped in this way to dignify the employment, and by rendering it more attractive draw a larger number of applicants from whom selections can be made.

#### Fire Protection

The protection of the inmates and property from fire has had the attention of the Board. The fire-fighting equipment appears adequate for all ordinary needs, but can be strengthened by the addition of a first-class chemical engine. The new waterworks furnishes an ample supply of water under good pressure, and, as long as no break occurs in the water main leading from the pumping station to the Sanitarium, answers every need. If, however, such a break should occur, the present small storage capacity on the grounds would be utterly inadequate to fight a serious fire. The Board, therefore, earnestly urges as a matter of the utmost importance that a reservoir of not less than

250,000 gallons capacity be at once supplied to the Sanitarium for fire-fighting purposes. The estimated cost of such a reservoir, built underground and of concrete, is \$15,000.00. Engineer DeSaussure is, by virtue of his office, the Chief of the Fire Department.

#### Enlargements Needed to Present Equipment

The main laundry is insufficient for the needs of the Sanitarium. Much of its machinery is old and needs replacing. More room is needed, and other machinery should be added. Upwards of 35,000 pieces of clothing are now passing through it weekly. The estimated cost by Engineer DeSaussure of this work, including the machinery, is \$8,000.00.

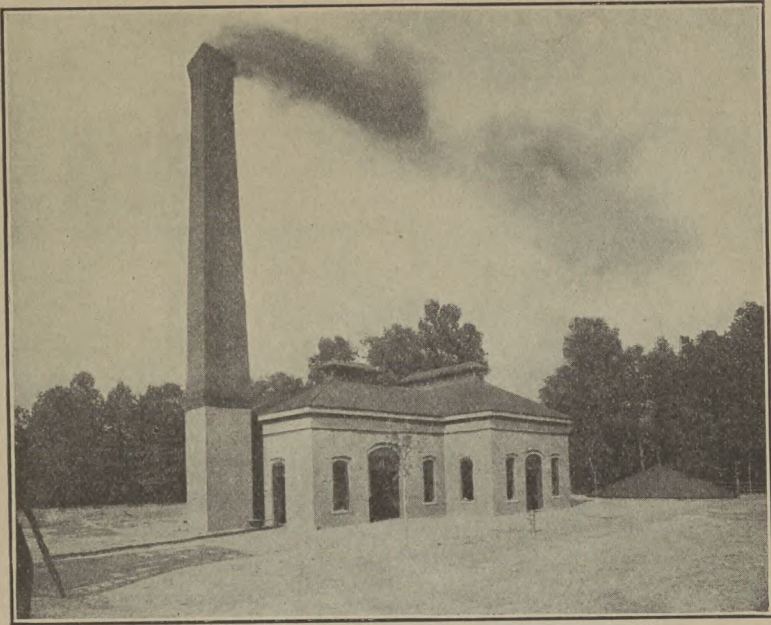

The kitchen and boilers of the Negro Building require the immediate attention of the Board. The kitchen now provides for upwards of 1,000 persons, and is entirely too small for the demand upon it. More room and more cooking vessels are urgently needed. The boilers supplying heat to the kitchen and to the building have been condemned and must be replaced the coming summer. This work is imperative, and cannot safely be delayed. The estimate by Engineer DeSaussure of the cost of this work is \$14,000.00.

The storeroom has grown too small for the demands upon it, and needs enlargement. Room should be provided in it for the use of the Engineer's Department. Repair materials should be stored in it, and issued in the same manner as general supplies. The estimated cost of this enlargement is \$2,800.00.

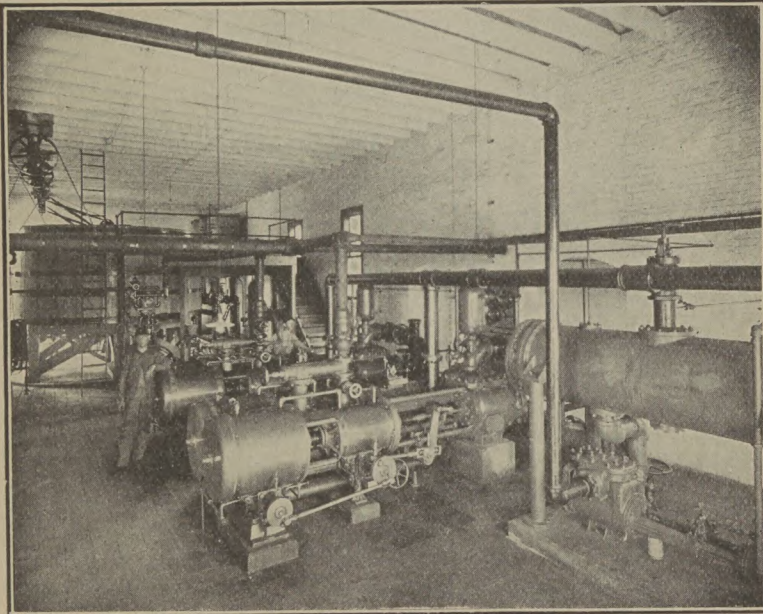

Track scales for weighing car load shipments, such as coal, etc., are not owned by the Sanitarium, and no facilities are possessed for checking the weights of such shipments. Negotiations with the railroad companies for supplying this need have been fruitless. The estimated cost of this addition is \$1,500.00.

The workshop has not been enlarged in years, and its size and equipment is out of all proportion to the present size of the Sanitarium and the heavy demands on it. More room and additional machinery are both required and should

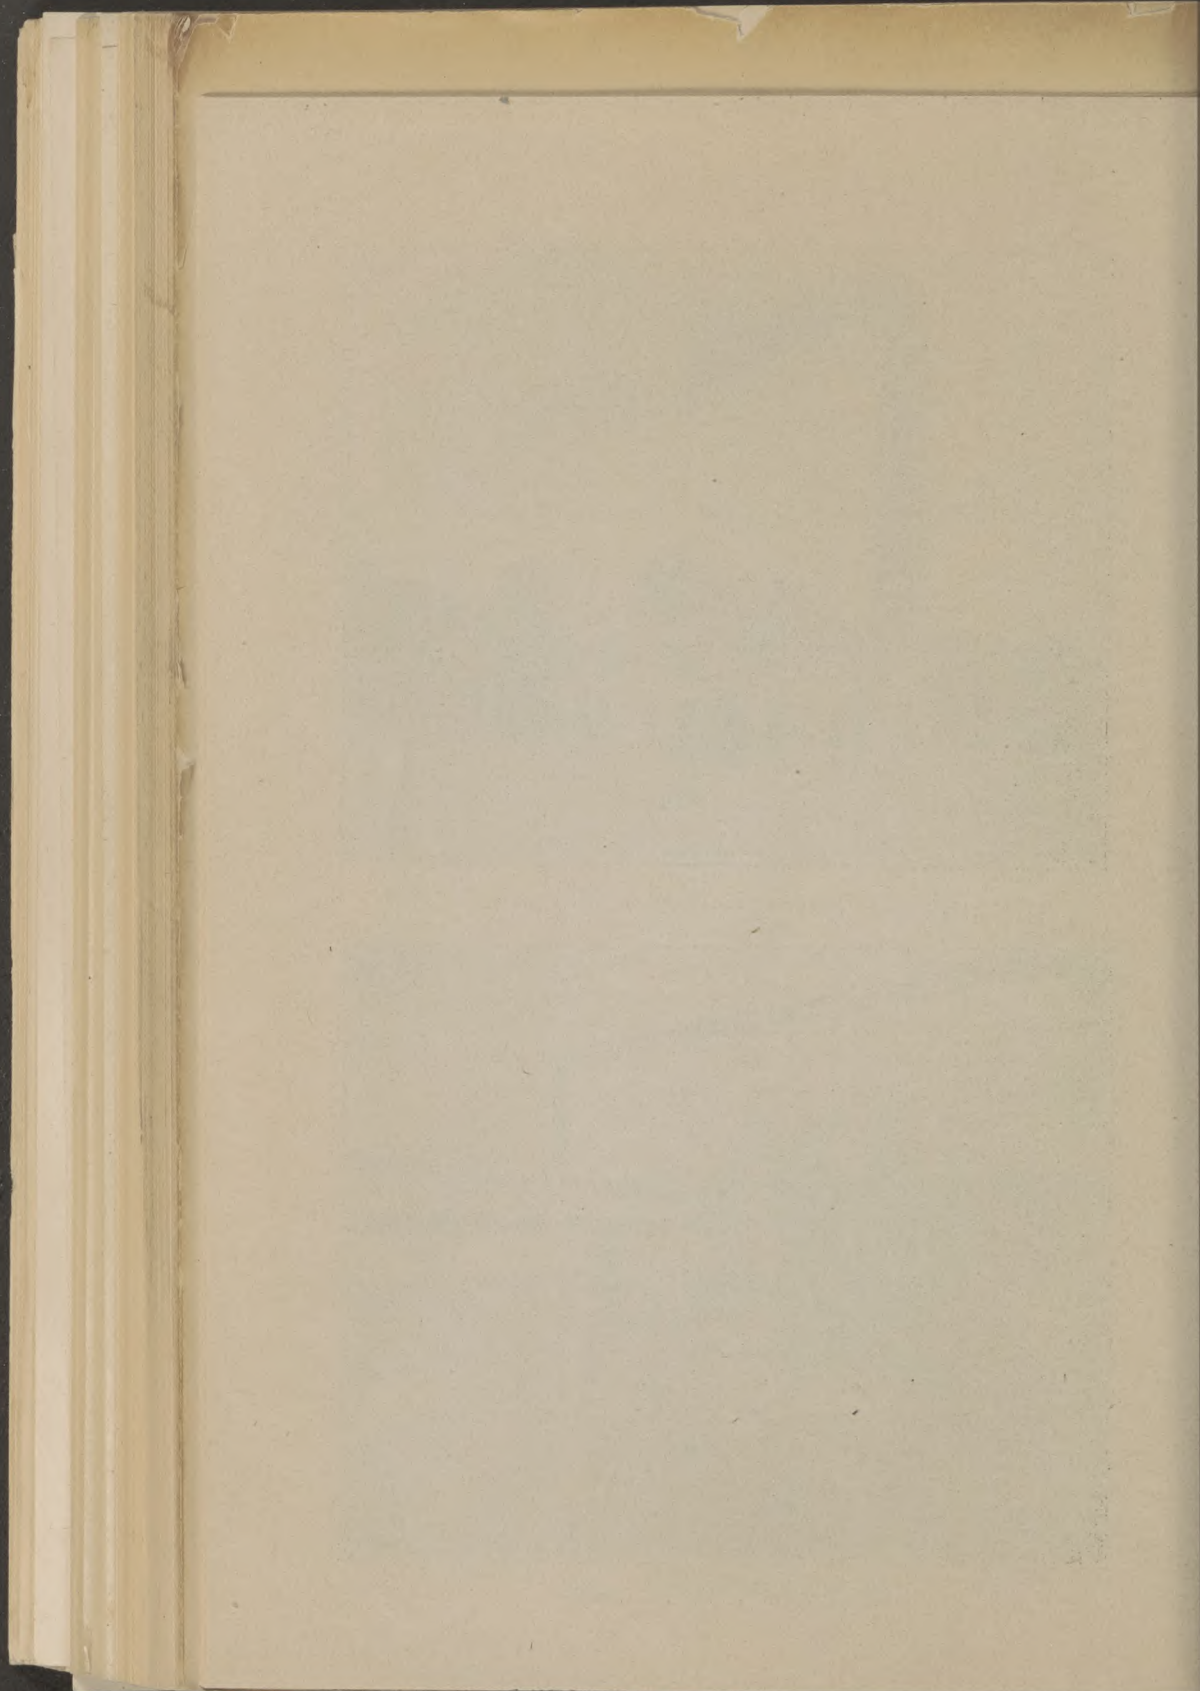

THE NEW WATERWORKS ON THE OCONEE RIVER.

INTERIOR NEW WATER WORKS.

be at once supplied. The estimated cost of this enlargement is \$2,500.00.

One wing of the Twin Buildings remains unfinished. Floors, etc., are needed for its completion, in addition to the furniture, etc. This work should now be done, and the wards therein, three in number, made ready for occupancy. The estimated cost of this work is \$8,000.00.

### The Function of the Sanitarium

To give each insane person committed to its keeping every chance of recovery that scientific treatment and humane care amid pleasant, gentle and homelike associations can afford to them is the great function of the Sanitarium. Its Book of Rules emphasizes this fact and lays upon every officer and employee the duty of gaining the confidence of the patients by means of courteous treatment, and the exercise of patience, gentleness, kindness and tact as an essential factor in their treatment. Its officers, and with few exceptions, its every attendant and nurse, have faithfully tried to meet this duty. Every means at the Sanitarium's disposal has been brought into play for their restoration to health. **Its greater efficiency is in the hands of the General Assembly.** Its present equipment and support are insufficient for its work. Certain modifications and amendments to the laws governing it are essential. Believing that out of the intemperate abuse heaped on the Sanitarium in the past year, arising from the disproven charges of a former patient who has since been recommitted to its care, good must in the end accrue, the Board now lays before your Excellency a careful statement of its needs if its greater efficiency and usefulness are genuinely sought.

The first of these needs is a more liberal appropriation, which should be based on not less than 50 cents per day for each patient. An appropriation on this basis will enable the employment of more physicians and nurses as needed; will grant a more diversified dietary to the patients; will provide for the material and equipment needed for the occupational treatment of the patients, now recognized as a valuable factor in the treatment of insanity; will make possible ample amusements and recreations for the patients.

In general, will make possible contributions to their health, happiness and comfort now necessarily denied them, and will at the same time provide for the extensive repairs needed to place the present buildings in good sanitary condition.

The next of these needs is to relieve the Sanitarium from the further commitment of a large number of patients who now not only drain its resources, but clog its progress and impede its work for the insane. The further commitment of senile harmless imbeciles should be at once stopped. This class are hopeless of cure, harmless to society and are just as well cared for at home. They are proper subjects for the custodial care of the Counties from whence they come, should aid be needed by them. In addition the Sanitarium should be relieved from the care of epileptics, especially of those not insane, and of the feeble-minded. The presence of both classes are hindrances to the treatment of the insane.

The last of these needs relates to the work of the Medical Department, around which the whole institution centers. This department is greatly hampered in its work by the lack of proper equipment, to supply which will cost much money, but from which, if supplied, good results may be expected to follow. Briefly stated, these wants are as follows:

1. **A General Hospital Building**, with proper equipment for the care of the sick patients. In it should be centered all the sick of the Sanitarium, diet kitchens and operating rooms. It should be remote from the other buildings, that proper air and quiet may be given the inmates.

On the five hospital wards of the Sanitarium are now 127 beds, all occupied. Many of the sick must remain on the wards. Caring for the sick entails a great deal of extra work on the ward attendants, who have not the training needed for the care of the sick, even had they the time. By concentrating the sick in one building, adapted to their needs, better attention can be given them.

The nurses in training will thus be given better opportunity to equip themselves for the care of the sick. This will be a valuable adjunct to the work of the new Training School.

2. **Building for Acute Cases.**—Recent and acute cases of insanity furnish the greater proportion of recoveries. Many of such cases being curable, they should not be forced to associate on the wards with the chronic, epileptic, filthy and demented. Such association is frequently repulsive and positively harmful. It gives rise to anxiety and despair, which lessens the chance of recovery. The reception wards now in use are not adequate for this purpose. All recent cases should be confined in bed, but this is not now possible. The present buildings are unsuited, nor can satisfactory changes be made in them. The Acute Building should be detached and separated from the others in order to secure the quiet and rest so sorely needed by these stricken ones.

This building should be equipped with a complete hydro-therapeutic outfit. The most skilled physicians in the service should be in charge.

These buildings will enable the patients to be supplied with the extra food so often needed by them without exciting the jealousy or ill will of the other patients. The wards can be made more attractive and so fortify the efforts of the officers and attendants to lead the minds of the patients into healthier channels.

The erection of this and the General Hospital Building will relieve the congested condition of the Sanitarium, and so add to the comfort of the other inmates.

3. **Building for Children.**—If the State does not relieve the Sanitarium of the care of the feeble-minded it will become necessary to provide a special building for their accommodation. The ward in which the boys are now confined is overcrowded. So, too, is the ward in which the girls are kept. Neither of such wards have proper bathing or toilet conveniences. A building for these young people should be equipped for their needs. As they are now situated, they have nothing to interest or amuse them, and bad habits are soon formed. It should be surrounded by ample yard space, so that large play grounds may be had. School rooms should be supplied and kindergarten teachers employed for their instruction. The Board earnestly hopes, however, suitable provision will be made for these unfortunate elsewhere.

4. **Colony for Epileptics.**—If the policy of the State is to remain unchanged, and the Sanitarium still compelled to receive this class, then it is due them that sufficient funds be supplied the Sanitarium for the purchase of enough farm land, and for the erection of the simple buildings needed, so that they may be segregated and removed entirely from the Sanitarium. Funds will be required, too, for the maintenance of such colony.

5. **Negro Building.**—The crowded condition of the present Negro Building makes it imperative on the General Assembly to provide more room for them. Accommodations are now needed for upwards of 300 patients. In the erection of such a building provision should be made for an amusement hall, or chapel, for the convalescent patients of this race. No such provision has ever been made for them, and they have been deprived, not only of the pleasure such a feature would give them, but of the weekly religious services. The cost will not be excessive, and such a hall would add much to the happiness of these poor unfortunates.

6. **Nurses Hall for Female Nurses.**—The duties of the female nurses are heavy. They go on duty at sunrise and remain on until relieved at night. They are locked in the wards on which their rooms are at night and resume duty again at daylight. The work at best is not attractive, and this necessity makes it less so. The securing of competent nurses constantly grows more difficult to the Superintendent. The Board believes the best ends of the Sanitarium will be served by the erection of a nurses' hall, to be occupied by them when off duty. It should be equipped with ample bed rooms, bath rooms, etc., and should be supplied with a good library and comfortable sitting rooms. Some consideration should be shown them by the State. Their wages are small, and such a hall, or home, appears justly due them.

#### **The State's Duty to the Epileptics**

The humane care of its defective and afflicted citizens is the fundamental duty of every civilized government. The State of Georgia has recognized this duty in the provision

made for her insane, her blind, her deaf and dumb, her disabled soldiers and her consumptives. She has not recognized her duty so far as her epileptics are concerned, save only that she allows their commitment to her insane hospital. With equal justice might she direct the commitment to it of the deaf and dumb. It is not less well adapted to the proper care of the one than the other. Their commitment to it does them a monstrous injustice and to the insane, with whom they must to some extent associate, a positive injury. They have as much moral right to have their peculiar needs humanely cared for as have the insane. The epileptics are perhaps the most sorely afflicted and pitiable of all the afflicted. They suffer from one of the most horrible of diseases, whose outward manifestations are alike repulsive and frightful to the ordinary observer. It causes them to be shunned by the well, closes to them almost every avenue of employment, makes them unwelcome guests at every social gathering, bars to them the doors of both school and church, and renders them practically social outcasts. The disease makes them irritable, suspicious, morose and subject to violent passions. Uncared for, unchecked and unhindered, grave crimes against society are frequently committed by them, and from their marriage the defective classes of the State are largely recruited. The interests of both State and society are conserved by their proper and humane care. In the belief an awakened public interest in these unfortunates makes their pitiful cases hopeful, the Board submits herewith such information as it has concerning their proper care.

The hope of this class lies in their scientific segregation, colony life and plentiful employment in the open air and sunshine. Plain farm buildings accommodating not more than twenty or twenty-five patients each, so that the home idea and life may be preserved, best answer their needs. Ample land for farm, gardens, orchards, etc., will be needed, together with such administration buildings as are required. A skilled physician should be in charge, and should have such assistance and attendants as the number of patients make necessary. The labor of the inmates, judiciously supervised, should be made to contribute not only

to their cure, but to their support as well. Most patients of this class make good colonists, and when so colonized are almost invariably improved, and made comparatively happy. Being similarly afflicted, they are bound by ties of sympathy, which tends to soothe their irritableness. They are helpful to each other in the terrible seizures to which they are subject. The insane and mildly demented epileptics are benefited physically by this life, though their mental condition may not be improved. For a large number of epileptics, however, whose mental condition remains sound or whose cases are of recent origin, the authorities are agreed there is hope, under the conditions set out herein, for complete relief. It is for this class especially the Board pleads. A State Hospital for epileptics and the transfer to it of the patients of this class now in the Sanitarium would afford it much needed relief and assistance in its own peculiar work. Conservative estimates place the number of epileptics in the State at 1 in every 500 of population. Approximately 370 patients, sane and insane, of this class are in the Sanitarium.

#### State Care of the Feeble-Minded

That it is the duty of the State to care for its feeble-minded admits of no doubt. This class includes the idiots and other mentally defective persons who are not insane. Such care is demanded not only by humane reasons, but equally so by the best interests of State and society. Their further commitment to the hospital for the insane should be tolerated no longer. In no sense does the Sanitarium meet their peculiar needs, and the gross injustice to them and to the Sanitarium in such commitments is apparent without argument. That they need the protecting arm of the State about them admits of as little doubt as does the nature of such care. The females of this type, unprotected, are the easy prey of dissolute men, and few are the communities which does not include one or more immoral females of this type, who are sowing trouble for both State and society in the years to come. Many of them are capable of some mental improvement if taken in hand early enough. Surely if the State owes a duty to the blind, and to the deaf

and dumb, she owes an equal duty to these defectives. But she must recognize the fact that not only is a school adapted to their peculiar needs demanded, but a home as well, for most of them must necessarily become inmates for life. The authorities consulted condemn severely the association of this class with the insane. From such authorities the Board has gained the information as to the proper and humane care of this class, which follows:

They should be segregated and colonized. Ample land for farm, gardens, orchards, etc., will be required. Inexpensive frame cottages, with large dormitory rooms, to accommodate from fifty to seventy-five persons, together with such kitchens, dining halls, school buildings, manual training building, quarters for the officers, etc., will answer its needs. A physician of some experience in the care of this class should be secured as superintendent. He should be supplied with such assistants, attendants, teachers, helpers, etc., as the number of inmates may require. Teachers of kindergarten training will be required for the school room and instructors of some skill for the work room. The inmates can be taught to contribute to some extent to their own support. The girls should be given domestic training, taught to sew, etc., while the boys are taught useful trades. Under such humane care and amid such favorable surroundings many of this class are capable of marked improvement, and their existence made vastly happier. The withdrawal of this class from the Sanitarium will be a welcome relief to it. The Board again renews its earnest recommendation for the establishment of a State School and Home for the Feeble-minded, to which this class shall in the future be committed. Careful estimates place the number of this class in the State at 1 in 500 of population.

#### Amendments to the Law Recommended

Looking to the best interests of State and Sanitarium, that in protecting the one the other may be advanced, and so the better do that for which it was created, the Board respectfully recommends the following amendments to the law governing it:

1. Amended so as to prohibit the commitment to it

of senile and harmless imbeciles, sane epileptics and feeble-minded children; Provided, that other provisions be first made for them .

2. Amended so that the three nearest adult relatives may waive the required ten-days' notice of a trial for lunacy.

3. Amended so as to permit the Board of Trustees to employ an attorney at law as its legal advisor as occasion requires.

4. Amended so that nine members shall constitute the membership of the Board; that at the first appointment three shall be appointed for two years; three for four years, and three for six years, and hereafter three shall be appointed every two years for a term of six years. The Sanitarium has grown too large and its interests too vast to intrust its management into the hands of inexperienced men every two years. This will not affect the present Board.

5. Amended so that any person who brings a patient to the Sanitarium and who shall, without the consent of the Superintendent, leave or abandon such patient on the Sanitarium grounds, shall be arrested and tried for the same in the courts of Baldwin County having jurisdiction in criminal cases, and upon conviction shall be punished as for a misdemeanor.

6. Amended so that in trials for lunacy or other causes authorizing a commitment to the Sanitarium, the Ordinary of the County shall preside over the Court, administer oaths and examine witnesses. He shall appoint a guardian ad litem for the person to be tried, and in every case shall cause the evidence to be taken down in writing and a certified copy thereof, in case of committal shall be sent with the patient, and that the Superintendent be authorized to refuse such patient unless a copy of the evidence be thus sent.

7. Amended so as to require an annual visit from the Ordinary of each County in the State having patients in the Sanitarium, to the Sanitarium to inquire into the care and condition of the patients from his County, the expense of such visit to be borne by the County.

8. Amended so as to change the name of the Sanitarium from the "Georgia State Sanitarium" to the "Georgia State Hospital for the Insane."

### Special Appropriations Asked

For the reasons set out in the foregoing parts of this report, the Board respectfully requests appropriations in the following sums for the purposes stated:

To supplement the general appropriation for the year 1910 the sum of \$25,000.00; to be increased to \$75,000.00 if the Board is to be permitted to undertake the extensive repair work now needed to place many of the wards in thorough sanitary condition.

To supplement the general appropriation for the year 1911 the sum of \$35,000.00.

For the construction of a water reservoir the sum of \$15,000.00.

For the enlargement of a kitchen attached to the Negro Building and the replacement of its boilers, the sum of \$14,000.00.

For the enlargement of the laundry the sum of \$8,000.00.

For the enlargement of the store room, the sum of \$2,800.00.

For the construction and installation of track scales, the sum of \$1,500.00.

For the completion and furnishing of the unfinished wing of the Twin Buildings, \$8,000.00.

For the erection and equipment of an addition to the Negro Building, furniture, heat, etc., the sum of \$100,000.00.

For the erection and equipment of a General Hospital Building, the sum of \$60,000.00.

For the erection and equipment of a building for the acute insane, the sum of \$100,000.00.

For the erection, equipment, etc., of a Nurses' Hall, the sum of \$30,000.00.

In default of other provision for the feeble-minded and for the erection of a children's building, equipment, etc., the sum of \$35,000.00.

In default of other provision for them, and for the erection and equipment of the necessary buildings, live

stock, furniture, farming and gardening implements, etc., necessary to the formation of an epileptic colony, the sum of \$30,000.00.

### In Conclusion

The Board thanks your Excellency for the courteous consideration shown it in the discharge of its duties, and commends to your earnest consideration the wants of this great charity as herein set out. Its work touches every part of Georgia, and interest in it is State wide. Every citizen it can restore to reason is a valuable asset regained by the State, and its needs to this end should be liberally supplied.

The retiring Board sent out a committee from its number to visit many similar institutions in the United States for the purpose of helpful comparison. The interesting report of this committee is published as an appendix to this report.

The commendations of the Board are due to Superintendent Jones for the faithful and efficient discharge of the responsible duties of his office. His wise management of the Sanitarium has the loyal support of his staff of medical and business assistants, and his faithfulness is matched by their fidelity. Amid all the trying experiences of the past year, harassed by underserved criticisms from without and embarrassed by lack of funds within, they have not failed to meet every duty imposed upon them. They well merit the entire confidence and sympathy of our citizens.

Respectfully submitted,

John T. Brantley, President.  
Henry Banks, Vice-President.  
Richard Johnson, Secretary.  
Thomas R. Wright, M. D.  
George S. Lowndes.

Board of Trustees.

## Report of Superintendent

For the Year Beginning January 1st, 1909, and Ending  
December 31st, 1909.

---

Georgia State Sanitarium, January 1st, 1910.

To the Honorable Board of Trustees,  
Georgia State Sanitarium.

Gentlemen:

I respectfully submit for your official consideration the sixty-sixth annual report of this institution for the year ending December 31st, 1909.

On January 1st, 1909, there were, white patients on hand, 2,153, and colored, 959. There have been received since 586 whites and 387 colored, making a total reception of 973.

There have been discharged, removed, eloped and died 879, leaving in the institution January 1st, 1910, 3,206, of whom there were 94 whites and 33 colored on furlough, not discharged.

The average number of patients under treatment during the year was 3,159, while the total number receiving treatment was 4,085.

It will be seen that the average number receiving treatment was 29 more than last year.

The actual number of patients on hand January 1st, 1910 over the actual number on hand January 1st, 1909, is 72.

Our per capita per diem has been 37.28 cents, which includes every expense connected with the management of the institution—salaries, wages, maintenance, medicines, repairs, etc. This shows a very economical expenditure of money—indeed, it is much less than ought to be spent to keep this institution abreast of the times and add to the comfort of our helpless and dependent inmates. I heartily indorse the recommendation made by the Board when the Legislative Committee visited us in November last, that the Sanitarium be given 50 cents per capita per diem.

With the small amount of money that we have had and the increased cost of living, we cannot furnish as great a variety of food as we desire to give our patients. They are furnished a wholesome and substantial diet, but we are not able to vary it enough and give them desserts. We have a large class of old, feeble people who are not able to eat a heavy diet. We have never been able to furnish all the milk we could use to advantage, but I am glad to say that within the last year we have increased the supply to about 22,000 gallons more than we had been getting previously. This is due to the improvement in our herd of cows and the better care they have had since the new barn and silos have been built. The cows have never been in as good condition, nor have they ever yielded as great a quantity of good wholesome clean milk.

Since our last report the cow barn, with 150 stalls, has been completed. It was made perfectly sanitary, as I described before, by building cement floors with trough in front of the platform on which the cow stands for the food and one in the rear to catch the droppings. These troughs have a slight fall from the ends toward the center, where they are connected with an outlet, so they can be washed as often as necessary to keep them clean. There is a swinging stanchion for each cow, and the stalls are separated by a small iron pipe in the shape of an elbow. With a nice bed of straw to rest on, the cows can be kept warm and comfortable the coldest weather, it not being necessary to turn them out to get water, as they can be watered in the barn. Three silos of about 200 tons each have been built. Two of them were filled last summer, and the third one was more than half filled, making more than 500 tons of corn silage. The silage has kept beautifully and is eaten ravenously by the cows. I am very much pleased with this experiment.

The droppings from the cows are now being carefully sheltered, and will be worth a great deal applied to these old, worn-out soils on which we have to garden.

The dairyman, Mr. H. P. Russell, has weighed the milk of each cow and kept a daily record, so as to know what they are doing. This is the only way to find out

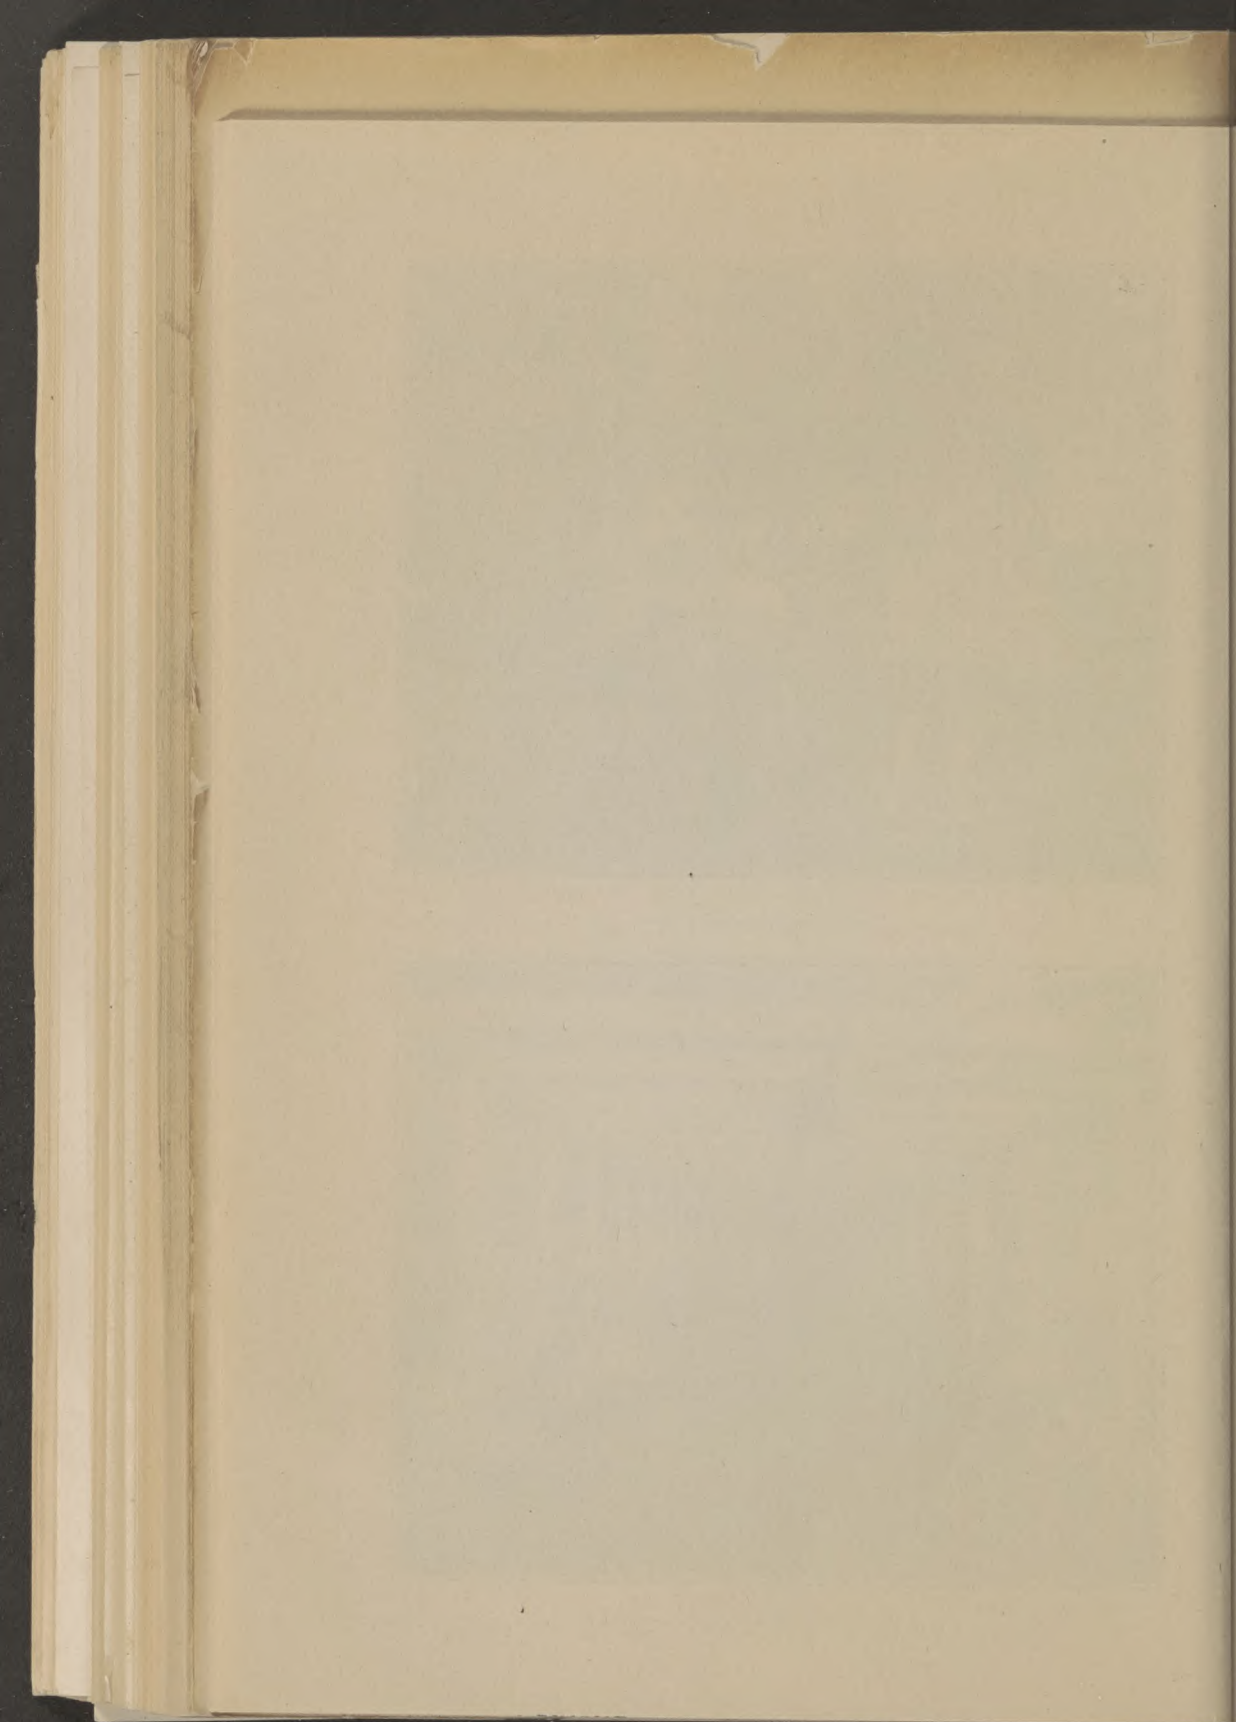

GROUP OF COWS

INTERIOR NEW DAIRY BARN

which cows are not worth feeding. Those that are not paying are being gradually weeded out. By this method, in course of time, we hope to have as fine a herd as can be found anywhere. I am anxious to have some registered stock, and with this end in view bought two fine Jersey heifers from a very reliable dealer in South Carolina, and one registered cow in this County, which cow has dropped a very fine heifer calf entitled to registration.

You will see from the Assistant Steward's report the cost and expense of running the dairy, which, being taken from the value of the milk at its market value, 30 cents per gallon, shows a net profit of about \$8,584.00. The cost of feed is all of one-third more than it has been heretofore, and we cannot buy milk for less than from 30 to 40 cents per gallon. Hence I think it right to give the dairy credit for the market price of milk. In connection with the dairy we should not fail to give our dairyman, Mr. H. P. Russell, due credit for his very efficient and faithful service.

### Finances

From the Steward's report you will observe that we have a small deficit of \$54.24. It was hard work to keep it down to this small amount, and it was only done by holding back some of the shipments of coal that we usually have made before the beginning of a new year. This is rather discouraging, when at the beginning of last year we had a surplus of \$4,811.26, and the appropriation is a little less for this year than it was last. Besides, we begin this year with about 90 more patients to take care of than we started with last year. Then, too, the cost of living has greatly increased. It will simply be impossible for the institution to be taken care of on the present appropriation. We have been compelled to employ three more physicians owing to the increased number of patients within the last three or four years, and as we are now keeping a more complete record of all new patients, have to employ more clerical force, adding at least \$4,000.00 to our ordinary expenses. Then we have been compelled to increase the wages of our colored attendants. Their wages have been the same for many years, and they cannot live on such wages. They are

not now getting what they ought to have, but are remaining at their work, hoping that the State will be more liberal toward this institution, and that we shall be able to give them something like what their work is worth.

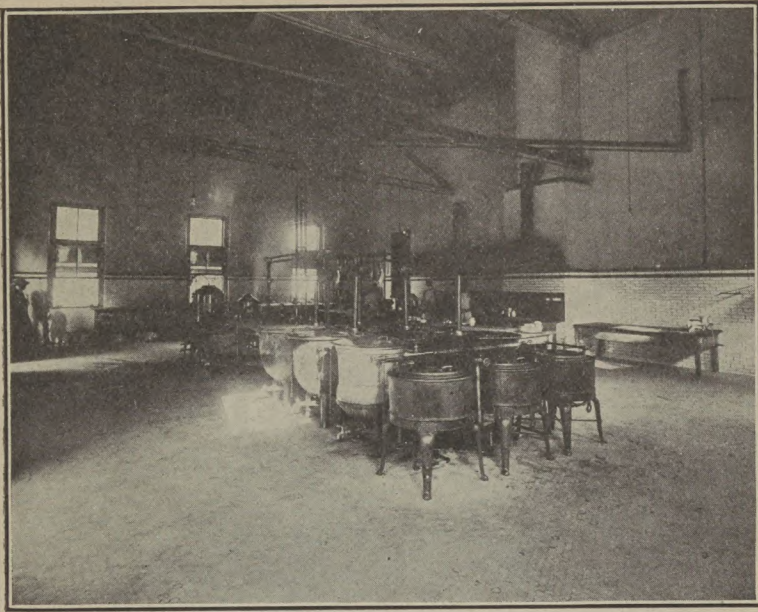

The demands for improvements in many of the departments are very urgent. At least six or eight thousand dollars ought to be spent in improving the laundry. Some of the washing machines that have been in use for twenty-five years are still being used. They are too small and are constantly breaking down, and should be replaced by larger ones. There are nearly three times as many patients to wash for as there were when these machines were put in. Think of having to launder about 35,000 pieces every week and you may get some idea of the great amount of work to be done. There should be a separate machine, a sterilizer, for all of the soiled clothes to go through before they are put into a regular washing machine—the soiled clothes never being allowed to go into the laundry proper until they have been sterilized.

The boilers at the Negro Building need replacing and the kitchen enlarged. Our engineer estimates that it will take about \$14,000 to do this work. It is very urgent, or, rather, imperative, at least so far as the boilers are concerned, as the insurance will be refused after this summer if new boilers are not put in.

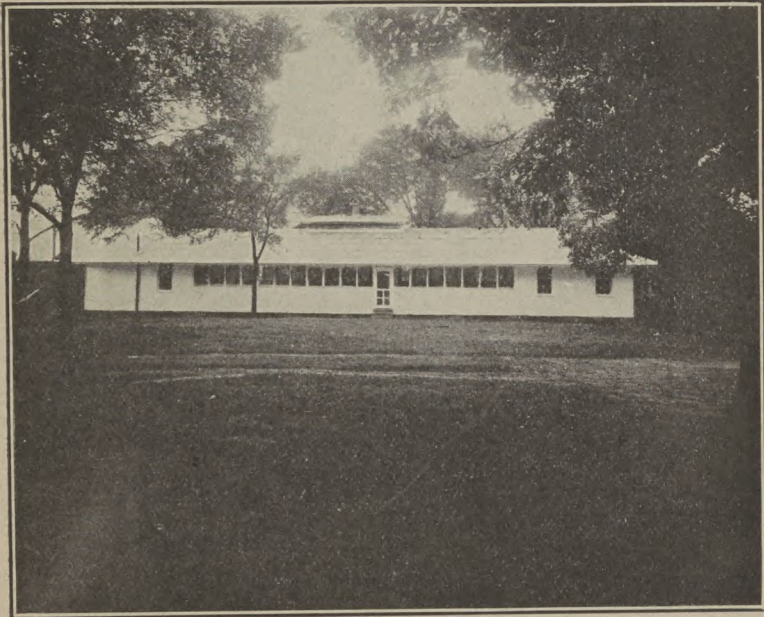

The wood and machine shops need to be enlarged, for they are all out of proportion considering the amount of work that needs to be done in them. This will cost between two and three thousand dollars.

The store room needs to be enlarged, which will cost at least \$2,600.00 or \$2,800.00. I mention these things that are absolute necessities to show you how badly we need more money. The amount appropriated for this year will not be sufficient to support the institution and allow this much needed work to be done. We were so far behind with repair work that we had to employ two additional carpenters and one plasterer. While speaking of repair work it is well to say that the T. O. Powell Building, being the oldest building, needs quite a good deal of work done on the interior to put it in good condition. The wards and

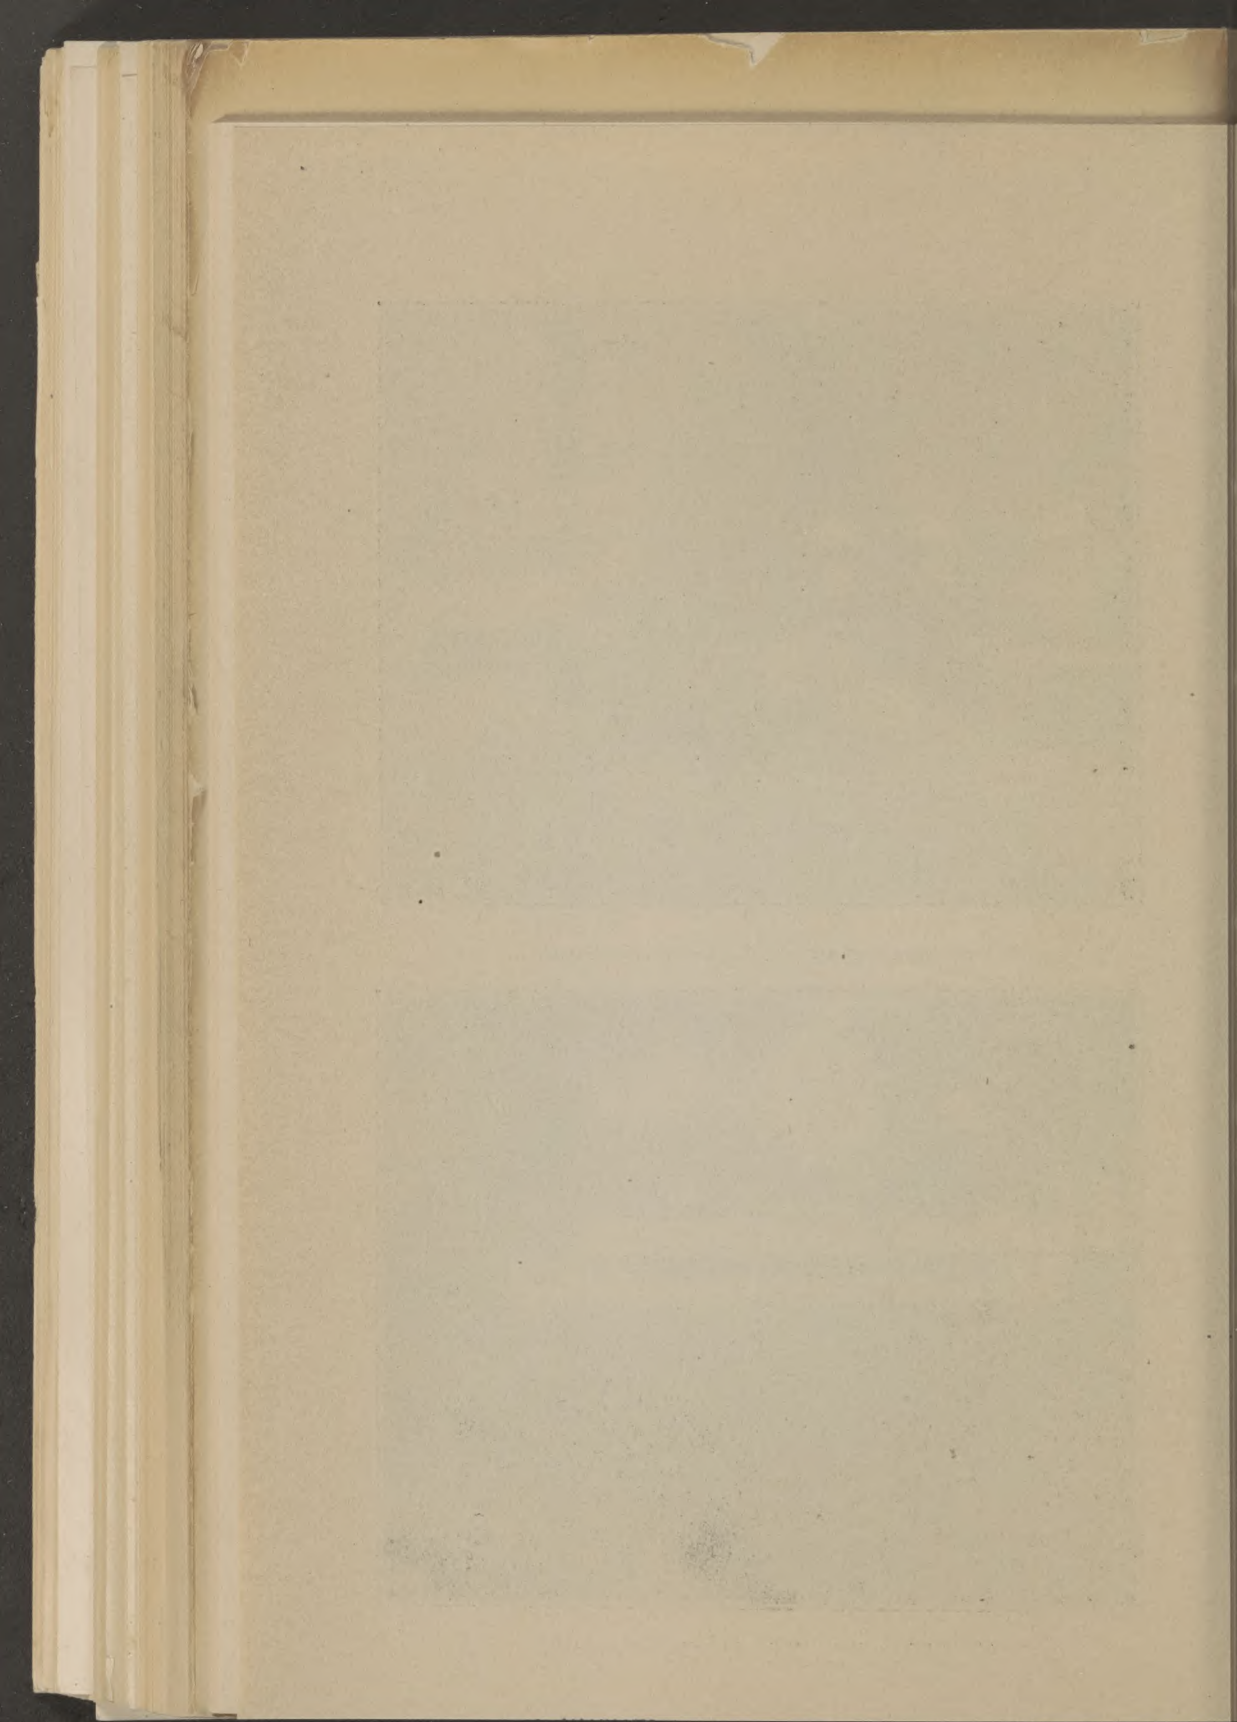

INTERIOR KITCHEN T. O. POWELL BUILDING.

ONE OF THE FOUR NEW TUBERCULAR WARDS.

rooms are plastered overhead, and the floors are so badly worn that whenever scouring is done the water goes through and wets the plastering and causes it to fall. It is a waste of time and money to patch the many places where the plastering has fallen off, for it soon falls again. I would recommend that the plastering overhead to those old wards be removed and wooden ceiling be put in its place; and that all of the old flooring be removed and new boards be put down. I would further recommend that all new floors be stained and waxed. This dressing would have to be renewed occasionally, but it would obviate the necessity for scouring and the dry rubbing so much with shuck mops, causing so much dust, which is a great nuisance, besides being such a prolific source of disseminating the deadly germ. All dust or dirt could be removed by using moist cloths. This, too, would save the cost of so many brooms.

We wish to repeat the recommendation that was made in our last report that every bath room and water closet should have cemented floors. It would be economy in the end, and so much more sanitary. There are in the institution quite a number of old rusty iron bath tubs that should be replaced with new sanitary tubs or shower baths.

There is one wing, consisting of three wards, in one of the Twin Buildings, that should be finished. One of these wards is very much needed to increase our room for the sick. Every ward in the two buildings is now occupied, and we have not enough room in the one hospital ward to accommodate the sick. A regular hospital building for all the sick, separate from the other buildings, where they would not be subject to the noise incident to all buildings for the insane, is what I would recommend. We have separate wards in the buildings very well equipped, doors and windows screened, good operating rooms, etc., for the sick, but at times there is enough noise on adjoining wards or wards near by to disturb the sick, and this cannot be avoided. The buildings are so large and so many patients in them it is impossible to classify them so as not to have some noisy ones in hearing.

The Negro Buildings, for both male and female, are very much overcrowded. We have about 200 more than

the normal capacity of the buildings. The day rooms have to be used for sleeping quarters at night, and this is detrimental to the health of the patients. More room should be provided.

We are again asking for an appropriation for tubercular wards. This has been the cry for a good many years, but the appeal goes unheeded. We can hardly get a living out of the regular appropriations, and have no money to build these extra wards. I believe the Board would be justifiable in refusing to receive patients afflicted with tuberculosis. They are frequently brought to the institution in the last stages, and having no separate wards to put them in, they are placed among the other healthy people, who are likely to contract the disease.

You would not receive a case of smallpox, and I would much rather have smallpox than to have consumption. Even some of the County authorities are refusing to receive criminals in their jails if they have tuberculosis. When will our State awake to a sense of its duty and provide proper care and protection for its unfortunate and helpless citizens!

In connection with the subject of contagious diseases, would call your attention to the fact that we are without rooms in the way of pest houses in case we should have an epidemic of any contagious disease. There is a one room house in the rear of the Green Building, now being used for the storage of old broken furniture, new bedsteads, etc., that might be used for patients from the Green Building, but it is not equipped with any conveniences—simply a great big room, weatherboarded, and not even ceiled. It was used once several years ago when male patients occupied the Green Building for isolating some cases of smallpox, but it is inaccessible to any other building. There is a four-room building in the rear of the Negro Building and one of about the same number of rooms near the Twin Buildings that might be used for this purpose if it became necessary, but they are occupied by our employes. They could be made available only by keeping them vacant.

Another important advance would be made in the way of treatment if we could have installed hydrotherapeutic outfits. A great many hospitals for the insane are using

these outfits for treating their inmates, and in many cases it far surpasses any other treatment that can be given. No hospital for the insane is properly equipped for the best work without this important adjunct. The acute insane is the class that needs this kind of treatment more than any other. Hence, some institutions have a separate building for the reception of all acute excitable cases, where they can get the benefit of hydrotherapy. I doubt if we could add this remedial measure to much advantage unless we had a new building constructed for the purpose. We have reception wards for all of the new cases, but frequently a violent noisy patient comes in and disturbs the whole ward. If we were able to give such a one a continuous bath it would be more soothing and quieting than anything that could be done.

It seems that our wants are never satisfied, but we have been taught to ask for what we wanted, and if we did not get it it would not be our fault.

In our last year's report we called attention to the necessity of having an additional reservoir for the storage of water. The capacity of the only reservoir that we have is so small as to bring about a serious situation in case of fire or accident to the pumping station or line of pipes. Our engineer estimates that such a reservoir as we need would cost about \$15,000.00.

During the year most of the old water closets were removed in the Negro Building and new ones installed. When the work in this building has been finished the plumbing in the whole institution will be in good condition.

The buildings and grounds have been wired for electric lights, and we have been using electricity for a month or more for lighting purposes. This is contracted for from the Oconee River Mills Company at a very reasonable price. Still, our lights will cost a good deal more than they ever have cost on account of having lights in the Negro Buildings, hospital and two detached buildings, in the dairy barn and stables, besides the grounds about the premises, these buildings and grounds never having been lighted before.

The wiring seems to be a first-class piece of work, and I think has been done in as safe a manner as possible, the

wires being carried through iron conduits, so as not to come in contact with any of the wood work.

This is a great improvement over the old gas lights that have been used heretofore, and I trust ere the present contract with the Oconee River Mills Company expires the Sanitarium will have a plant of its own.

A canning factory was put up at the Colony last spring, but we were disappointed in our fruit crop, and did not can any. We planted three or four acres in tomatoes, but the crop was very poor on account of excessive rains, and the worms, causing the tomatoes to spoil before ripening. Something over 3,000 three-pound cans were put up and they kept very nicely. We tried some corn and okra, but made a failure, as it spoiled. Trust we will be more successful the following season.

The crops at the Colony were as good as could be expected, owing to the seasons. Rains were rather excessive during the spring and up until August, when they ceased rather abruptly, causing a shortage in the cane, potato, pea and cotton crops. The corn crop was very good, yielding something more than 8,000 bushels. The oat crop was not as good as it would have been had it not been so badly killed during a very hard freeze the latter part of January, the only severe weather during the winter. While the potato crop was not as large as we usually make, there will be plenty to last us until spring, owing to the fact that they have kept better than for years. I attribute this to the complete change of seed. The usual number of colored male patients, about 80 or 90, work on the farm.

We had an epidemic among the cattle at the Colony last spring. The State Agricultural Department sent a veterinary surgeon to examine them, and he pronounced the disease anthrax. It seems to be highly contagious and deadly. The sick were isolated promptly and less than a dozen died.

We have about fifty or sixty white male patients who work in the garden. The work is not compulsory, and they are always under the observation of attendants, whose duty it is to see they are properly cared for. Some of the white males assist regularly in the dining rooms and ward work.

Some of the colored males work regularly in the kitchens, while others help about the dairy, grading and various other things. The colored females work in both the white and colored laundry, help clean the wards and do sewing, while the white females help with the ward work, and do a good deal of sewing.

There is no denying the fact that proper employment is among the best remedial agents we have for the mentally and nervously afflicted—though not applicable to all cases, nor is it curative in all cases. A certain class of cases need absolute rest. It is better to put them in bed and keep them there for weeks and even months. There is a large number among the mentally afflicted who will never recover under any treatment. That is why I say that occupation is not always curative—though it does aid in keeping one in better physical condition. I am frank to admit that I do not think as many of our patients are employed as ought to be for their own good, not to say anything about the benefit it would bring to the Sanitarium. There are several reasons for this: One is that we have no industrial shops where they could be employed; another is, a great many who would be benefited by proper employment are inclined to elope if they have the least opportunity—consequently they cannot be sent out from the buildings without a sufficient number of attendants to keep in close touch with them. A good many more extra men would have to be employed than we are able to employ if this was done. A third reason is a great many are not willing to engage in any kind of manual labor, or any other kind of labor as to that, without they are paid for it.

And then, frequently, relatives object to their doing anything. They do not even want them to aid in keeping their rooms in order. They say, "The State pays for their care, and we do not want them to work."

We are not able to buy vegetables and try to raise all we can, though our garden lands are very poorly adapted to the purpose.

Next to occupation, we are inclined to the opinion that amusements and entertainments are the most important factors as curative agents in a large number of patients.

Of course this applies to patients who are without organic lesions. Many cases need the best medical skill that can be provided.

I am sorry to say that we have not had the means to provide such amusements and entertainments as we feel would be beneficial to a large class of our patients. The weekly dances form the most prominent feature of our entertainments. During spring and summer they have baseball. On the wards some engage in playing cards, checkers, etc. I am not certain as to how practical it would be, but in my last report I suggested that when our buildings were electrically lighted the installation of a moving picture outfit would probably afford more entertainment than any one thing that could be provided. We now have the electricity, and I would recommend that we provide this form of entertainment. If we could have music on the lawns occasionally it would be a source of great enjoyment to the inmates. I failed to mention above that we have three pianos on some of our quiet wards for the females, and they enjoy them. Billiard and pool rooms would afford many a pleasant hour for quite a number of our quiet male patients. But all of these things call for money, more money! Will the State of Georgia appropriate it, or shall we have to continue to drag along in the same old monotonous life until we die?

#### Religious Services

Rev. Ford McRee performed the duties of Chaplain from November 1st, 1908, to November 1st, 1909. He preached in the chapel every Sunday afternoon and buried the dead—i. e., those who were buried here; a good many being sent home for burial. A good congregation is usually out to attend the Sunday afternoon services and participate in the singing, enjoying the services.

#### Library

Our Library is enjoyed by a good number of the inmates. It is placed in the Male Convalescent Building, but patients from any of the other buildings are allowed to visit it and get such books and magazines as they like to read.

The report of the Librarian will show the number of

contributions for the year. A good number of daily and weekly newspapers come regularly without charge, and we wish publicly to thank every one who has contributed books, magazines or periodicals.

An X-ray machine has been purchased and we trust it will prove of great value in examining fractures, dislocations and in searching for foreign bodies.

#### **Law Requiring Ten Days' Notice Before a Patient Can Be Committed**

In our last report we urged that this law be amended so that in certain urgent cases relatives may be permitted to waive this notice. In no case can this be done under the law as it now stands, and it works a great hardship in many cases, as they often have to go to jail and wait ten days before they can be legally committed.

#### **Attendants**

Since the high price of cotton and the greatly increased cost of living we have not been so fortunate in retaining our attendants. I speak more particularly of the white male department. A good many of them have families to support, and it is hard for them to live on the small wages they get here. We are taught "not to muzzle the ox that treadeth out the corn," and I believe that every working-man, it matters not in what field he labors, is entitled to a decent living. Let us trust that the day is not far distant when our appropriations shall be sufficient to allow us to pay these worthy servants of the State something like the value of their services. No one on the outside can know the hardships they undergo; the trying ordeals through which they pass, many times their lives being endangered by coming in contact with delirious homicidal patients and criminal lunatics.

Within the last few months a good deal has been published in the newspapers about the brutality and unworthiness of our attendants, but the source from which these libels emanated, if traced, could be shown to come from diseased imaginations, or from those who wished to slander. We do not claim perfection for all of our employes

—admit that some have been bad and had to be discharged for mistreatment of patients; but, taking them as a whole, I believe they are as good as any similar number doing similar work in any institution in this country. In speaking of the employes of this institution, I feel that I should not fail to mention the death of our faithful Supervisor, Mr. William Jackson. I do not know the time when he first connected himself with the Sanitarium, but I feel confident that he gave fifty or more years of his life to its service. I had known him twenty-six of these years, much of the time being thrown in daily contact with him while he was Supervisor in my service, and I can truthfully say that he was always loyal, conscientious and faithful to every trust. A good man has gone!

#### Medical Staff

At the October election all of the Medical Staff were re-elected, except Dr. E. M. Green, who was elected to the new position of Clinical Director, and Dr. D. G. Willets, our Pathologist, who resigned to accept a more lucrative position with the United States Government.

Dr. W. J. Cranston, who had been serving as interne since last January, was elected to a position on the staff.

We regret very much the loss of Dr. Willets. While doing all of the laboratory work, he had charge of three small wards, and his service was very efficient and faithful in both departments. He did a large work that had never been done before in this institution, examining the faeces for intestinal parasites, and his findings were astonishing! As yet we have not been able to find a man to fill his place, and apprehend that it will be a difficult matter to do so.

The election of Dr. Green as Clinical Director was a step in the line of progress. Only a few institutions of this character have Clinical Directors, but there are very few that are as large as this. While clinics were held weekly before, they are now held daily, and we are enabled to keep more elaborate notes and better records of the new cases and of the sick.

In this connection will add that the Board authorized me to employ three more physicians as internes, which will give us a better working force. Dr. J. I. Garrard and Dr.

Bernard Cline are now with us, and we hope to add the third man by the early spring.

Every new case that is received is given a thorough physical examination by the physician in charge of the reception ward, and then the whole Staff pass upon the mental condition, discussing all of its phases and make the diagnosis.

### Training School

For the present we have suspended the Training School on account of inaugurating the extra clinical work, but hope to reorganize next fall on a new basis. I have recommended, and I believe the Board agrees with me, that it is to the interest of the institution to have a regular curriculum, and give certificates of graduation. This will stimulate both the nurses and the physicians who lecture, and no doubt will make better service than we have ever had.

### Health

In the Clinical Director's report you will find state of health, classifications, etc., etc.

For further details would respectfully refer you to reports by other officers at the head of the different departments.

The officers have been faithful and efficient and have given me cordial co-operation in the management of the institution. The employees, with very few exceptions, have given good and faithful service, and are worthy of confidence.

Without your sympathy and support our burdens and trials during the last year would have been more than we could have borne.

I sincerely thank you for your cordial support and kindness and trust that I may always have your confidence.

Very respectfully submitted,

L. M. JONES,  
Superintendent, Etc.

## Report of Clinical Director

We are endeavoring to follow as nearly as possible the plan of work adopted by the Manhattan State Hospital, of New York.

In this attempt we are handicapped in many respects, not the least of which is that we have only ten physicians to care for 3,200 patients now in the institution, as well as to attend to the immense amount of work represented by the admission of about 1,000 new patients each year. That the work can be satisfactorily done by the small number of physicians is impossible, but we hope to demonstrate the need of a larger force and to improve the service in many particulars.

We have tried to concentrate our efforts on the reception service, as from the recent cases we expect the greatest proportion of recoveries. These wards are in charge of six of the physicians, though they form only a portion of the work assigned to each. On the reception wards a uniform system of examination is carried out. The new patient undergoes a thorough physical examination, and his mental status is investigated according to the outline prepared by Dr. Meyer and Dr. Kirby, of the Manhattan Hospital. Additional notes are taken as often as seems advisable, and after two months the patient is presented at the staff meeting, when a summary of the case is read and it is assigned, if possible, to a definite classification group. The number of admissions is so large that we are unable to have each patient presented for both a provisional and a final diagnosis, nor can the time be spared from other duties to go as deeply into every case as we should like to do.

The staff meetings are held daily and are a great factor in stimulating interest in mental diseases, as well as in the ordinary medical duties of the ward. At these meetings the physicians have an opportunity of seeing every patient admitted to the institution and of becoming familiar with the different forms of mental disease. A free discussion is encouraged, and each physician is called upon to express his opinion of the case presented and to give his reasons

for this opinion with the differential points to be considered. In this way the personal factor in diagnosis is avoided and points which might be overlooked by one are brought out by another. We hope by these careful examinations and free discussions to reach a more nearly correct grouping of our patients than we otherwise could do.

In the male departments, both for white and colored, we have separated the classes of patients according to their condition as quiet, feeble, epileptic or disturbed. The removal of the epileptic and the disturbed renders the situation of the other patients more pleasant and the resulting absence of noise and confusion should prove a factor in hastening the recovery of many.

During the year no especial record has been kept of the diseases occurring among the patients. We have had cases of typhoid fever in every department of the institution, male and female, white and colored, but in only a few instances did the disease develop in patients. Most of the cases occurred among the attendants, many of whom have families and friends in the neighborhood, with whom they spend a portion of their time, and doubtless the infection was received while on these visits. The number of cases of typhoid fever was, however, smaller than for several years past.

Quite a large number of cases of tuberculosis have been reported, this disease, with one exception, being responsible for the greatest number of deaths. Comparatively few cases are found among the white patients. The negroes suffering from tuberculosis are cared for in pavilions erected in yards adjacent to the buildings. Since they have been removed from the halls fewer cases have developed, many of those having the disease have greatly improved, while some seem to have made complete recoveries.

The number of cases of pellagra in 1909 was greatly in advance of that of any previous year, and to this disease we attribute more than 16 per cent. of our deaths. As with tuberculosis, pellagra is much more common in the negro department, especially in the wards for females. Many of these patients apparently recover, only to have subsequent attacks. Permanent recovery is quite rare.

Many of the cases reported appeared among those who were already inmates of the institution, but quite a large proportion of them were admitted with the lesions in the active stage.

It will be seen from the table giving the forms of insanity of those admitted during the year that six patients were reported as not insane. Two of these were white men who had come in conflict with the law and were sent to the institution, probably, with the object of evading punishment for their actions. Both were discharged into the custody of officers of their respective Counties. One was a young woman whose moral irregularities caused her relatives to have her committed, but in whom we could find no evidence of insanity. Of the three negro men reported as not insane, one was a criminal and was returned to the officers of his County. The other two probably were insane at the time of their trial for lunacy, but had recovered before they were brought to the Sanitarium.

In a subsequent table we find that the cause of death in one instance is given as asphyxia. This patient was a negro male. While eating his dinner a piece of beef became impacted in his larynx and death ensued before a physician could reach him.

We report the occurrence of three suicides. All of them were white males, two of whom were in the Convalescent Building. The first patient had been in the institution for nearly two years and suffered from manic-depressive psychosis of the depressed type. Before admission he had threatened suicide, but had made no attempt and had apparently improved a great deal since he came to the Sanitarium. He ended his life by means of a sheet, with which he hung himself. The second case was a young man suffering from infective exhaustive psychosis, who had attempted suicide before admission and who had been in the institution only twenty-nine days. He, too, had apparently improved both mentally and physically and had been transferred to the Convalescent Building only the day before his death. He ended his life while in his room, the night after the former suicide, using his belt for the purpose. The third patient was a young man 29 years of age,

a case of manic-depressive psychosis of the depressed type, who had been in the institution only fourteen days. He had spoken of suicide before admission, but had made no attempt to injure himself. The morning of his death he went to the attendant's room shortly before breakfast for his usual medicine and returned to his room. When he failed to come to the table with the other patients an attendant went to his room, where he found that he had hung himself, having stood on a chair and tied a towel about his throat, the other end being fastened to the transom of his door.

No record has been kept of the minor surgical work during the year. The table included in this report shows the number of operations of which there is a record. From this table it will be seen that four patients died following operation. One of these was a young woman, who had swallowed a number of pins, needles, glass and other articles, in consequence of which a severe gastritis developed. The operation was done for the purpose of removing the foreign bodies. She died within twenty-four hours from surgical shock.

The second patient was a negro man suffering from acute intestinal obstruction. On opening the extremely distended abdomen a volvulus was found, but portions of the intestines were gangrenous, and his death followed in a short time. The third case was one of suppurative appendicitis in a young woman, who suffered from dementia praecox and who was not known to be ill until a short time before the operation was done. A very large abscess was opened and drained, but death occurred the following day. The fourth case was one of strangulated inguinal hernia in a man 63 years of age. The intestine included in the sac was almost gangrenous, though the patient was operated upon about four hours after the condition was discovered. He did not regain consciousness and died in about two hours.

In rather a large number of instances the cause of death was not assigned. A number of these were cases of sudden death, and as no autopsy was allowed, the cause could not be given. With the exception of several fractures reported

in a later table, no serious accidents other than those already mentioned have occurred.

In reviewing the table giving the causes of insanity in the patients received it should be understood that the causes included are those **assigned by the relatives or the physicians**, who fill out the history blanks sent with the patient and really have little value. We hope to have a more reliable table of causes in the future.

From our table showing the forms of insanity in those received, we see that about 53 per cent. of our admissions are assigned to groups from which little can be hoped in the way of recovery. The custom of discharging patients at the expiration of furlough is responsible for the small number of recoveries we record. The greater number of our patients are discharged as "improved." This is due to the fact that it has been the policy of the institution to allow relatives of convalescent patients to take them home on furlough when it seemed safe to do so. If such patients do not return within ninety days they are discharged. Undoubtedly very many of those sent home in this way recover before the expiration of the furlough, but we are not notified of their condition and can only record them as "improved." Occasionally harmless, though unimproved patients are allowed to go home with relatives, and unless returned are discharged at the end of ninety days as "unimproved." In exceptional instances relatives are allowed to remove patients for the purpose of placing them in other institutions or that they may die at home when it appears that death is a matter of a short time. In such cases the patient is discharged as "removed." One patient was discharged by order of Court, the Judge before whom the case was tried deciding that the commitment was defective.

## Report of the Pathologist

Milledgeville, Ga., October 19th, 1909.

Dr. L. M. Jones, Superintendent,  
Georgia State Sanitarium,  
Milledgeville, Ga.

Dear Sir:

I have the honor to submit a report of the operations of the Pathological Department during the current year to date. The work, as heretofore, is composed chiefly of clinical microscopy.

During the year eight autopsies have been performed, 1,972 clinical specimens have been examined and a chemical and bacteriological examination of the water supply has been made.

Special attention is called to the truly alarming high percentage of patients showing the presence of intestinal parasitism. Some of the results obtained in these examinations during the past two years have been compiled in statistical studies.

TABLE No. 1.

## Synopsis of Protocols of Autopsies.

Case No.....	Race.....	Sex.....	Age.....	Mental Diagnosis	Section Hrs. After Death	Anatomical Diagnosis
435	W	M		Epilepsy.	11	Pachymeningitis. Cortical hemorrhage. Pulmonary emphysema. Pulmonary hypostatic congestion. Acute adhesive pleurisy. Fatty infiltration of liver. Fatty kidneys. Atheroma of aorta.
436	C	M	48		2	Partial. Meningitis.
437	C	F			2½	Multiple abscess of liver. Ulceration and inflammation of cæcum and colon. Nephritis. Cystitis.
438	C	F	56	Organic Dementia.	2¾	Cerebral hemorrhage. Softening right lenticular nucleus. Opacity of pia-arachnoid. General arterio-sclerosis. Arterio-sclerotic kidneys. Cystitis.
439	C	F	40		12½	Mitral stenosis. Colitis, with multiple ulceration. Nephritis. Cystitis. Peritonitis, old and recent. Pachymeningitis. Trichuris trichiuria.
440	C	F	27	Acute Melancholia	2½	Dermatitis of face and extremities. Entero-colitis. Adhesive pleurisy.
441	C	F		Imbecility.	12	Chronic ulcerative pulmonary tuberculosis. Chronic adhesive pleurisy. Tuberculosis of liver. Fatty infiltration of liver. Tuberculosis of intestines. Nephritis.
442	C	M	23	Imbecility.		Pulmonary tuberculosis. Miliary tuberculosis of mesenteries. Fatty infiltration of liver. Nephritis. Cystitis. Purulent pleurisy.

## CLINICAL MICROSCOPY

TABLE No. 2.

## Synopsis

Urinalyses .....	527
Blood examinations:	
Hemoglobin estimations .....	12
White counts .....	22
Red counts .....	12
Differential counts .....	13
For <i>Plasmodium malariae</i> .....	35
Widal reactions .....	24— 118
Sputum examinations:	
For <i>Tubercle bacillus</i> .....	90
For <i>Diplococcus pneumoniae</i> .....	5— 95
Fecal examinations .....	1,220
Miscellaneous examinations .....	12
Total .....	1,972

## Urine

As heretofore, the vast majority of the specimens of urine were routine specimens from the reception wards, and in most cases but one specimen was examined from a given patient. The results obtained from the viewpoints of albumin, casts, etc., are shown in the following table:

TABLE No. 3

## Synopsis of Urinalyses

Total number of specimens examined.....	527
Number showing neither albumin, casts, nor pus.....	103
Number showing albumin.....	401
Number showing albumin without casts, pus or organized sediment .....	180
Number showing albumin with casts.....	135
Number showing albumin with casts, pus and reds.....	5
Number showing albumin with pus and reds.....	37
Number showing albumin with amorphous or crystalline sediment .....	58
Number showing casts without albumin.....	19

## Blood

Of the 24 widal reactions (20 cases), 6 were negative, 5 partial and 13 positive. The malarial organism was found but twice during the year.

## Sputum

Of the 83 cases (90 specimens) examined for the *Tubercle bacillus*, 9 were positive. Each of the five cases examined for the *Diplococcus pneumoniae* were positive.

## Feces

Of the 1,107 cases (1,220 specimens) in which the feces was examined, 478, or 43.18 per cent. were found to be infected with one or more parasites. Of the 474 persons infected, 285, or 25.57 per cent., had single infection; 122, or 11.02 per cent., had double infections; 58, or 5.54 per cent., had triple infections, and 15, or 1.35 per cent., had quadruple infections, as follows:

TABLE No. 4.

<i>Trichuris trichiuria</i> .....	98
<i>Ascaris lumbricoides</i> .....	40
<i>Necator americanus</i> .....	124
<i>Strongyloides stercoralis</i> .....	18
<i>Hymenolepis nana</i> .....	2
<i>Taenia saginata</i> .....	1—283—25.57%
<i>Trichuris trichiuria</i> and <i>A. lumbricoides</i> .....	65
<i>T. trichiuria</i> and <i>S. stercoralis</i> .....	23
<i>T. trichiuria</i> and <i>N. americanus</i> .....	15
<i>A. lumbricoides</i> and <i>S. stercoralis</i> .....	8
<i>A. lumbricoides</i> and <i>N. americanus</i> .....	7
<i>A. lumbricoides</i> and <i>H. nana</i> .....	2
<i>A. lumbricoides</i> and <i>H. nana</i> .....	2
<i>T. Trichiuria</i> , <i>A. lumbricoides</i> and <i>S. stercoralis</i> .....	41
<i>T. trichiuria</i> , <i>A. lumbricoides</i> and <i>N. americanus</i> .....	11
<i>T. trichiuria</i> , <i>S. stercoralis</i> and <i>N. americanus</i> .....	5
<i>A. lumbricoides</i> , <i>S. stercoralis</i> and <i>N. americanus</i> .....	1—58—5.24%
<i>T. Trichiuria</i> , <i>A. lumbricoides</i> , <i>S. stercoralis</i> and <i>N. americanus</i> .....	14
<i>A. lumbricoides</i> , <i>S. stercoralis</i> , <i>N. americanus</i> and <i>H. nana</i> .....	1—15—1.35%
Total .....	478—43.18%

From the foregoing table the following one is obtained, showing the percentage of persons examined infected with each of the six parasites found.

<b>T. trichiuria</b> (whipworm) .....	270 times	24.39%
<b>A. lumbricoides</b> (eelworm) .....	187 times	16.89%
<b>N. americanus</b> (hookworm) .....	178 times	16.08%
<b>S. stercoralis</b> (Cochin China worm).....	107 times	9.66%
<b>H. nana</b> (dwarf tapeworm).....	5 times	0.46%
<b>Taenia saginata</b> .....	1 time	0.09%
Total .....	748 times	67.57%

TABLE No. 5

This table shows us that 68.01 per cent. infections were found for each 100 persons examined, while table numbers shows us that 43.33 per cent. of the persons examined were infected.

#### A STATISTICAL STUDY OF THE INTESTINAL PARASITES OCCURRING IN 500 UNSE- LECTED COLORED FEMALE PATIENTS.

The parasites present were the whipworm, *Trichuris trichiuria*; the eelworm, or common round worm, *Ascaris lumbricoides*; the Cochin-China worm, *Strongyloides stercoralis*; the hookworm, *Necator americanus*, and the dwarf tapeworm, *Hymenolepis nana*. The seatworm, *Oxyuris vermicularis*, and the beef and pork tapeworms, *Taenia saginata* and *T. solium*, respectively, were conspicuous by their absence.

#### Frequency of Infection

Of the 500 patients examined, 285, or 57 per cent., were found to be infected with one or more parasites. Of the 285 patients infected, 142, or 28.4 per cent., had single infections; 89, 17.8 per cent., had double infections; 43, 8.6 per cent., had triple infections, and 11, 2.2 per cent., had quadruple infections, as shown in the following table:

TABLE No. 6

Trichuris trichiuria .....	72
Ascaris lumbricoides .....	29
Strongyloides stercoralis .....	16
Necator americanus .....	25—142—28.4%
T. Trichiuria and A. lumbricoides .....	50
T. trichiuria and S. stercoralis.....	18
T. trichiuria and N. americanus.....	7
A. lumbricoides and S. stercoralis.....	9
A. lumbricoides and N. americanus.....	3
S. stercoralis and N. americanus.....	2— 89—17.8%
T. trichiuria, A. lumbricoides and S. stercoralis .....	31
T. trichiuria, A. lumbricoides and N. americanus .....	8
T. trichiuria, S. stercoralis and N. americanus .....	3
T. trichiuria, S. stercoralis and H. nana...	1— 43— 8.6%
T. trichiuria, A. lumbricoides, S. stercoralis and N. americanus .....	11— 2.2%
Total .....	285—57.0%

From the foregoing table it will be seen that the five parasites occurred as follows:

TABLE No. 7

Trichuris trichiuria, whipworm.....	201 times 40.2%
Ascaris lumbricoides, eelworm.....	141 times 28.2%
Strongyloides stercoralis, Cochin-China worm .....	91 times 18.2%
Necator americanus, hookworm.....	59 times 11.8%
Hymenolepis nana, dwarf tapeworm.....	1 time 0.2%

Total ..... 493 infections  
or 98.6 infections per 100 persons examined.

The striking features about these percentages are the relatively high percentage of cases showing the presence of the Cochin-China worm, **Strongyloides stercoralis**, and the eelworm, **Ascaris lumbricoides**, the relatively low percentage of cases showing infection with the hookworm, **Necator americanus**, and the absence of infection with the seatworm, **Oxyuris vermicularis**. It is to be remembered, however, that the fairest test for the seatworm is not microscopic, but gross for the adult worms.

The Cochin-China worm was first reported for the United States by Dr. W. S. Thayer, of Johns Hopkins University in 1901. Since Dr. Thayer's three cases, possibly twenty to twenty-five cases have been reported for this country. Stiles and Garrison found 8, 0.23 per cent., of 3,457 cases infected with this parasite. Ashford, King and Gutierrez, working Porto Rico, found 36, 0.8 per cent., of 4,482 cases harboring the same parasite. Because of the fact that the infection per cent. with this parasite is so high and for the additional reason that the rhabditiform embryos of the Cochin-China worm and those of the hookworm closely resemble each other, it is deemed advisable to here state the basis upon which a diagnosis was rendered. The embryos were found to be very active in fresh stools; in a given number of patients they were found to be more numerous in diarrhoeal stools than in well formed or constipated stools, and diagnosis was not rendered until the typical buccal cavity and sexual body which differentiates this rhabditiform embryo from that of the hookworm, as pointed out by Prof. Henry B. Ward and others, were definitely determined.

#### Severity of Infection

The ova of the whipworm, *Trichuris trichiuria*, varied from 1-10 to 31 in each cover slip; of the eelworm, *Ascaris lumbricoides*, from 1-10 to 141; of the hookworm, *Necator americanus*, from 1-10 to 9; the embryos of the Cochin-China worm, *Strongyloides stercoralis*, from 1-10 per cover slip to 189 in a single field. The case of the dwarf tapeworm exhibited 4 ova per cover slip. The infections with the whipworm and with the hookworm were relatively mild, while those with the eelworm as well as some of those with the Cochin-China worm, were relatively severe. Well-marked cases of uncinariasis were rare. A majority of the infections with the eelworm were heavy. Treatment of cases of eelworm with santonin resulted in the expulsion of 87 worms in one case and 159 in another case, 151 of the 159 being obtained as the result of one treatment.

#### Age

To determine the percentage of parasites occurring at various ages, four age groups have been made, as follows:

(1) Under 15 years of age, (2) from 15 to 30 years of age, (3) from 31 to 50 years of age, and (4) over 50 years of age. The results obtained are shown in the following table:

TABLE No. 8

Age.	Number		Per Cent.
	Examined.	Infected.	Infected.
Under 15 years.....	3	3	100.00
15 to 30 years.....	138	74	53.62
31 to 50 years.....	238	138	57.98
Over 50 years.....	121	70	57.85
Totals .....	500	285	57.00

Excluding the first group, which is too small to admit of any deductions being made, it is seen that the variations in the remaining three groups is not especially well marked.

By considering the separate parasites found in the various age groups, the following results are obtained:

TABLE No. 9

## Trichuris Trichiuria

	Number		Per Cent.
	Examined.	Infected.	Infected.
Under 15 years.....	3	2	66.67
15 to 30 years.....	138	46	33.33
31 to 50 years.....	238	106	44.54
Over 50 years.....	121	47	38.84

TABLE No. 10

## Ascarus Lumbricoides

	Number		Per Cent.
	Examined.	Infected.	Infected.
Under 15 years.....	3	2	66.67
15 to 30 years.....	138	45	32.61
31 to 50 years.....	238	66	27.73
Over 50 years.....	121	28	23.14

TABLE No. 11

## Strongyloides Stercoralis

	Number		Per Cent.
	Examined.	Infected.	Infected.
Under 15 years.....	3	2	33.33
15 to 30 years.....	138	27	19.57
31 to 50 years.....	238	45	18.91
Over 50 years.....	121	18	14.88

TABLE No. 12  
Necator Americanus

	Number Examined.	Infected.	Per Cent. Infected.
Under 15 years.....	3	0	0.00
15 to 30 years.....	138	21	15.22
31 to 50 years.....	238	26	10.92
Over 50 years.....	121	12	9.92

The case of *Hymenolepis nana* occurred in a child of 13 years of age.

Again excluding the first age group, it will be seen from the foregoing tables that *Ascarus lumbricoides*, *Strongyloide stercoralis* and *Necator americanus* consistently grow less frequent with the increase of age of the patient. *Trichuris trichiuria* occurred most frequently among persons between 31 and 50 years of age. Most statistical studies show this last parasite as occurring most frequently among children and the aged, I believe. It is generally considered that the dwarf tapeworm occurs more frequently among children than adults, so it is not surprising to find our one case in a patient of 13 years of age.

From the viewpoint of the number of infections per 100 persons examined, the age groups show that, excluding the first group, there is but slight variation between the second and third groups (100.72 per cent. and 102.10 per cent., respectively), while for patients over 50 years of age the infection per cent. is 86.78.

TABLE No. 13

Age.	Number Examined.	Number of Infections	Infections per 100 Persons.
Under 15 years.....	3	6	200.00
15 to 30 years.....	138	139	100.72
31 to 50 years.....	238	243	102.10
Over 50 years.....	121	105	86.78

#### DURATION OF INSTITUTIONAL LIFE

For the purpose of determining the influence of institutional life upon intestinal parasites, the patients have been separated into seven time groups, as follows: (1) Those who have been in the institution thirty days or less. These

are so-called admission patients, many of whom were examined within two or three days after being received. (2) Those who have been at the institution from thirty-one days to one year; (3) two to three years; (4) four to six years; (5) seven to ten years; (6) eleven to fifteen years; (7) over fifteen years.

TABLE No. 14

## Duration of Institutional Life

	Number Examined.	Infected.	Per Cent. Infected.
30 days or less.....	54	11	20.37
31 days to 1 year.....	145	67	46.20
2 to 3 years.....	95	59	62.10
4 to 6 years.....	78	56	71.79
7 to 10 years.....	47	32	68.08
11 to 15 years.....	34	26	76.47
Over 15 years.....	47	34	72.34

The number of admission patients is small, but is approximately 1-10 of the whole number of patients examined. It is at least a sufficiently large group to clearly show that parasitism is much less frequent among this class of patients than among those patients who have been at the institution for some time.

The above table shows that, starting with 20.37 per cent. of admission patients infected with one or more parasites, there is a steady increase in the percentage of persons infected until at the end of the sixth year of institutional life 71.79 per cent. are found to be infected, while 76.47 per cent. of those patients who have been in the institution from eleven to fifteen years harbored one or more parasites. It will be shown in a subsequent table that the greatest number of infections per 100 persons examined, based upon the duration of institutional life, was obtained in the class of patients who have been at the institution from four to six years.

Some interesting facts are developed by considering the percentage of infection with each of the five parasites found in connection with the duration of institutional life.

TABLE No. 15

The infection with the dwarf tapeworm occurred in a child who had been in the institution between two and three years.

The foregoing tables show that the percentage of persons infected with *Trichuris trichiuria*, *Ascaris lumbricoides* and *Strongyloides stercoralis* increases, in general with the length of institutional life, while the percentage infected with *Necator americanus* decreases with the length of institutional life. The increase with regard to the first three named parasites, it will be seen, is a steady one up to the end of the sixth year of institutional life, but some unimportant, perhaps accidental, variations occur thereafter. The slight rise to 4.26 per cent. of persons infected with *Necator americanus* in those who have been in the institution "over fifteen years," over 2.94 per cent. in those who have been in the institution from "eleven to fifteen years," is considered purely accidental, since the number of infections is so small, two infections in the one case and one infection in the other.

The steady decrease in the per cent. of persons infected with *Necator americanus* is explained by the fact that the proper conditions of soil, temperature and moisture do not exist at the colored female building for the propagation of this parasite. It is well known that the hookworm egg must hatch outside of the human body, and the embryo undergo certain changes before the infecting stage is reached. The yards at the colored female building are of clay and are literally baked during the greater part of the year—a condition which is diametrically opposed to the propagation of the hookworm.

The colored female building is over-crowded, and, as would be expected, among the negro insane particularly, many of these patients are uncleanly in their habits—conditions which would strongly favor the propagation of parasites having simple life cycles, such as the whipworm and the eelworm.

The conditions necessary for the propagation of the Cochin-China worm have not been clearly determined so far as I am informed. Evidently proper conditions exist at the colored female building. With this strongyle, as with

the hookworm, probably a majority of infections take place through the skin. The infecting stage is reached more quickly than is that of the hookworm after the embryo in the one case and the egg in the other leaves the human body. Dr. Charles Wardell Stiles has suggested to me that it might be well to examine collections beneath the finger nails of these patients.

The following table shows that the number of infections per 100 persons examined steadily increases with the length of institutional life until the end of the sixth year is reached and that hereafter the number steadily decreases.

**A Statistical Study of the Intestinal Parasites Found in  
500 Miscellaneous Admission Cases, with Special  
Reference to the Occurrence of the Hook-  
worm (*Necator Americanus*).**

All the specimens composing this series were taken within thirty days after admission, and none of the patients had been in the institution previously.

It has been repeatedly stated that uncinariasis occurs more frequently among negroes than among whites. The results obtained in this study indicate that the converse statement is true, white males being infected more frequently than colored males; white females, more frequently than colored females. The study also shows that the frequency of infection is largely dependent upon the age of the persons examined.

Persons are found in the series from almost every County in the State, and, although no definite statistics are presented, sufficient work has been done on the geographic distribution of the infections found to clearly show that uncinariasis occurs more frequently in South Georgia and North Georgia than in Middle Georgia.

### Parasites Present

The parasites present were the hookworm, *Necator americanus*, the eelworm, *Ascarus lumbricoides*, the Cochin-China worm, *Strongyloides stercoralis*, the whipworm, *Trichuris trichiuria*, and the dwarf tapeworm, *Hymenolepis nana*.

### Frequency of Infection

Of the 500 patients examined, 119 (23.8 per cent.) were infected with one or more parasites. Of the 119 persons infected, 108 (21.6 per cent.) had single infections; 9 (1.8 per cent.) had double infections; 1 (0.2 per cent.) had a triple infection, and 1 (0.2 per cent.) had a quadruple infection, as follows:

TABLE No. 20

<i>Necator americanus</i> .....	101	
<i>Ascarus lumbricoides</i> .....	3	
<i>Strongyloides stercoralis</i> .....	2	
<i>Trichuris trichiuria</i> .....	1	
<i>Hymenolepis nana</i> .....	1—108—21.6%	
<i>N. americanus</i> and <i>A. lumbricoides</i> .....	6	
<i>N. americanus</i> and <i>A. trichiuria</i> .....	1	
<i>N. americanus</i> and <i>S. stercoralis</i> .....	1	
<i>A. lumbricoides</i> and <i>H. nana</i> .....	1— 9— 1.8%	
<i>N. americanus</i> , <i>A. lumbricoides</i> and <i>T. trichiuria</i> .....	1— 1— 0.2%	
<i>N. americanus</i> , <i>A. lumbricoides</i> , <i>S. stercoralis</i> and <i>H. nana</i> .....	1— 1— 0.2%	
Total .....	119—23.8%	

From the foregoing table it will be seen that the various parasites present occurred the following number of times:

TABLE No. 21

<i>Necator americanus</i> .....	111—22.2%
<i>Ascarus lumbricoides</i> .....	12—2.08%
<i>Strongyloides stercoralis</i> .....	4— 0.8%
<i>Trichuris trichiuria</i> .....	3— .08%
<i>Hymenolepis nana</i> .....	3— 0.6%
Total .....	133—27.0%

In other words, while 23.8 per cent. of the persons examined were infected with one or more parasites, the infections per 100 persons examined was 27.0 per cent.

From the viewpoints of race, sex and age, infection with the hookworm occurred as follows:

#### Race

The 500 cases were composed of 326 whites and 174 negroes. Of the 326 whites, 85 (26.09 per cent.) were found to be harboring the hookworm; of the 174 negroes 34 (19.54 per cent.) were infected. That is, one-third as many again whites were infected as negroes.

#### Sex

Two hundred and eighty of the cases were males. These cases had an infection per cent. of 27.5. Of the 220 females, 19.09 per cent. were infected, so that nearly one-half as many again males were infected as females. Two hundred white males showed 56 (28.0 per cent.) infected; 80 colored males, 16 (20.0 per cent.) infected; 126 white females, 23 (18.25 per cent.) infected; 94 colored females, 16 (17.02 per cent.) infected.

#### Age

The patients have been divided into the same age groups as heretofore. First, will be considered the occurrence of the hookworm at the various ages in the several services, white male, white female, colored male and colored female; then the results obtained in the different services will be brought together in one table.

TABLE No. 22

Under 15 years.....	7	5	71.43
15 to 30 years.....	196	74	37.76
31 to 50 years.....	177	18	10.17
Over 50 years.....	120	14	11.67
Total .....	500	111	22.22

The foregoing tables show us, in general, that the liability to be infected with hookworms decreases as the age of the individual increases. This fact is readily explained when one remembers that the vast majority of infections with this parasite occur through the skin, thus causing the "ground itch," so common to tropical and subtropical countries. Many of the infections found in patients between 15 and 30 years of age may have occurred in the barefoot days of childhood. The hookworm, like all other animals, has a maximum length of life, but this maximum is not definitely determined. Infections have been found several years after the probable date of infection.

The first group, under 15 years of age, is a small one, but the fact that five out of the seven cases composing it were found to be infected is very significant. Attention is called to the high percentage of persons from 15 to 30 years of age found to be infected, approximately one out of every two white males, one of every three white females, one of every three colored males, one of every five colored females.

The high percentage of colored females over 50 years of age found to be infected is doubtless accidental. A large series of cases would probably correct this finding.

Too much stress cannot be placed upon the results obtained. They clearly indicate that it is our duty to continue the routine examination of the feces of admission patients, and results shown elsewhere in the report indicate that a systematic campaign should be waged against intestinal parasitism among our patients. It is unnecessary for me here to review the symptoms of uncinariasis, nor is it necessary for me to emphasize the importance of systematic

and careful treatment of the cases found. Every physician knows that the intestine should be freed from these blood-sucking, poisonous animals. Upon treatment the physical condition of those infected begins to improve, and it is not unusual for their mental condition to improve also.

#### Colored Males

The feces of 194 unselected colored males who have been in the institution over thirty days were examined. Of this number, 99 (51.03 per cent.) were infected with one or more parasites; 48 (24.74 per cent.) had single infections; 29 (14.95 per cent.) double infections; 17 (8.76 per cent.) triple infections; 5 (2.58 per cent.) quadruple infections. In other words, 177 infections were found—91.24 per cent. per 100 persons examined. These were divided as follows:

*Trichuris trichiuria*, 55, 28.35 per cent.; *Necator americanus*, 47, 24.23 per cent.; *Ascaris lumbricoides*, 46, 23.71 per cent.; *Strongyloides stercoralis*, 28, 14.43 per cent.; *Hymenolepis nana*, 1, 0.52 per cent.

Comparison with the findings among the colored female patients will show the percentage of infection to be higher among the latter class of patients.

#### White Females

Of 108 specimens from unselected white female patients other than admission cases, 51 (47.22 per cent.) were infected with one or more parasites; 33 (30.56 per cent.) had single infections; 13 (12.04 per cent.) double infections; 4 (3.70 per cent.) triple infections, and 1 (0.92 per cent.) a quadruple infection. The infections per 100 persons examined were 69.44 per cent. and were divided as follows:

*Trichuris trichiuria*, 36, 33.34 per cent.; *Necator americanus*, 24, 22.22 per cent.; *Ascaris lumbricoides*, 7, 6.48 per cent.; *Strongyloides stercoralis*, 7, 6.48 per cent.; *Hymenolepis nana*, 1, 0.92 per cent.

#### Water Examination

During the summer a bacteriological and chemical examination of our water supply resulted in showing that the filtration plant is very efficient, 98.57 per cent. of the bacteria in the raw river water being removed by filtration,

and that the percentage of various impurities present is well within the limits of impurities found in a good drinking water, as agreed upon by chemists. Repeated endeavors to isolate the colon bacillus resulted negatively.

In conclusion, I desire to express to you and to each member of the staff of assistant physicians my sincere appreciation of the uniform kindness shown me, and many thanks for assistance in my work, since I have been connected with the laboratory.

Very respectfully,

D. G. WILLETS,

Pathologist.

## Report of Steward

---

Milledgeville, Ga., January 1st, 1910.

Dr. L. M. Jones,  
Superintendent.

Dear Sir:

I have the honor to transmit through you to our honorable Board of Trustees this, my report as Stewart, embracing the period from January 1st, 1909, to January 1st, 1910:

Abstract "A" shows the balance brought forward from last fiscal year, the amount drawn from the State Treasurer for support and maintenance of the Sanitarium, together with a classified statement of the disbursements; also an overdraft of \$54.24, to be carried forward to next year.

Abstract "B" shows the expenditures on account of subsistence.

Abstract "C" shows the expenditures on account of clothing.

Abstract "D" shows the expenditures on account of fuel and transportation.

Abstract "E" shows total amount of officers' pay roll.

Abstract "F" shows total amount of employees' pay rolls.

Abstract "G" shows the expenditures on account of incidentals.

Abstract "H" shows the expenditures on account of medical supplies.

Abstract "I" shows the expenditures on account of contingencies.

Abstract "J" shows the expenditures on account of stationery and postage.

Abstract "K" shows the expenditures on account of special appropriation for waterworks.

Abstract "L" shows the requisitions drawn on State Treasurer for support and maintenance.

Abstract "M" shows the average number of patients from 1883 to 1910 and the per capita cost per diem and per annum.

Abstract "N" shows the cost of maintaining one patient for a year, month, week and day.

Our Storekeeper, Mr. W. H. Hunter, reports stock on hand, \$11,022.20.

Our Apothecary, Mr. D. S. Carrington, reports stock on hand, \$2,967.25.

Our per capita per diem is 37.28.

By references to report of Mr. G. W. Hollinshead, Assistant Steward, you will see results from garden, dairy, hogs, etc.; also report of stock, wagons, implements, etc., on hand.

In compliance with the law, duplicate vouchers of the expenses, accompanied by the required certificate, approved by yourself and audited by the Board of Trustees, have been filed in the Executive Department in Atlanta. I have devoted my entire time, as required by the rules, to the Steward's work, and have to the best of my ability discharged the duties incumbent upon me.

Respectfully submitted,

LUCIUS J. LAMAR,

Steward, G. S. S.

### Abstract A

Shows all money received from State Treasurer, with a classified statement of the disbursements, from January 1st, 1909, to January 1st, 1910:

# Assistant Steward's Report

Near Milledgeville, Ga., January 1, 1910.

Dr. L. M. Jones, Superintendent, etc.:

Dear Sir—I herewith hand you my report as Assistant Steward for the year 1909 of the dairy, garden, farm, pork and transportation; also statement of stock, wagons, etc., on hand January 1st, 1910. We have lost since the last report one old mule, ten milch cows and eleven heifers. We have received from the chicken yards during the year 2,777 dozen eggs; at market price would amount to \$555.40, and 504 pounds of turkeys, \$75.60.

Very respectfully,  
GEO. W. HOLLINSHEAD,  
Assistant Steward.

## Apothecary Department

---

Milledgeville, Ga., Jan. 1, 1910.

Dr. L. M. Jones,  
Superintendent.

Dear Sir:

The following is the report of the Apothecary Department from January 1st, 1909, to January 1st, 1910:

It being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution, we have done so at all times, when it was economy to do so, restricting purchases to chemicals and such preparations and specialties as were required by the physicians.

Respectfully submitted,

D. S. CARRINGTON,

Apothecary G. S. S.

### Statement

The following is the statement of all expenditures of the Apothecary Department from January 1st, 1909, to January 1st, 1910:

Amount of drugs purchased, including all druggist sundries, dental and laboratory supplies, etc., all preparations for fumigation, disinfecting and sanitary purposes; also all alcohol, wines and whiskies.....	\$4,057 18
Amount of drugs sold officers and employees.....	377 18
Amount of drugs on hand.....	2,967 25
Amount of fixtures, etc.....	385 50
Number of prescriptions filled, 32,110.	

Respectfully submitted,

D. S. CARRINGTON,

Apothecary G. S. S.

# Dental Department

Dr. L. M. Jones,  
Superintendent.

Dear Doctor:

The following is a report itemizing the Dental Department and operations of this department during the year of 1909:

Alveolar abscesses treated.....	29
Periodontitis treated .....	23
Stomatitis treated .....	2
Pyorrhoea alveolaris treated .....	5
Acute odontalia treated .....	3
Calcarious deposits removed. Number of patients....	32
Pulps devitalized, removed and cavities and pulp canals filled .....	92
Putrescent pulps removed, tooth treated, cavities and pulp canals filled .....	63
Cavities filled with oxphosphate zinc.....	188
Cavities filled with amalgam.....	433
Cavities filled with guttapercha.....	4
Cavities filled with gold.....	23
Crowns made .....	14
Bridges made .....	3
Artificial dentures made .....	11
Artificial dentures repaired .....	4
Hypersensitive teeth from erosion or attrition cauter- ized with nitrate of silver, number of patients....	3
Teeth cleaned, number of patients.....	8
Teeth and roots badly decayed, ulcerative and offen- sive, extracted .....	1,143
Number of patients during the year.....	1,164

Respectfully submitted,

J. C. RICHARD,  
Dentist.

## Report of Chaplain

---

To the Trustees of Georgia State Sanitarium:

From November 1st, 1908, to November 1st, 1909, I served as Chaplain to the State Sanitarium. Conducted the chapel services each Sunday afternoon. The inmates attended well and seemed attentive and appreciative. I also attended all funerals when so ordered by the Superintendent. The Chaplain's services are valuable to this worthy and well-regulated State institution.

Respectfully submitted,

FORD McREE.

# Report of Matron

Milledgeville, Ga., Jan. 1, 1910.

Dr. L. M. Jones,  
Superintendent, Etc.

Dear Sir:

With thanks to the officers and to my co-workers who have in any way aided me, permit me to submit the enclosed as my report from January 1st, 1909, to January 1st, 1910.

I would add that all repairing has been done for the institution, and all scraps and remnants put to a good use and have been properly accounted for through the Store-keeper's office.

Respectfully submitted,  
MRS. J. M. DARNELL,  
Matron.

## Report of Engineer

---

Milledgeville, Ga., January 1, 1910.

Dr. L. H. Jones, Superintendent:

Dear Sir—I have the honor to submit herewith my report of the workings of this department from January 1st, 1909, to January 1st, 1910.

Respectfully submitted,

T. H. DeSAUSSURE,

Engineer.

---

### Improvements

The dairy buildings which were begun during the latter part of 1908 have been completed. There are two cow barns—connected by a covered way between them—a calf barn, a manure shed, three silos and a cottage for the dairyman in this group of buildings. The cottage is the only part of the old dairy that has been retained. The barns have accommodations for one hundred and fifty-one cows; they also contain four box stalls, each ten by fourteen feet. The barn is “L” shaped, with an open driveway dividing the longest leg into two parts. In it are two feed rooms twelve by twenty-four feet each, one milk room and one boiler room. The inside of the building is ceiled up to a height of five feet with dressed ceiling, and all of the inside woodwork up to that height is dressed and painted white, to the end that the building may be kept clean and sanitary. The north, east and west sides have windows with hinged sash. The south sides are latticed for three feet from the eaves down for light and ventilation. A ventilator on the roof extends the full length of the comb, and the entire floor surface of the building is of cement paving. The cows each have a separate stall, divided one from the other by a bent two-inch iron pipe secured to floor and to stanchion posts, and each stall has a swinging iron stanchion for the proper control of the animals. The stalls are upon a slightly raised portion of the floor which slopes gently to

the rear where there is a cement trough to catch the droppings. In front of the line of stanchions there is a cement feed and water trough which is graded to a common outlet. All floor surfaces and all troughs fall away to openings in the floor, and these openings are connected to a system of underground sewers. Water pipes run throughout the building with proper faucets and hose bibbs for cleaning up and for watering the cows. There are three lines of overhead iron tracks, provided with switches, feed and litter carriers, which run the entire length of the building, and outside of the building to a manure shed. The manure shed is a building twenty-five by fifty feet with a shingle roof which overhangs four feet, and it has the track for conveying manure up under the roof the full length of the building. The three silos are each nineteen feet in diameter and thirty-three feet six inches high; they are made of two by four tongue and groove staves, well banded with wrought iron hoops, and sit on a foundation of concrete which extends one foot above ground. The floors of the silos are paved with concrete, and the roofs are conical with shingle covering. Each silo is connected to the barn by a covered way into which the silage is dumped through a covered chute when being prepared for feeding. Each silo holds two hundred tons of silage.

The grounds and all of the buildings of the institution except the Twin Buildings in which we have been using electricity since its completion, have been wired for electric lights. In all twenty-nine buildings have been wired. By far the larger part of it has been wired in conduit, which makes it as safe as it is possible to have it. Fourteen hundred and ninety-eight inside lights and fifty-two yard lamps were installed in this work.

The diet kitchen on the infirmary in the Powell building has been outfitted with electric cooking apparatus.

Two twenty-eight inch electrically driven hydro-extractors have been purchased and set to work in the laundry at the Negro Building.

Forty-two hundred and thirty square feet of flooring has been laid on the various wards during the year.

One room has been added to the cottage occupied by the apothecary and one room and a back porch to the cottage occupied by the dairyman.

The interior woodwork of five cottages and the exterior of three have been painted and the inside walls and ceilings tinted.

One of the cottages has been raised two feet higher from the ground, and its kitchen—an outbuilding—moved from one side of the house to the other.

Four cottages have been reshingled.

A five-stall stable for housing the oxen used in the scavenger work about the institution has been built at the horse lot.

A third story has been added to the porch at the back of the Executive Building and a doorway cut through the wall, so that access may be had to it from the building.

Thirty-five new water closets and a shower bath have been put in during the year.

A small room has been added to the dwelling at the colony, and a bath tub placed therein with hot and cold water.

A small electric generator has been set up at the water works to furnish lights for night work, and the building has been wired for twelve lights.

The windows and doors of the infirmaries of both the Green Building and the Powell Building have been fitted with fly screens.

Fly screens have also been put to the windows and doors of both dining rooms of the Twin Building.

The following painting has been done:

The entire woodwork of Wards 21, 22 and 23.

The back porch of Powell Building.

The woodwork and machinery of engine room.

The woodwork in seven water closets at Negro Building.

Two examining rooms at Negro Building.

The paint has been burnt from all of the woodwork on the infirmary of the Green Building, and the entire work repainted and enameled. The floor has been varnished also.

The woodwork and walls in two offices and two bedrooms in the Executive Building have been painted.

The walls of twenty-seven cement rooms have been scraped clean and painted.

Besides the ordinary repair work of the institution the following articles have been made and repaired in the several shops:

### Carpenter Shop.

420 Coffins.	28 Wash Tubs.
191 Boxes for shipping coffins.	4000 Lineal feet of moulding.
4 Bread Paddles.	4 Ox Bows.
2 Transom Sash.	2 Double Ox Yokes.
1 Door.	6 Chicken Coops.
5 Coupling Poles.	2 Wagon Carrylogs and frames.
1 Gear for one-horse wagon.	10 Commodes.
16 Table Legs.	8 Latticed Platforms.
8 Sink Tables.	28 Wall Boards for flush tanks.
1 Large double Sink for dairy.	4 Wagon Crates.
4 Lattice Gates.	1 Singletree.
3 Plow Beams.	260 Mop Handles.
7 Binder Reel Blades.	330 Curtain Rods.
2 Pittmans for binder.	1600 Square feet of wooden ceiling.
4 Wagon Bolsters.	2 Flights of Steps.
5 Wagon Tongues.	1 Set of Pigeon Holes for records.
1 Pair Wagon Hounds.	1 Ice Box.
31 Wire Window Guards.	5 Step Ladders.
1 Ladder.	1 Bread Box.
2 Cart Shelves.	1 Sledge Handle.
5 Lattice Doors.	1 Trap Door.
5 Blocks for Hay Press.	152 Electric Light Cross Arms.
1 Set of Rims on wheels of two hose wagons.	1 Water Trough.
250 Space Blocks.	12 Spokes in hand cart wheel.
1 Double Shelf Table.	1 Crane.
6 Dining Tables.	1 Dumb Clock for cannig factory.
12 Trays.	6 Tables.
2 Wooden Seats for water closets.	564 Headboards for cemetery.
200 Bedsteads.	1 Cart Body.
1 Large Tool Box.	
4 Hominy Paddles.	
4230 Square feet of floor laid.	

## Tin Shop

18 Fifty-pound Lard Cans.	18 Feet of Valley Tin.
2 Half - gallon Torch Lights.	23 Squares of Roofing, put on.
2 Two-gallon Milk Cans.	42 Oil Cans.
3 Eight - gallon Milk Strainers.	30 Feet of Eave Trough.
20 Milk Pans.	5 Galvanized Iron Tubs, 14 x24.
8 Milk Shakers.	5 1½-gallon Coffee Pots.
12 Two and one half Milk Buckets.	2 Feeding Tubes.
72 Dish Pans.	2 Boxes for laboratory.
2 Two-foot Ventilators.	12 Fertilizer Distributors.
1 Water Cooler.	575 Pcs Galv. Iron, each 3¾x2½.
1 Lining for proof box.	1 Hominy Dipper.
1 Lining for double sink at dairy.	53 Pint Dippers.
132 Half-gallon Pitchers.	2 Butter Boxes.
7 Potato Steamers.	6 Chicken Troughs.
1 Nutmeg Grater.	9 Two and a half-gallon Buckets.
2 Mess Boxes.	1 Potato Grater.
3 Biscuit Cutters.	1 Funnel.
2 Ice Boxes, lined.	1 One-pint Measure.
1 Dust Pan.	11 Cake Pans.
2 Drip Pans.	4 Cups for safe legs.
3 Tables, covered.	2 Yard Horns.
2 Dinner Pails.	7 Ash Pans.
5 Reflectors.	1 Syrup Skimmer.
4 Flour Scoops.	1 Syrup Paddle.

## Furniture Repair Shop

1583 Chairs repaired.	1 Backband made.
772 Wooden Seats put in Chairs.	3 Throat Straps made.
97 Shades repaired.	67 Leather Seats put in chairs.
39 Dressers repaired.	266 Shades put up.
38 Dressers varnished.	36 Shades cut down and fitted.
46 Bedsteads repaired.	15 Glasses put in dressers.
4 Trunks repaired.	72 Tables repaired.
1 Night Watch Clock Case repaired.	41 Tables varnished.
172 Cane Seats put in.	4 Organ Stools repaired.
77 New Springs put in bedsteads.	30 Strong Dresses eyeleted.
5 Bedsteads varnished.	77 Chairs varnished.
2 Sewing Machines repaired.	28 Chairs upholstered.
	7 Safes repaired.
	2 Safes varnished.

### Committee's Report

Honorable Board of Trustees, Georgia State Sanitarium,  
Milledgeville, Ga.

Mr. President and Gentlemen:

Your Committee under the resolution passed at the July meeting beg leave to submit this, their report:

Before undertaking our task it was deemed best to request your Superintendent to get from his Staff such suggestions as they thought would be for the good of the Sanitarium, and improve the work on their respective sections. Our request was at once cheerfully complied with, and the reports showed not only the great interest taken in the work by your entire Staff, but was also of great assistance to the Committee in their work. In order to make a better comparison with your institution it was thought best to visit several of the large insane hospitals in the West, and then go North and East. This was done, and during the fourteen days of our stay visited the following Hospitals: Central Indiana Hospital for the Insane, at Indianapolis, Ind.; the Toledo and Massillon State Hospitals of Ohio (these hospitals are on the cottage or pavilion plan, which is the modern ideal); Manhattan State Hospital, on Ward's Island, came next, to be followed by visits to the New Jersey State Hospital, at Trenton, N. J.; the Philadelphia Hospital for the Insane and the Pennsylvania Hospital, in Philadelphia. The latter, while not a charitable institution, like that under your care, was built along the same line, and gave us some valuable ideas on hydrotherapy, gymnasium and out-of-door games and exercise. Our work of investigation ended with "St. Elizabeth's" or the Government Hospital for the Insane, at Washington, D. C. At all of these institutions your Committee was met with the greatest kindness and cordiality, and every opportunity given them to go through their buildings, to see their various methods of management and treatment. Just here it is the pleasure of your Committee to state that from the general standpoint or practical work and results, our information and observation is such as to enable us to say that the Georgia State Sanitarium is conducted on equally

as good lines as any of the institutions we visited. This statement is made with no spirit of criticism or depreciation, for the Hospitals visited are all conducted on a high plane, and are among the best in this country.

### Per Capita Allowance

In many institutions the reforms which were advocated by the late Superintendent, Dr. T. O. Powell, and his Board of Trustees are just being put into practice, and had the Legislature of Georgia appreciated the great importance of these recommendations and granted the request of his Board and himself made thirteen years ago, the Georgia State Sanitarium would have been fully abreast and the equal of any insane hospital in this country. Even as it is now, it has been a source of surprise and congratulation on the part of those at the head of similar institutions that the Sanitarium under your care has been able to do such good work and exist at all on the per capita cost of 34.7 cents a day.

In fact, so little did this amount appear for the maintenance of 2,100 patients, with the Medical Staff, officers, nurses, attendants and employees of all kinds, making in the aggregate some 3,700 people, that criticism became so constant that we were loth to mention the per capita. And of the Hospitals visited not one of them is maintained at so small an expense as the one under your care. In the language of a distinguished alienist, "If the State assumes the care of her unfortunate insane, it is her plain duty to provide every facility deemed essential for the proper treatment of these people by those who alone are competent to judge—those who have studied the work in connection with such institutions." Your Committee, in order to get as much as possible out of their work, formulated a plan of questions which we used for information and to invite discussion, which often brought out valuable points.

### Line of Investigation

The questions are as follows, and we will try to give you their answers and deductions later on in our report:

The Medical Staff, how many and how divided?

Reception, examination and detention buildings or wards?

Manner of preserving records?

Existence of a training school?

Number of nurses, hours on and off duty, class of same and attendants?

Number of patients and per capita cost?

The manner of keeping sane and insane epileptic, criminal insane and feeble-minded?

Care of the tubercular patients?

Infirmary and hospital arrangements?

Operative work?

Cleanliness of patients and institutions?

Food, kitchen and dining-room arrangement, diet, sheets, etc.?

A dentist?

Electro and hydro-therapy, value of each?

Work, recreation and amusements?

Autopsies. How obtained?

Pathological work and its importance?

Library for staff and nurses?

Staff meetings?

### The Staff

Taking up our first question—The Staff:

In Hospitals with less than 2,000 patients we find the arrangement is like that of your institution—a Superintendent, First Assistant, Assistants and Pathologists. In larger Hospitals the Staff is composed of a Superintendent, who is the executive head; two First Assistants, one for each male and female division, with assistant physicians under them.

The Clinical Director comes next, whose duty is to look after the patients, classifying and assigning them to the respective sections. Aside from this, he is to preside at the clinical conferences or Staff meetings, which are held daily in the early morning, and all medical officers are expected to be present. Here cases for admission or discharge are considered, obscure cases and those of difficult diagnosis gone over and discussed, and cases of special interest made the subject of study.

In every Hospital where this was in practice it was thought to be of utmost importance and value, not only for the staff, but to the patients. Your committee believes and would recommend that you give this matter your careful consideration, for we think that its adoption would not only lessen the arduous duties of the Superintendent, but get better, more efficient and scientific work from his assistants. Your Committee has also noticed that the Medical Staff of our Hospital, as in many others, is too small, and out of proportion to the number of patients cared for. We recommend an increase of two physicians on the Staff and of two internes. It is also of interest to state that your Medical Staff, while having an average of 330 to 340 patients to each physician, do not have more under their care than do the medical officers in many of the large Hospitals of the country. The same is also true of the nurses and attendants. It must also be remembered that one physician can care for many more of the chronic and harmless insane than he can of the acute, disturbed or violent patients.

### Examination of Patients

We found with few exceptions that each institution now had what is known as a psychopathic or reception and detention building, where acute cases are put to bed for a sufficient length of time for diagnosis, and then transferred to the section for further treatment. It is claimed by many Superintendents that this method of dealing with patients not only shortens the stay in the Hospital of many, but not infrequently they recover without being sent to the main section or division.

In this building examinations are made and careful histories taken so as to get all possible light upon each individual case; the records are then written up, to be carefully filed away in a suitable fire-proof safe or vault. The great importance of keeping these records is patent not only from a medico-legal standpoint, but for easy reference. The writing up of these papers should be done by stenographers as the physicians dictate, and so save a great deal of work. Your Committee believes that a building for the purpose just named would be of great value, but if

not able to get this, then some part of the present ones should be fitted up for this purpose.

Along with this suggestion comes the adoption of some good form of records, and requiring the Staff to carry them out.

In order to further facilitate the work of taking and keeping the records the employing of at least three typewriters will be needed.

### Nurses' Training Schools

With but one exception, we found a training school for nurses in connection with insane hospitals. It is now looked upon as a necessity, for thorough and systematic training of nurses renders them able to give more intelligent and better care to the patients under their charge. We hereby recommend the establishment of a training school in your Sanitarium, the plans for which we have, they having been drawn up at the request of the Board in 1907, and with a few changes should be adopted. Along with the establishing of a training school for nurses there should be a nurses' home, independent and apart from the other buildings, where their rest and recreation would be undisturbed.

Looking into the per capita cost of maintaining patients we find that it is computed differently in the different hospitals; some not including all expenses in their calculations, as is done in this institution. From a close and careful analysis of the per capita (per diem) of seventy-nine insane hospitals in this country, the cost of the Georgia State Sanitarium is the lowest with but two exceptions—i. e., Louisiana State Hospital, 34 cents, and the Central State Hospital (negro), Petersburg, Va. Your cost of maintenance is entirely too low, as shown by the facts just stated, and it should be increased. That the State Sanitarium has been run for so small an amount, 34.7 cents, also reflects great care and credit upon its management.

### Segregation Necessary

The necessity of keeping the sane and insane epileptics, the criminal insane and the feeble-minded in the same building and wards is condemned and deplored, and should not

be allowed. It is unjust, and not for the best interest of the patients or Sanitarium.

Attention to this was advocated in the report of the Trustees in 1902. Your Committee earnestly hopes that the recommendations so often made by the Board in connection with the class of patients just mentioned be continued, and the necessity urged upon the Legislature, of establishing separate and distinct buildings for their care.

### **Tubercular Insane**

The management of the tubercular insane seems to have been a problem in many insane hospitals. The importance of this subject cannot be over-estimated, and it is the desire of those in charge of every hospital to segregate these people. In this connection we found in some institutions their manner of isolating and caring for these patients was not better than yours; the cause of this, as with your institution, is the need of money. In some instances recreating piazzas have been turned into tubercular wards. In others, they are kept in the large wards of the buildings. At Ward's Island, N. Y., Philadelphia Hospital and at St. Elizabeth's, Washington, D. C., they have cheaply-built pavilions or wooden shacks like the one now in use at your negro building. In some instances they are kept with the old bed-ridden and harmless insane for the want of sufficient room, and, secondly, on the idea that these poor unfortunates can do each other but little harm. While no doubt this plan is the best that can be done, for the want of room and money, still it does not seem just or fair to the poor unfortunates of either class.

Your Committee again begs leave to refer to the pathetic appeal of the late Superintendent Powell for the tubercular patients under his care, as shown in his report of 1902. Along this line let it also be remembered that appeal after appeal for means to properly care for these patients has been made in every report from this Board for the past eight years, and until your requests are granted your Committee suggests and urges that the appeal be continued. We also suggest the advisability of seeing if some parts of the present buildings cannot be set aside and

arranged for these people. It must also be kept in mind that our requirements, like those of other institutions in the South, demand not only the separation of the races in distinct wards and buildings, but also means a greater expense for their care.

A comparison between the Georgia State Sanitarium and the Sanitariums in thirty-three other States, showing the percentage of deaths from all causes of the number of patients treated and the percentage of deaths from tuberculosis in each State for the year 1908. The white population only in the Georgia Sanitarium is compared with the total population in Sanitariums north of Mason and Dixon's line because there are but few negroes in those States, and we have no data for separating them.

A comparison of the percentage of deaths of negroes in the Georgia Sanitarium and the Sanitariums of other Southern States is presented herewith in another paper:

No. of Sanitariums	Name of States	Percentage of Deaths from All Causes	Percentage of Deaths from Tuberculosis
1	Georgia	.069	13.5
8	Massachusetts	.062	20.5
1	Connecticut	.057	15.8
10	New York	.064	15.8
2	New Jersey	.063	14.
4	Pennsylvania	.066	15.8
1	Delaware	.152	23.9
1	Maryland	.07	15.5
1	District of Columbia	.06	15.4
3	Virginia	.083	15.
1	West Virginia	.057	19.
3	North Carolina	.097	13.2
1	Florida	10.4	16.
5	Ohio	.07	12.5
4	Indiana	.066	18.5
5	Illinois	.10	16.1
3	Michigan	.129	12.7
1	Wisconsin	.074	16.
1	Minnesota	.10	20.
2	Iowa	.085	16.

1	Mississippi	.057	20.
1	Louisiana	.069	*19.
3	Texas	.088	23.
5	California	.07	12.8
1	Washington	.066	21.
1	Oregon	12.2	12.7
86	34		

\*Whites.

1. It will be observed that there are only three Sanitariums in the United States that contain a larger number of patients than the Georgia Sanitarium, and it is reasonable to suppose that when there are fewer in number better sanitary conditions can be preserved.

2. That in these thirty-three States there are only eleven wherein the percentage of deaths from all causes is lower than in the Georgia Sanitarium, and only eight States wherein the percentage of deaths from tuberculosis is lower.

3. That of the eighty-six Sanitariums mentioned only two spend less per capita per diem than the Georgia Sanitarium, while a vast majority of the others expend a great deal more.

4. That in seven other Southern States, where the percentage of deaths from tuberculosis among the negroes is known there are only three wherein the percentage is lower than in the Georgia Sanitarium.

5. It is self-evident that if the Georgia Sanitarium were furnished with as much money per capita as a vast majority of the Sanitariums in the country enjoy much better care and treatment could be bestowed on its patients.

### Asylum Hospitals

In the matter of infirmaries and hospitals in connection with insane hospitals, we found that while infirmaries were in the same buildings, the hospitals are separate and distinct, and are used for the acutely sick and injured. In the hospital buildings there are not only rooms for nurses and attendants, but nicely arranged and equipped operating rooms in which the emergency or surgical operations can be safely done. Surgical operations, however, are never performed, except by the written consent of the family or relatives, or for extremely urgent cases.

In the matter of the care, treatment and cleanliness of patients, and the sanitary conditions of the institutions visited we found them no better, if as good, as in the one under your care, and especially is this true where the buildings are old and of the same style as many of the buildings here. We took special pains to look into this, and were glad to find this Sanitarium was not in the background.

### Kitchens and Dining Rooms

Of food, kitchen and dining room arrangements:

We were allowed to make every possible investigation, being shown through the kitchens, bakeries and cold storage plants, as well as through the dining rooms, whether congregate or in the wards, so as to see the patients at table, the kind and quality of food, and the manner in which it was served. In every hospital but two that we visited, your Committee ate the same food as that served the patients, in the dining room of the Superintendent or of his house officers. And we are glad to report these conditions as being practically the same as those in your own institution, possibly the only difference being a greater variety of food, and a desert twice a week.

In the matter of a dentist on the Staff, such as you have here, there were but two institutions in which such was the case, although the value and importance of such an officer was admitted by all, for not infrequently do gastro intestinal disturbances and neuralgias of the head and face arise from defective teeth and diseased gums.

It is recommended that your dentist examine thoroughly the mouth and teeth of each patient, as soon after admission as possible, with the view of putting the teeth in good order. And, as a medico-legal point, a diagram of the mouth and teeth should be made, to be filed away with the records of the case so as to be of service in any injury occurring about the face or mouth later on.

### Electro and Hydro-therapy

In the matter of electro and hydro-therapy: It was noted that the former was looked upon with but little favor as a remedial agent; still it is of some value as an aid to diagnosis and for suggestive treatment. Hydro-therapy is being extensively used, and from what we saw is most highly commended. A hydro-therapeutic plant to be effective must have an abundant supply of hot and cold water, as well as good drainage. It would also be necessary to have some one trained in the handling and management of the plant to get satisfactory results from its use. It was noted that the shower bath in varied forms is fast being

substituted for the old style bath tub, which is now considered unsanitary, and only used for immersion treatment, which treatment, we were told, was of great value in cases of acute violent insanity. While realizing fully that to purchase and install a first-class hydro-therapeutic plant would mean an outlay of considerable money, we believe it to be of such importance that we recommend your taking the matter up with the view of having it done.

In the matter of work, recreation and amusements: In but one instance did we find a Superintendent who was opposed to having his patients work, while on the other hand he most heartily advocated recreation, diversion and amusements as being of the greatest value. The general idea of work, combined with amusements, was most heartily commended by all the Superintendents of the other institutions we visited.

### Autopsies

In the matter of autopsies, it is the universal rule that this shall not be done without the written consent of the family of the patient. Probably one of the most important matters in connection with the modern insane hospital is the pathological laboratory, under the care of a neuropathologist. While the value of such scientific work as this is not fully appreciated, nor is its results thus far such as hoped for in the treatment of the insane, it is still in its infancy, and like all innovations of advancements in science or medicine, is being slowly and carefully developed. Your Committee believes that this important department should be inaugurated and started on its labors at once. No one not connected with medicine can realize the vast improvement which has taken place in other departments of medicine, and why should we not then expect similar good work to come from this source?

Your Committee would also recommend a library and reading room for your Staff and nurses, in which books and journals pertaining to the study of mental diseases, as well as other journals of current literature, that may be had. As soon as it is possible, we recommend the utilizing of such detached buildings as may be available for the disturbed, noisy and vulgar who annoy other patients, and do away

with the possibility of their being benefited. Your institution, while unable, for the want of room and money, to separate these unfortunates, has provided yards protected by walls, in which they get the benefit of exercise, fresh air and sunshine, without being made the victims of idle curiosity. The close-walled yard was noticed at Philadelphia, Trenton and in part at St. Elizabeth's and Washington, D. C. Where they do not have these yards, this class of unfortunates are kept indoors, and so deprived of the great blessings already mentioned.

Mr. President and fellow-members of the Board, does it not seem strange that in this day of advanced civilization and enlightenment, possibly not equalled by any period of the world's history, and wherein the possibilities of the human brain seems to have no limit, and where the intellect of man is using every effort to relieve suffering, prolong life and elevate man to his highest estate, as shown by the work in prison reform, the effort to banish tuberculosis, cancer, yellow fever and kindred ailments at the cost of thousands of dollars, that so little is done by those having the power of appropriations, to care for our fellow beings sick in mind with reason dethroned and intellect gone.

#### An Appeal for the Patients

Gentlemen of the Board, bear with your Committee a few minutes longer, review their report, and it is evident that while great and good work is being done, is it asking too much of the citizens of this great State to urge upon those comprising our legislative bodies to grant such needed appropriation as will place the Georgia State Sanitarium among the foremost of its kind? "Men who control the appropriations, as a rule when matters connected with our institutions are pending, mean to do right, and if they fail to make the proper recommendations it is generally because they do not grasp the importance of the work contemplated."

Again, on the other hand, "the authorities of the State institutions should be insistent and aggressive in their demands for all that is essential to the proper treatment and care of the unfortunate individuals who are placed in their charge."

The State deprives these patients of their homes, their families and their liberties as much for the benefit of the community as for the benefit of the patients, and is, therefore, in duty bound to provide for their needs. These needs are not confined to mere custodial care, nursing, good food and clothing, but include every equipment, device or article which experience has proven to be of benefit in assisting the recovery or ameliorating the condition of the patient.

In dealing with this question it must be remembered that the individuals committed to our care are not here from choice. They are deprived of their liberty by an act of the State's ceration—not only for their own good, but that of the entire community. Is it not right under such circumstances, for the State to provide every facility for the treatment and proper maintenance of these unfortunates?

Then ask them when legislation is demanded for the unfortunates of other families, who are just as near and dear to those interested, that they bear in mind the greatest of all precepts for the government of their daily life, viz: The Golden Rule.

# **Sixty-seventh Annual Report**

## **Of the Board of Trustees of the Georgia State Sanitarium,**

---

Milledgeville, Ga., January 1st, 1911.

To His Excellency, Joseph M. Brown, Governor.

Sir:—The Board of Trustees of the Georgia State Sanitarium, as required by law, respectfully submits herewith its report of the conduct and management of this institution for the year ending December 31st, 1910, being the sixty-seventh year of its existence. The annual reports of the Superintendent and subordinate officers accompany this report as part of it and furnish full details of the movement of the population, cost of maintenance, work done, etc.

### **Increase of Patients.**

The year closes with 3,347 patients in the care of the Sanitarium, an increase over last year of 141. The daily average for the year was 3,276, an increase over last year of 117. The number of admissions for the year was 996, the largest in the history of the institution. The total number receiving treatment during the year was 4,202.

From the census returns for the past forty years it is found that the ratio of the population of the Sanitarium to the population of the State was as follows: In 1880 one in 908, 1890 one in 1,012, in 1900 one in 869 and in 1910 one in 826. No statistics showing the actual increase in insanity for the past decade are at present available to the Board. It should be remembered that the population of the Sanitarium includes the idiots and feeble minded, the sane epileptics, etc.

In the past quarter century the population of the Sanitarium has increased more than 300 per cent.

### Cost to the State.

The appropriations to the support of the Sanitarium in 1910 were \$449,422.00, and for the erection of tubercular wards \$15,000.00. The expenditures for the year were \$450,388.28, in which is included \$8,041.46 thus far spent of the tubercular wards appropriation. The overdraft of \$54.24 from last year has been paid. The year closes with a cash balance in the hands of Treasurer Andrews of \$9,335.34, in which is included \$2,314.40 derived from the board of special nurses, sale of scraps, etc. In addition supplies are on hand as is shown in the officers reports. Unpaid checks or vouchers were outstanding at the close of the year amounting to \$13,469.85 which, though applicable to the past year's work, will not appear until the work of 1911.

The yearly cost of each patient was \$137.48 as against \$136.08 in 1909, the daily cost .37665 as against .3728 in 1909. Prices for supplies have ruled high throughout the year and close economy has been necessary in order to live.

The farm, gardens, dairy and orchard have been made to contribute substantially to the support of the Sanitarium.

The Board is not advised as to the amount of insurance carried on the Sanitarium property, including supplies, and makes no report thereon.

The business records now in use were devised and installed by a competent public accountant in April last. The classification of expense accounts has been slightly enlarged in order to more accurately set out the expenses of the institution. Its exact financial condition can be readily ascertained from them at any time. Careful individual accounts are kept of the funds placed with the Steward for the use of patients and such accounts, as all business records, are regularly examined by the Board.

The great and growing size of the Sanitarium makes it apparent that some relief must presently be afforded it. In this connection the attention of your Excellency is again directed to the increasing number of senile, harmless imbeciles and helpless paralytics found among the commitments. The Sanitarium is powerless to benefit them, they are not a danger

to society and while they are entitled to public care if such be needed this care can just as well be given by the counties committing them. The Sanitarium should likewise be relieved of the support of sane epileptics and the feeble minded by the establishment by the State of institutions designed for their peculiar needs. This important matter is treated elsewhere in this report.

### **Appropriations for Support in 1912 and 1913.**

The Board estimates that at the present rate of increase 3,476 and 3,576 patients must be provided for in 1912 and 1913. Based on a cost of \$3.50 per week for each patient the sums required for these years will be \$634,376.00 and \$652,626.00 respectively. These sums can be slightly reduced by the restriction of commitments elsewhere recommended. In recommending that appropriations be made on the basis stated the Board is in line with the findings of the committees of investigation from both the Executive office and from the General Assembly in which larger appropriations are urged as the chief need of the Sanitarium.

The Board is desirous of lending every assistance in its power to the good work of the medical department and can only do so with the aid of the General Assembly. The needs of this department are set out in another part of this report. At the same time the Board would call attention to the extraordinary repairs and enlargements enumerated in the Superintendent's report which press for early attention.

In addition to the regular maintenance appropriations, other special appropriations for specific needs are recommended elsewhere. Touching on these the Board is advised that in other States, notably Alabama, appropriations for maintenance are based on a cost of \$3.50 to \$4.00 per week for each patient, it being stipulated that the Board of Trustees shall so administer such funds as to provide from it for the erection of new buildings, etc., as needed. Your Board is not unwilling to undertake the maintenance of the Sanitarium on a like basis, provided only that the needed annex to the Negro building be first supplied.

### Annex to the Negro Building.

The investigating committee from the last General Assembly directed attention in its findings to the crowded condition of the Negro building, as did the last report of the Board. Its condition is highly unsanitary and more room is urgently needed. Its day rooms are in use as sleeping quarters. The Superintendent estimates that room for 300 patients will afford needed relief to it and provide room for new comers. An annex to the present building immediately in its rear is the most economical way of supplying this need. It should carry a large hall which can be used for amusements, religious services and social gatherings, etc., by the convalescent patients. It does not reflect credit on the State that this important provision for the happiness of these unfortunates has been so long unprovided.

It is also necessary to enlarge the kitchen attached to this building that it may be adequate to the demand on it.

The boilers supplying heat to the building have been condemned by the insurance people and should at once be replaced.

These needs are all so urgent that the Board has had the Sanitarium Engineer make the necessary plans for such annex, etc., and prepare an estimate of their cost. One floor plan and the plan for the enlarged kitchen, etc., is printed in this report. The estimate of cost is as follows:

Annex to accommodate 300 patients with rooms for nurses and administrative purposes and an amusement hall, built of brick.....	\$ 92,028.00
Enlargement of kitchen, added cooking utensils, enlarged boiler room with new boilers.....	14,000.00
	<hr/>
Total.....	\$106,028.00

It should be noted that this estimate carries no allowance for furniture and \$2,000.00 should be added for this purpose. The Board respectfully recommends an appropriation in this sum for these specific purposes.

### Water Storage Reservoir and Fire Escapes.

The previous recommendations by the Board for an appropriation of \$15,000.00 for the construction on the Sanitarium grounds of an underground storage reservoir for water to hold 250,000 gallons is again respectively renewed. The water works are 3 1-2 miles distant and but a single pipe line connects it with the Sanitarium. A break in such line is always possible and should be guarded against. A stand pipe of suitable size furnishing gravity pressure will of course be better than an underground reservoir, but inasmuch as the Sanitarium is supplied with an excellent stationary fire engine, the latter will answer its needs at less cost. The estimate as to its cost has been carefully made by the Engineer.

The Sanitarium is not supplied with outside fire escapes nor with fire proof buildings. All of the buildings are provided with ample inside stairways for use in case of fire, and may be considered reasonably safe. In order, however, that every precaution shall be taken against a possible fire the Board is constrained to recommend an appropriation for the purpose of equipping the Sanitarium with outside escapes. It is advised that seventeen are needed and that the cost will be approximately \$1,000.00 each for such escapes as are adapted to the use of insane persons.

### Work of the Medical Department.

The report of the Clinical Director shows in detail the work of this department. The year has been a busy one. Practically all of the 996 new patients received during the year passed through the clinic, many more than once, and the combined skill of the members of the medical staff brought to bear on each case. Good progress has been made and the Board notes with pleasure the deep interest shown by the medical officers in their work. Much credit is due Clinical Director Green for the work accomplished.

The tubercular wards, of which four new ones have been built, have shown gratifying results which amply justify the money expenditure for them. The unexpended balance of the

special appropriation for the erection of such wards should be placed at the disposal of the Board for the erection of additional wards as needed. From the Clinical Director's report it is learned that about 50 per cent. of the tubercular cases are brought to the Sanitarium and do not originate in it. It is also of interest to note that the deaths during the year from pellagra exceed in number those from tuberculosis.

Application has been made to the Public Health and Marine Hospital Service for the detail of an expert to study pellagra in the Sanitarium.

Authority has been given the Superintendent to allow the members of the medical staff to respond to calls from within the State for consultation in cases of suspected mental trouble when they can be spared without detriment to the service. It was hoped in this way to increase the usefulness of the Sanitarium to the State.

The Nurses Training School chartered by the last General Assembly began its initial session in October, with a fair number of students enrolled. It is hoped to make this School an adjunct of great value to the Sanitarium. It offers young women an exceptional opportunity to secure such training and while doing so support themselves as employees of the Sanitarium. All of its white female nurses capable of receiving training are encouraged to enroll.

### Needs of the Medical Department.

In the work of this department centres the hopes of hundreds of Georgia homes. It is the duty and should be the pleasure of the State to aid its work in every way possible that its efficiency may be increased. As an asylum for the hopeless and chronic insane the Sanitarium performs its duties admirably. The Board does not minimize the importance of this work when it states that its greatest work is for the recent and acute insane in whom there is hope for recovery. Its every need to this noble end should be willingly supplied. After long consideration preceded by frequent conferences with the medical officers the Board is constrained to make the

recommendations which follow, giving in each case its reasons.

First.—A suitable building for the treatment of the recent and acute insane is urgently needed. The Board is advised that such cases are practically the only ones in which recovery can be hoped for and that it is highly essential they be cared for in a building entirely apart from the general wards in order that they may be free from the depressing presence of the chronic and hopeless insane. The arrangement of the present buildings as well as their crowded condition precludes such a separation now. Again, it is advised that such a building should be equipped with such methods of treatment as modern science has demonstrated to be of value, with diet kitchens, etc. It is further advised that the mentally ill require hospital care even more than do the physically ill and that the lack of such care, or failure to give it promptly, frequently decides against recovery. It would appear that the best interests of the State are served by giving such cases the best treatment modern science can afford for the excellent reason that every uncured patient is a burden to the State as long as he lives while, on the contrary, every cured patient ceases to be a burden and becomes a producer. The first floor plan of such a hospital building for these classes has been prepared by the Engineer under the supervision of the medical officers and accompanies this report. It illustrates what is required for the most effective work. Exclusive of foundation and movable furniture the estimate of cost is \$112,439.00. In all a total of \$130,000.00 will be required. Such a building will accommodate 208 patients and is furnished and equipped in duplicate for white males and females. The Board respectfully recommends that such a building be provided and that an appropriation be had for this purpose.

Second.—The next need of the medical depart-

ment is the necessary equipment and instructors for the occupational treatment of the insane now recognized as a remedial agent of much value. Occupation and amusement divert the diseased mind and direct it into healthy channels of thought. They need to be wisely administered. It is a notable fact that from the patients actively employed come the greatest number of improvements and recoveries. The many different classes represented in the Sanitarium require that many kinds of employment be provided. To this end work rooms, instructors and materials are required. The increase in the per capita allowance will make this need easy to supply. It is not now possible.

Third.—Too much emphasis cannot be laid on the value of good nursing and every effort should be made to secure a sufficient number of nurses for the work of the medical department. There is a growing scarcity now of white female nurses due, in the judgment of the Board to these causes: the long hours of duty and arduous work while engaged, the low wages paid them and the lack of a home for them when not on duty. The wages of these faithful women range from \$12.50 to \$17.00 per month, head nurses being paid \$20.00. Our sister States pay from \$15.00 to \$25.00. The increased per capita allowance asked for will enable the Board to grant an increase in such wages. Other nurses and attendants in the Sanitarium have asked for increases and are waiting patiently for such time as the way may be clear for the Board to grant them. The wages now paid being increased a Nurses Home should be provided for the white female nurses. They should no longer be required to sleep on the same wards with their patients. It deprives them of the rest so essential after an arduous days work. They should be given a building comfortably heated and furnished for their use when off duty. The cost of such a building, exclusive of foundation and mova-

ble furniture, of adequate size and built of brick is estimated by the Engineer to be \$48,853.00. To this should be added \$7,500.00 for the foundation and furniture. The first floor plan of such a building accompanies this report and recommendation is made that such an appropriation be granted for this specific purpose.

### **Epileptics Not Insane and the Feeble Minded.**

The Board has made repeated recommendations regarding the proper care of these classes urging that suitable institutions be established for their proper care and treatment elsewhere in the State. The present law allows their commitment to the Sanitarium. There were doubtless economic reasons for it at that time but these are not of force now. A hospital for sane epileptics and a home and training school for the feeble minded have nothing in common with a hospital for the insane, each class requiring radically different care and treatment. Their enforced association with the insane is an injustice to each class and should not be permitted longer. No class of the afflicted are so to be pitied as the epileptics. They suffer from a malady that bars every door to them and from which there is little hope of recovery. The Board would suggest that a hospital for them might appropriately be called the "T. O. Powell State Hospital for Epileptics" in memory of that great and good man who devoted his life to the service of the State and humanity as Superintendent of the Sanitarium. Many were his appeals in behalf of these unfortunates whose condition aroused his profoundest sympathy.

The home and training school for the feeble minded is an urgent State need and its establishment should not longer be delayed. Donations of land can doubtless be secured for it free of cost and the initial cost to the State reduced in this way. By request of the Board Dr. Thomas R. Wright, a member of the Board, has prepared a paper on the State care of the feeble minded and it is published as an appendix to this report.

Should action in this matter be longer delayed then it is necessary the Board shall ask an appropriation for the purpose of erecting a suitable childrens' building at the Sanitarium for the accommodation of this class when committed to it. The present building is badly crowded and inadequate to its purposes. The first floor plan of such building as suggested by the Board is published herewith. It includes two small school rooms for their use. Kindergarten teachers will be necessary for their instruction and an increased per capita allowance is needed in order to secure them. The Engineer estimates the cost of this building, exclusive of foundation, built of brick to be \$51,642.00 and a conditional appropriation in this sum is asked for this specific purpose.

#### Amendments to the Law.

Believing that certain changes in the law governing the Sanitarium to be essential to the best interests of humanity and the State the Board recommends the following amendments thereto:

1st.—Amended so as to prohibit the commitment to it of senile harmless imbeciles and helpless paralytics; also sane epileptics and feeble minded. The reasons for such recommendation are set out elsewhere. It should be preceded by proper provision for the two classes last named elsewhere.

2nd.—Amended so that the three nearest adult relatives may have the right to waive the present required ten days' notice of trial for lunacy. Such an amendment will serve to bring at once into the care of the Sanitarium acute cases of insanity who in many instances are now kept in jail for ten days awaiting trial.

3rd.—Amended so that any person who brings a patient to the Sanitarium and who shall, without the consent of the Superintendent, leave or abandon such patient on the Sanitarium grounds, shall be arrested and tried for the same in the courts of Baldwin County having jurisdiction in criminal cases, and

upon conviction shall be punished as for a misdemeanor. The object of such an amendment is apparent.

4th.—Amended so that nine members shall constitute the membership of the Board of Trustees; that at the first appointment three shall be appointed for two years; three for four years and three for six years, and thereafter three shall be appointed every two years for a term of six years. Such an amendment to become effective on the expiration of the terms of the present membership. The Sanitarium has grown too large and its interests too vast to entrust its management into the hands of inexperienced men every two years.

5th.—Amended so as to permit the Board of Trustees to secure the services of an attorney at law as its legal adviser as occasion may require.

6th.—Amended so as to change the name of the Sanitarium from the "Georgia State Sanitarium" to the "Georgia State Hospital for the Insane." The latter title more accurately indicates its functions.

### Finally.

The care of so great a number of afflicted fellow citizens presents many problems requiring wise solution. Some of these are brought out in this report and to their solution the Board has given its best judgment. It cannot but believe that an increased liberality by the General Assembly in dealing with it, now so much needed, will be warmly sustained by the people of Georgia.

Superintendent Jones has the affairs of the Sanitarium well in hand. Under his wise direction an excellent year's work has been accomplished. The Board has nothing but commendation for him and for the members of his staff, both medical and business, each of whom has willingly and cheerfully met and discharged their respective duties.

The Board appreciates most highly the courteous and sympathetic consideration shown it by your Excellency in the

discharge of the responsible duties placed in its hands. These duties it has faithfully endeavored to discharge.

Respectfully submitted,

Board of Trustees.

## Report of Superintendent

For the Year Beginning January 1st, 1910, and Ending December 31st, 1910.

Georgia State Sanitarium, January 1st, 1911.

To the Honorable Board of Trustees,  
Georgia State Sanitarium.

Gentlemen:—I respectfully submit for your official consideration the sixty-seventh annual report of this institution for the year ending December 31st, 1910.

On January 1st, 1910, there were white patients on hand, 2,203 and colored 1,003. There have been received since, 602 whites and 394 colored, making a total reception of 996.

There have been discharged, removed, eloped and died, 855, leaving in the institution 3,347 on January 1st, 1911, of whom there are 111 whites and 25 colored on furlough, not discharged.

The average number of patients under treatment during the year was 3,276, while the total number receiving treatment was 4,202.

It will be seen that the average number receiving treatment was 117 more than last year.

The actual number of patients on hand January 1st, 1911, over the actual number on hand January 1st, 1910, is 132.

Our per capita has been as follows:

Annual, \$137.48; monthly, \$11.46; weekly, \$2.64; daily, .37665; average monthly expenses, \$37,532.35, making total expenses for the year just ending \$450,388.28—\$8,041.46 of this amount being spent on new pavilions for tubercular patients, leaving \$442,346.82 the actual amount spent for maintaining the institution.

You will call to mind that our annual appropriation was \$424,422.00. Finding that we could not maintain the institution on this amount you appealed to the Legislature for a supplementary appropriation of \$25,000.00, which they very

generously granted, making the total appropriation amount to \$449,422.00.

The annual and supplementary appropriations for 1911 are \$465,992.00, which is \$15,172.00 more for maintenance this year than we had last. Estimating the number of patients to be cared for as 3,376 the same per capita cost will require \$464,132.00 to support them. It will readily be seen that we will have to practice close economy, and not be able to make the many urgent extraordinary repairs and enlargements that are needed.

We asked for special appropriations last summer to make additions to the white laundry which our Engineer now estimates will cost \$6,240.00.

In this estimate he finds that a brick addition to the present boiler room, a new brick chimney, new steam boiler, three new washing machines, two body ironers, ironers for shirts, collars and cuffs, a hydro-extractor, etc., are necessary to put the laundry in proper condition to do the great amount of work that is necessary to keep clean clothes and bedding for the large and increasing number of patients in our institution.

Next for enlargement of Negro Building, kitchen and boiler room, with new floors, new boilers and much new cooking apparatus, estimated cost \$14,498.00.

Next, enlargement of the general storehouse which he estimates will cost \$2,651.00. Concrete floors in 134 bath rooms, \$7,885.00. Wood ceiling in place of old plaster that is rotten and constantly falling, thereby endangering the lives of the patients in the Powell Building, both detached buildings and parts of negro building, \$9,005.00.

Painting all outside woodwork, \$2,592.00.

Repairs and painting all employes' cottages, \$2,475.00.

Floors on wards and platform of storehouse, \$3,016.00.

Painting all tin roofs, \$1,326.00.

A covered reservoir for the purpose of holding a larger amount of water in reservoir at the institution, \$15,000.00.

These needs are urgent, most of them, but we will not be able to make them out of the present appropriation. Expenses are increasing every year proportionately, and unless

we get larger appropriations we cannot keep the institution up to the standard of first class hospitals of its kind.

I would most urgently recommend that we ask for 50 cents per capita per diem. This amount would enable us to keep the institution in good repair, and maintain it for the maximum of usefulness.

While on this line it might be well to mention other needs of the institution. As was shown in our report last year, \$8,000.00 was asked for to finish one wing of the Twin Building. This being done we would have room enough for the white males for some years to come.

We asked for new additions to the negro building to accommodate three hundred patients. This is a great necessity as we are more overcrowded in this department than anywhere else. It was thought that \$100,000.00 would be required for this work. We also asked for the erection and equipment of a building for the acute insane. There were 996 patients received during the last year, and all of them have to go through a thorough course of examination physically and mentally, and notes made on each case for days, and sometimes weeks, before they can be properly classified; hence, you see the importance of such a building. This building would relieve the crowded condition in the white department so that we would not be forced to use the dormitory rooms that were intended for sitting rooms for sleeping quarters. It is getting to be a serious question now to know where to put our white female patients; it is utterly impossible to classify them properly in our present quarters. Then the children's quarters are overcrowded. \$35,000.00 was thought to be sufficient to build and equip suitable quarters for this purpose. A nurses' hall is thought to be a necessity for the rest and comfort of the white female nurses after being on arduous duty for twelve to sixteen hours during the day. They are now compelled to sleep on the wards where the patients sleep, and many a night they get very little rest on account of the noise that is kept up.

I am happy to say that the State Legislature last summer appropriated \$15,000.00 for the building of tubercular pavilions for our consumptive cases. This appropriation had been

asked for so many times and not given until we had almost despaired of ever getting it. Since this appropriation was made we have completed four pavilions, two for whites and two for colored, and have all of the tubercular cases comfortably segregated from other patients. This fills a long felt want.

Since noting more carefully the physical condition of patients as they are received it has been found that a much larger per cent. of cases have tuberculosis when they come than was once thought, and that all of them do not contract the disease after coming here. Of the one hundred and fifty-five (155) cases reported for the year, eighty (80) were found to be diseased when received.

I believe pellagra is getting to be a greater menace to the health of our people than tuberculosis. One hundred and seventy (170) cases of this disease reported for the year, making fifteen (15) more cases than of tuberculosis, and of this number seventy-six (76) deaths, while sixty-five (65) deaths are reported from tuberculosis. Of the one hundred and seventy cases reported fifty-three (53) had pellagra when received. While this disease is not thought to be contagious, the Clinical Director has made some effort to segregate these cases, though lack of room has prevented as complete separation as we would like to see. So far as I know no definite conclusion has been reached as to the cause of this trouble. Diseased maize was thought to be the cause, but as so many cases have been found who never ate corn in any form, other causes have been sought—some now claiming that a certain fly produces it. I believe that we are in the dark concerning this dreaded malady—more to be dreaded than tuberculosis, for it is so much more loathsome and depressing. Most cases are depressed, and many merge into insanity, while you rarely find a case of tuberculosis who is not cheerful and hopeful. With plenty of fresh air, sunshine and a liberal diet many cases of tuberculosis recover if it is recognized and treatment given in time.

I will not go into details concerning the health of the institution as you will get this information from the Clinical Director's report. You will also learn from his report that we

have not progressed in the matter of furnishing employment and amusements for our people. This is all for the lack of funds. We should have industrial shops where shoes and brooms could be made; sewing rooms, etc., where tailoring could be done. This would afford occupation for a good many who will not work on the farm and garden. You know, as has been so often reported, of the good that is done in the garden and on the farm; that the crops are not only profitable, but those who are employed in these pursuits are the most contented and healthful class of our people. About the usual number has been employed in the garden, on the farm, grading, in the kitchens, dairy, laundry, sewing, etc.

We have followed the usual custom of paroling patients. Frequently patients improve to a certain degree, and get to be on a standstill when a change would do them good. If they have been here long enough to reach that condition, and seem to be harmless, and we do not think they will be a nuisance to the community in which they live, and their relatives request it, we allow them removed on a ninety-day furlough. Also quite a number who seem to have recovered go on furloughs when we are somewhat apprehensive of relapses, so they may be returned without a new commitment. Quite a good many continue well, and remain at home, while others have to be returned before their furloughs expire. During the year a good many eloped from the institution. Some remain away, but most of them are returned, sometimes at a considerable cost to the institution. Some of them seem to have a mania for escaping, and give us a lot of trouble.

The Legislature passed a bill at its last session granting us the authority to establish a training school for white females, and give certificates of graduation. This school was opened in October, and a good number of the nurses enrolled, but more than half of them have dropped out, but we still have a good class, and they are making good progress. Two of our male nurses desired to take up the course of study, and were allowed to do so. They are studious and make good pupils. I would recommend that our Charter be amended so as to include white male nurses. We had hoped that opening the school would induce many more young women to apply for

positions that they might get the advantages of the school, but so far our hopes have not been realized. Most of those in the class come from among the faithful ones who have been connected with the institution for some length of time.

We are still short of help in the white female department. I am sorry to say that a good many among our best nurses are constantly leaving our service, some to go to other institutions where they get better pay, and some go to business schools where they learn stenography and typewriting. Others get positions as clerks, in stores, etc. I trust that we may get appropriations for the next two years large enough to increase the pay of some of our employees, more especially the nurses and attendants.

You will see from the Farm Steward's report that the crops at the Colony last year were very good. We did not make as much syrup as usual on account of the drought in the late summer and fall, but all other crops were up to the average, or better. We had a fine crop of peaches from which about fifty thousand pounds were canned, and the patients are enjoying them once a week during the winter months. The dry weather continued so late that our fall gardening was almost a failure—hence a scarcity of vegetables. Sweet potatoes have been plentiful, and we have had some turnips, collards and rape.

The dairy has yielded a nice supply of milk, and our sick and feeble cases have not suffered for this very essential diet without which we could not run a hospital. In the fall we bought an extra amount of feed, cotton seed meal and hulls, believing they would be higher later on. By making this outlay the net proceeds will not show as much as last year. We are increasing the number of milkers occasionally by adding a few young cows that we have raised. All three of the silos were filled this year, making about six hundred tons of silage—enough to furnish green feed for all the milch cows during the fall and winter months. This is a very valuable adjunct to the dry feed, increasing the flow of milk and keeping the stock in good healthy condition.

The pond, our source of water at the Colony, came very near drying up last fall. If it had fallen about one more foot

we would have been without water for the stock, bathing and cooking purposes. I would recommend that some steps be taken to insure a supply in case of another such drought.

### Religious Services.

Rev. D. W. Brannen, Pastor of the Presbyterian Church in Milledgeville, was our Chaplain from November 1st, 1909, to November 1st, 1910. Rev. Lamar Sims, Pastor of the Baptist Church, was elected in October as Chaplain for the year beginning November 1st, 1910, but later accepted a call to the First Baptist Church of Albany, Georgia, and Mr. Brannen has been conducting the services, and will continue until you elect a successor to Mr. Sims.

### Library.

The Library is still in charge of Mr. D. E. Kibbee. While his health is not robust, with the aid of Mr. Merrill, one of the patients in the Convalescent Building, everything is kept in good order. We are indebted to our friends for quite a good lot of magazines, books, daily and weekly newspapers mention of which will be made in the Librarian's report.

I would again urge the amendment to the law requiring ten days notice to be given to three of the nearest adult relatives before a patient can be committed to this institution. No one can know, as we do here, the great need of this amendment. Hardly a week passes that we do not get urgent requests to take a patient at once; let them waive the ten days notice as the patient has been taken suddenly; is very violent, and will have to be guarded day and night or go to jail unless he can be admitted. No man with any sympathy for his fellowman would refuse such a request if he could grant it without a violation of the law. The law says "relatives cannot waive the ten days notice." Would anyone like to go to jail because he was sick? Insanity is no crime for which people should be sent to jail. It is a disturbance of the mind, a disease if you please, which should have the earliest and best treatment that could be had. Do not send your brother to

jail there to suffer, and perhaps die for want of proper care and treatment, waiting for what? For ten days to expire before he can be committed to the place the State has provided for his care. Such a law is a disgrace to civilization!

As you know, a special Legislative Committee visited the institution in November, 1909, and spent ten days investigating certain charges that had been made and published to the world against the management of the Sanitarium. This committee invited everyone who had any complaints or charges to make to appear before them. They were very thorough in this investigation, going into every detail of the charges, and the management in every particular. I am glad to say that this committee treated us fairly, and gave us every opportunity to prove the falsity of the charges, and when their report was made to the General Assembly last summer it was all that we could have asked for—a complete vindication.

The institution lost a very valuable officer when Mr. W. A. Gillespie, Assistant to the Steward, died last September. He had been with us about seven years, and I think I can well afford to say that the institution never had a more faithful and loyal officer—beloved by everyone who knew him and came in contact with him. At the October election Mr. Homer Bivins of Milledgeville, was elected to fill his place. At this election Dr. Bernard Cline and Dr. G. L. Echols, who had been serving as internes, were put on the Medical Staff as Assistant Physicians. Dr. J. I. Garrard, who had also been serving as interne was at Hot Springs, Ark., at that time where he had gone for his health, and was not able to stand the examination; hence, is still serving as interne. Dr. W. F. Tanner of Milledgeville, has accepted a place as medical interne.

Dr. R. C. Swint, who has been serving very acceptably on the Medical Staff for quite a number of years, has resigned to accept a position with the Rawlings Sanitarium at Sandersville, on the 15th of January. Such men as Dr. Swint are rare, being an able physician, strictly moral, and thoroughly reliable in every particular.

Dr. J. C. Richard left us on the first of November to open a dental office in Milledgeville, and Dr. George Green, of Kentucky, is doing our dental work until a dentist is elected.

Dr. J. H. Hewitt has been acting as pathologist since the latter part of last May, but will be with us no longer.

No other changes have taken place in the corps of officers.

For further details would respectfully refer you to the reports made by other officers at the head of the different departments.

Thanking you for your support and kind consideration.

Respectfully submitted,

L. M. JONES, Superintendent.

## Report of Clinical Director

Dr. L. M. Jones, Superintendent,  
Georgia State Sanitarium.

Dear Sir:—I beg to offer the following report of the Medical Department of the Sanitarium for the year ending December 31, 1910.

The plan of work which was outlined in the report for 1909 has been carried out during the past year. A few minor changes were made, however, as they seemed to be advisable in order to secure a more efficient service. For reasons previously stated our efforts have been concentrated upon the reception service, but the wards for chronic patients have not been neglected, on the contrary they have received more attention than ever before from the physicians having charge of them.

Staff meetings have been held daily at 8:30 A. M. except on Sunday. These meetings consume one hour, the physicians going to their respective services immediately after their conclusion. No feature of our work has proved of more interest or value than these meetings at which the recently admitted patients are presented and their histories are discussed. By them, interest in mental diseases has been stimulated and a larger portion of our time is being given to the study of such conditions. With the increased activity in this department of our work there has been a more thorough examination of the physically ill and an added attention to the details of treatment which are carried out on our hospital wards.

Of the 996 patients admitted to the Sanitarium during the year, 948 were presented at the Staff meetings. Of the remaining 48 some died a short time after reception, while others were removed by relatives. A number in whom the diagnosis was unquestioned had no second presentation, while all the others came before the Staff a second time, after additional information in regard to them had been obtained through observation or correspondence with relatives. Many of the more obscure cases were presented for a third time.

We are greatly handicapped in arriving at a clear idea of our patient's condition previous to admission by the fact that only in exceptional instances are we able to see their relatives and secure satisfactory anamneses. The history blanks sent with the patients are as a rule carelessly filled out and are in many cases actually misleading, while our correspondence with their relatives is seldom productive of reliable information.

During the past year 3,863 cases of acute illness were reported, though this number does not include every case under treatment. Among them were 10 cases of typhoid fever, four of which occurred in employees who are away from the institution several days in each month. One patient was admitted in whom the disease was well developed. The five remaining cases were found in patients who had been in the institution for a short time only.

Two cases of scarlet fever occurred in the early part of the year in children who had been in the institution for a number of months. The origin of neither was discovered. Owing to prompt measures of isolation and disinfection there was no spread of the disease.

We have at present seven pavilions for the tubercular patients. All of them are filled, with the exception of the one for white males. It was formerly thought, and so stated, that almost all of our cases of pulmonary tuberculosis originated in the institution, but the records for the past year show that 53.5 per cent. of these patients gave evidence of the disease on their initial examination a few days after reception.

One hundred and seventy cases of pellagra were reported during the year, and of this number 53 presented the characteristic lesions of the disease on admission while in three additional instances it was suspected. In many of the cases reported, pellagra was not suspected on admission but developed within a few weeks, showing that its cause had been active for some time and that conditions at the Sanitarium were not responsible for it.

Among the admissions for 1910, chronic disease of the heart was discovered in 121 instances, more than 12% of the patients suffering from valvular or other organic lesions.

One suicide occurred during the year. The patient was a white male. While alone in his room he hung himself by means of a strip of cloth which he had torn from an undergarment.

One patient died from injuries inflicted by her room-mate. Neither of these patients had manifested any inclination to be violent, both having been in the institution for many years, and no danger to either was apprehended from their sleeping in the same room. Except for the fractures reported later, no other serious accidents have occurred though the usual number of minor injuries have been noted.

The surgical work has been in excess of that done in any previous year. 484 operations have been reported, including those of a minor character and excluding the reduction and treatment of fractures and dislocations. In three instances death followed operation. One patient died of acute cardiac dilatation a few hours after being returned to her bed following an amputation of the foot; one died of dysentery which begun on the second day after an operation for appendicitis; the third patient died after a double salpingo-oophorectomy, and on autopsy a large retroperitoneal abscess was found which had evidently existed for some time.

All of the surgical work was done by the members of the Staff with the exception of two operations, one for vesico-vaginal fistula, one for pyosalpinx which were performed by Dr. Wright of the Board of Trustees.

As will be seen by an accompanying table, pellagra and pulmonary tuberculosis are responsible for the greatest number of the deaths which occurred during the year. To the former is attributed 76 deaths or 16.9% of the whole number; to the latter 65 deaths or 14.4%.

In 20 instances the cause of death was undetermined. This uncertainty is accounted for by the fact that many of the number died suddenly, while several others lived only a few hours after being admitted to the Sanitarium and as no autopsy was allowed they could not be otherwise recorded.

Our record of recoveries is unusually low, but as stated in my former report, this is due to the policy of allowing relatives to remove harmless patients on furlough, before recovery is

complete, if it appears that a return to their homes will not prove injurious. Undoubtedly, the greater number of those so removed recover before the expiration of their furloughs, but as we are seldom informed of their subsequent condition they are discharged at the end of 90 days as "improved" or "unimproved" as their condition is recorded at the time of removal.

With our unsatisfactory anamneses we cannot offer reliable statistics in regard to the influence of heredity in the patients admitted to the Sanitarium, but in spite of this fact we were able to obtain a history of insanity or nervous disease in the ascendants of 310 of the 996 patients received during the year.

Quite a large proportion of the patients admitted in 1910 were assigned to groups from which recovery cannot be expected. This is due in a large measure to the fact that the State provides no other accommodation for the epileptic or the feeble minded and that there seems to be a disposition to relieve the counties of the care of many senile cases which might be cared for in alms houses or in private families. 587 patients, 58.9% of all admissions were classified as follows:

Dementia praecox .....	159
Senile psychosis .....	108
Paresis .....	51
Psychosis with Nervous or Brain disease.....	43
Paranoic condition .....	10
Imbecility or idiocy .....	81
Constitutional inferiority .....	25
Epilepsy .....	100
Total.....	587

The accompanying tables show the number of patients received during the year, with their diagnostic grouping; table II gives the percentage ratio of each group based upon the whole number of admissions, as well as that by race based upon their respective admissions.

TABLE I.

FORM OF PSYCHOSIS	White		Colored		Total
	Men	Women	Men	Women	
Traumatic psychoses .....	3	...	1	...	4
Senile psychoses.....	32	24	30	22	108
Dementia paralytica .....	11	5	27	8	51
Psychoses with other brain or nervous disease.	13	18	7	5	43
Alcoholic psychoses .....	18	1	5	...	24
Drug and other toxic psychoses .....	13	7	1	...	21
Infective-exhaustive and autotoxic psychoses..	15	24	14	14	67
Allied to infective-exhaustive psychoses.....	1	4	2	1	8
Involution melancholia .....	6	2	...	...	8
Depression undifferentiated .....	5	11	...	...	16

Paranoic condition .....	1.3	0.5	1.0
Manic-depressive psychoses .....	15.6	14.7	15.2
Allied to manic-depressive psychoses .....	3.4	3.5	3.5
Epileptic psychoses .....	10.9	8.6	10.0
Hysterical, psychasthenic and neurasthenic psychoses	1.0	....	0.7
Other constitutional disorders and inferiorities.....	3.8	0.5	2.5
Imbecility and idiocy .....	9.8	5.5	8.1
Not insane .....	0.1	0.5	0.3
Unclassified .....	3.1	3.7	3.4

### Manic-Depressive Psychoses.

The number of patients assigned to this group is 152 or 15.2% per cent. of the whole number admitted. In our report for 1909 nearly 25% of all admissions were so classified. This discrepancy can be explained by the fact that during the past year all diagnoses followed examination and discussion by the whole Staff, where formerly each physician in charge of a reception ward classified the patients admitted to his service.

According to the clinical manifestations, the group was sub-divided as follows:

	White	Colored	Total
Manic attack .....	56	47	103
Depressed attack .....	24	6	30
Circular attack .....	2	3	5
Mixed attack .....	12	2	14
Total.....	94	58	152

Of these 152 patients, 60 gave a history of former attacks.

One previous attack .....	24
Two previous attacks .....	15
Three previous attacks .....	10
Four previous attacks .....	1
Five previous attacks .....	1
Six previous attacks .....	4
Seven previous attacks .....	1
Eight previous attacks .....	1
Several previous attacks .....	3
Total.....	60

Even with our unsatisfactory information in regard to the family history of these patients we obtained a history of insanity or nervous disease in one or more members of the family in 77 instances, or 50.6%.

#### Allied to Manic-Depressive Psychoses.

To this group were assigned 35 patients, 3.5% of the whole number admitted. In 20 of this number a family history of insanity or nervous disease was obtained.

#### Dementia Praecox.

This group forms the largest one in our table of classification, giving a percentage ratio of 15.9 as opposed to 14.3 so assigned in our report for 1909. It is of interest to note that the percentage of negro patients falling into this group is much larger than that found in any other.

According to the clinical symptoms the type of the disease was as follows:

Hebephrenic form, including simple deterioration.....	70
Katatonic form .....	31
Paranoid form .....	58
Total.....	159

Those cases, among the negroes, presenting vague ideas of "poison" and "spells" were not included in the paranoid form, as in this race such ideas are common to the sane and

insane alike and show no marked departure from what is normal to them, as every illness or temporary emotional change is usually ascribed to such influences. These cases were grouped with the hebephrenic forms unless definite persecutory ideas accompanied them.

A family history of insanity or nervous disease was obtained in 78 of the patients assigned to this group, while in 35 additional instances no facts in regard to this point could be elicited.

### Allied to Dementia Praecox.

Under this heading were included 39 patients, 15 of whom were white and 24 were colored. Of this number, a neuropathic heredity was obtained in twenty.

### Senile Psychoses.

To this group were assigned 108 of the cases admitted or 10.8% of the whole number.

The clinical types represented were as follows:

Deterioration .....	72
Delirious and confused .....	15
Depressed and agitated .....	3
Excitement .....	2
Agitated and confused .....	4
Presbyophrenic .....	5
Paranoid .....	7
Total .....	108

### Dementia Paralytica.

The fact that admissions to this institution are chiefly from the villages and from the rural districts, accounts for the comparatively small number of cases diagnosed as general paralysis. In such environment syphilis is less common than in the densely populated localities and opportunities for dissipation are few. The percentage of general paralysis in members of the negro race was almost four times as great as in the white race. This condition is not surprising when we rec-

ognize the prevalence of syphilis in that race and that only in rare instances do those infected continue treatment after the superficial evidences of the disease disappear.

A few lumbar punctures have been made for diagnostic purposes, but we have been without a pathologist for the greater part of the year so this aid to diagnosis has not been taken advantage of as frequently as we hope to do in the future.

In the 51 cases of this group a history of syphilitic infection was obtained in 36 instances, that of a probable infection in 6 additional ones. In five cases no history was obtainable and in four syphilis was denied. In those instances in which reliable information was secured a luetic infection was noted in 90%.

### Alcoholic Psychoses.

Only 24 cases were assigned to this group. This is doubtless accounted for in part, by the prohibition laws of the State, and, as stated above, by our patients being drawn chiefly from the country and the small towns where opportunities for securing alcohol are not at hand.

The clinical forms presented were as follows:

Chronic alcoholism .....	10
Delirium tremens .....	4
Acute hallucinosis .....	5
Deterioration .....	2
Korsakow's syndrome .....	1
Paranoid state .....	2
Total.....	24

### Drug and Other Toxic Psychoses.

This group is composed of 21 cases; the etiologial factors being:

Morphine .....	10
Morphine and cocaine .....	4
Morphine and alcohol .....	3
Morphine, cocaine and alcohol .....	1
Morphine, hyoscin and alcohol.....	1

Cholera mixture .....	1
Lead intoxication .....	1
	<hr/>
Total .....	21

### Psychoses With Other Nervous or Brain Disease.

In this group were included 43 cases, in which the mental symptoms accompanied nervous diseases or followed brain lesions.

The associated condition is shown below:

Amyotrophic lateral sclerosis .....	1
Acute chorea .....	3
Cerebral arteriosclerosis .....	21
Cerebral hemorrhage .....	2
Cerebral syphilis .....	7
Combined lateral and posterior sclerosis .....	1
Huntington's chorea .....	2
Multiple sclerosis .....	1
Tabes dorsalis with multiple neuritis .....	1
Tabes dorsalis .....	2
Undetermined .....	2
	<hr/>
Total .....	43

### Infective-Exhaustive Psychoses.

This group is composed of 67 cases, which in addition to the mental symptoms of the psychosis gave a history of an infective or an exhaustive process to which they could be attributed. That this group is larger than has formerly been the case, is due to the fact that pellagra has increased in frequency and is so often accompanied by a delirious type of reaction.

As the causation of pellagra is still undetermined and as the mental manifestations of this disease so often correspond with those found in other infective-exhaustive states it was thought best to group such cases here rather than with the toxic psychoses.

The etiological factors are shown in the following table:

Chronic enteritis .....	1
Chronic gastric catarrh .....	1
Gastric ulcer with subphrenic abscess .....	1
Malarial fever .....	4

Multiple neuritis .....	1
Pellagra .....	30
Pellagra with pulmonary tuberculosis .....	4
Pulmonary tuberculosis .....	11
Puerperal infection .....	1
Small pox .....	2
Thyreogenous disorders .....	2
Typhoid fever .....	4
Valvular heart disease with chronic nephritis .....	2
Undetermined .....	3
Total.....	67

### Allied to Infective Exhaustive Psychoses.

Under this heading were placed 8 cases about which there was a considerable degree of uncertainty on account of failure to satisfactorily account for the symptoms presented or where it seemed probable that the condition was only a temporary phase of an undeveloped psychosis which could later in its course be more accurately grouped.

### Involution Melancholia.

This group is composed of only 8 cases, 6 being white males, 2 white females. The number so classified grows smaller each year, as a closer study of them leads to the recognition of features which cause them to be included with the manic-depressive or the senile cases.

### Undifferentiated Depression.

The 16 cases classified as undifferentiated depression all occurred in the white race; 5 of them were men and 11 were women. This group is made up of those depressions which cannot be otherwise assigned as they present only this one symptom for which there is no determinable cause.

### Paranoic Condition.

A more thorough study of the patients formerly assigned to this group has resulted in a steady reduction in the number

so classified. Many of these patients are found to be cases of dementia praecox paranoides, while in many the paranoid symptoms are only features of other psychoses. There remain a few cases however, in which the symptoms are sufficiently distinctive to warrant assignment to a separate class. Under the heading of paranoic condition we include 10 cases.

### Imbecility and Idiocy.

This large group forms 8.1% of all admissions for the past year. As noted earlier in this report the State makes no provision for the care of such cases, consequently those who cannot be kept in poor-houses are committed to this institution. Of the 81 patients so classified, 9 were idiots, while in the remaining number were found all higher grades of mental enfeeblement.

### Other Constitutional Disorders and Inferiorities.

Under this broad heading are classed those ill-balanced individuals who show little or no intellectual deficiency, but present a weakness of judgment, indifference to consequences, lack of sound moral instincts, criminal tendencies or sexual perversions. Many of them manifest in addition ideas of a paranoid character, transitory emotional outbreaks or hallucinatory episodes. Of the 25 cases here included a family history of insanity or nervous disease was obtained in 18, while in only four instances was such a history denied.

A further classification of these cases was made into

Constitutional psychopathic state .....	5
Constitutional inferiority .....	20

### Hysterical, Psychasthenic and Neurasthenic Psychoses.

This group is composed of 7 cases, distributed as follows:

Hysterical .....	2
Psychasthenic .....	2
Neurasthenic .....	3

### Epilepsy.

Ten per cent. of all patients admitted to the institution during the past year suffered from epilepsy. The laws of the State require us to receive epileptics regardless of their mental condition. In only a few cases, however, were mental changes not noted among those received during 1910. Of the 100 patients admitted a neuropathic heredity was acknowledged in 34, a history of paternal alcoholism was given in 9 additional instances, while in 24 no facts in relation to these points could be obtained.

The clinical manifestations of the disease was as follows.

Deterioration .....	72
Excitement .....	14
Hallucinatory excitement .....	5
Dazed state .....	3
Paranoid state .....	2
No mental change noted .....	4
Total.....	100

### Traumatic Psychoses.

Four cases were assigned to this group, 3 white males, 1 negro male. The clinical forms presented were:

Post-traumatic constitution .....	2
Traumatic defect condition .....	2

### Unclassified.

In many instances we are unable to obtain any information whatever in regard to the condition of the patients previous to admission, and unless the symptoms manifested are distinctive enough to warrant assignment to one of the diagnostic groups we prefer to leave them unclassified. In other instances obscure or complex symptoms preclude a diagnosis. By reference to table I it will be seen that 34 cases, 3.4% of all admissions are so recorded.

In the accompanying tables will be found a statement of the age, civil condition, occupation and etiological factors in

the psychosis of each patient admitted to the institution during the year ending December 31st, 1910; also the form of psychosis of those discharged with their condition on discharge, the physical diseases treated, the surgical operations performed and the number and causes of deaths.

## Report of Superintendent of Nurses.

To the Board of Trustees,  
Georgia State Sanitarium.

I herewith submit to you my report of the Training School, which about closes the last half of the first year.

There have been but few changes since my last report, there being three to drop out, one on account of health, one unable to stand examination, and one to get married. One out three months unable for duty, and one entered that was out the first half on account of health.

The nurses have shown no lack of interest and general efficiency.

I present to you with this, a short summary of each nurse since entering the institution, together with the rating of each.

This is done with the consideration I believe due them—that the interested Board of Trustees might know the service of each nurse prior to the beginning of her training.

We have to date 14 nurses in training.

We have altogether 122, with 29 vacancies.

We had to resign, the past three months, 26, and received 22 probationers.

All the examinations have not been held, hence the blanks.

I should like, if possible, to send a nurse off during vacation months to take a special course in Massage.

I also ask, if possible, to give us a much needed diet kitchen and class room.

Please allow me to voice all the nurses with myself, in extending thanks to each member of the Board, who has done so much and shown so much interest in the Training School and institution. We are grateful too, to all officers who have been so helpful and interested. This, the first year, has been one of hard and unremitting work, accompanied at times by great mental strain.

(Signed)

A. V. CROSS,  
Superintendent Nurses.

April 18, 1911.

### Apothecary Department

Dr. L. M. Jones, Superintendent,  
Georgia State Sanitarium,

Dear Sir:—The following is the report of the Operating Department from January, 1910, to January, 1911.

It being the policy of this department to manufacture all pharmaceuticals and preparations used by the institution, we have done so at all times when it was necessary to do so, restricting purchases to chemicals and such preparations as were required by the physicians.

#### Statement.

The following is a statement of all expenditures, etc., for this department from January, 1910, to January, 1911.

Amount of drugs purchased, including all druggist sundries, dental and laboratory supplies, etc—all preparations for fumigation, disinfecting and sanitary purposes; also all alcohol, wines and whiskies .....	\$ 4,300.19
Amount of drugs sold to officers .....	356.95
Amount of drugs on hand .....	2,237.80
Amount of Fixtures, etc.....	385.50
Number of Prescriptions Filled, 31,167.	

Respectfully submitted,

D. S. CARRINGTON,

Apothecary, G. S. S.

## Report of Treasurer

Milledgeville, Ga., January 3, 1911.

Dr. L. M. Jones, Superintendent,  
Georgia State Sanitarium.

Dear Sir:—I beg to submit herewith a statement of my receipts and disbursements of my office as Treasurer for the fiscal year.

### RECEIPTS.

January 18, 1910—	
Balance .....	\$ 37.11
January 3, 1911—	
Total receipts from State Treasurer.....	454,463.46
Total receipts from Steward.....	13,274.04
	<hr/>
	\$467,774.61
January 3, 1911—	
Total disbursements .....	457,155.57
	<hr/>
Balance on hand.....	\$ 10,619.04

I attach hereto Certificate of the Merchant's & Farmer's Bank which is a part of my report.

Respectfully submitted,

L. H. ANDREWS, Treasurer.

Milledgeville, Ga., January 3rd, 1911.

This is to certify that the balance to the credit of L. H. Andrews, Treasurer of the Georgia State Sanitarium, and subject to his check at the close of business this day is Ten Thousand and Six Hundred Nineteen and 4-100 (\$10,619.04) Dollars.

Signed,

L. C. HALL, Cashier.

Attest:

JNO. T. DAY, N. P. Baldwin County, Ga.

## Report of Steward

Milledgeville, Ga., January 2, 1911.

Dr. L. M. Jones, Superintendent.

Dear Sir:—Permit me to transmit through you to our Honorable Board of Trustees, this my report as Steward, for the year 1910.

Abstract "A" shows overdraft of \$54.24 brought over from 1909, also amount drawn from State Treasurer, with a classified statement of disbursements, etc.

Abstract "B" shows the expenditures on account of subsistence.

Abstract "C" shows the expenditures on account of clothing.

Abstract "D" shows the expenditures on account of fuel and transportation.

Abstract "E" shows the expenditures on account of Officers Pay-rolls.

Abstract "F" shows the total amount of Employees' Pay-rolls.

Abstract "G" shows the expenditures on account of incidentals.

Abstract "H" shows the expenditures on account of medical supplies.

Abstract "I" shows the expenditures on account of contingencies.

Abstract "J" shows the expenditures on account of stationery and postage.

Abstract "K" shows the expenditures on account of special appropriation for water-works.

Abstract "L" shows total amount of requisitions drawn on State Treasurer.

Abstract "M" shows average number patients for the year, together with the cost of maintaining same.

The past year supplies were much higher than they have been for several years. This, together with some increase in wages, has caused our per-capita to reach .37.665.

In compliance with the law, duplicate vouchers of the expenses, accompanied by the required certificate, approved by yourself, and audited by the Board of Trustees, have been filed in the Executive Department, Atlanta.

I have devoted my entire time, as required by the rules to the Steward's work, and have to the best of my ability, discharged the duties incumbent upon me.

Respectfully submitted,

L. J. LAMAR,  
Steward, Ga. State Sanitarium.

**ABSTRACT A.**

Shows all money received from State Treasurer, with a classified statement of disbursements, from January 1, 1910, to January 1, 1911.

Also Petty Cash Collections made by Steward from April 12, 1910, to January 1, 1911.

Jan. 1, 1911—

**(Dr)**

To State Treasurer .....	\$457,463.46
To Petty Cash Collections .....	2,314.40

\$ 459,777.86

**(Cr)**

Jan. 1, 1911—

By Overdraft .....	\$ 54.24
Subsistence .....	158,298.39
Clothing .....	61,457.98
Fuel and Transportation .....	27,914.87
Salaries .....	31,104.92
Wages .....	114,329.64
Incidental Expenses.....	49,723.89
Medical Supplies .....	5,490.88
Contingencies .....	874.58
Stationery and Postage .....	1,193.13

Total .....	\$450,442.52
By Balance Cash on hand .....	9,335.34

\$459,777.86

Jan. 1, 199—To balance cash on hand.....\$ 9,335.34

N. B. In addition to the above, there is a liability of \$13,469.85. Said amount representing the salary and wages pay-rolls for the month of December 1910. These being outstanding January 1, left us with a balance on hand, as shown above of \$9,335.34. Had they been paid in the month in which the indebtedness accrued, there would have been an overdraft of \$4,134.51.

## ABSTRACT B

## Report of Farm Steward

Near Milledgeville, Ga., January 2nd, 1911.

Dr. L. M. Jones, Superintendent,  
Georgia State Sanitarium.

Dear Sir:—I herewith hand you my report as Farm Steward for the year 1910, of the dairy, garden, farm, pork and transportation; also statement of stock, wagons, etc., on hand January 2nd, 1911. We have lost since the last report 3 milk cows and 17 calves, from what was thought to be Anthra, or black leg. We have received from the chicken yards during the year 3,098 dozen eggs, at market price would amount to \$619.60, and 320 pounds of turkeys, \$51.20.

Very respectfully,  
GEO. W. HOLLINSHEAD,  
Farm Steward.

## Engineer's Report

Milledgeville, Georgia, Jan. 1st, 1911.

Dr. L. M. Jones, Superintendent.

Dear Sir:—I have the honor to submit herewith my report of the workings of this department from January 1st, 1910, to January 1st, 1911.

Respectfully,

T. H. DeSAUSSURE,  
Engineer.

### Improvements.

The most important improvement of the past year was the building of four open pavilion wards for the accommodation of tubercular patients; one for the white females in the west yard of the T. O. Powell building, another for white males in the grove near the "Hospital" and two for male and female negroes in the grove south of the Negro Building. Each pavilion is entirely separated from the main building and is surrounded by a yard enclosed with a large mesh chicken-wire fence: that around the negro wards being ten feet high. The pavilions are all alike and accommodate twenty patients each. The body of each building is one hundred and two feet long and twenty wide, with a three foot overhang of roof all around. The central part, or that portion devoted to beds is weatherboarded and ceiled up to a height of three feet from the floor. Sash are provided which may be raised from pockets in the space between the weatherboarding and ceiling when necessary for protection in inclement weather, but they can not be raised more than three feet above the top of the boarding, thus ensuring ample space between the top of the sash and the boxing line for ventilation. On one end of each building there are four rooms, two for nurse's bedrooms and two for bath and toilets and on the other end a clothes room, a dining room and a diet kitchen. The pavilions for whites are supplied with hot water from the nearest main building, but those for the negroes being too far away to admit of this

they were placed near to each other and a Tobasco water heater in a small house between them serves both. The side walls of all rooms and overhead are all ceiled with wood; and all woodwork is dressed, painted and finished in enamel white. Every part is screened against flies and all openings on three of the buildings have the additional protection of heavy wire guards of open mesh.

Since using electricity as an illuminant and the discontinuance of the gas works we have added a gasoline gas machine to the equipment of the laundry. This supplies gas for the ironing machine and also for heating the coffee parcher in the bakery.

Twenty-seven of the direct radiators in the Negro Building have been made over and all of the radiator guards throughout the institution have been furnished with wrought iron hooks, cemented in the brick walls, on which they may be securely hung. Two radiators have been put in the examination rooms of the negro building and the rooms thoroughly overhauled and painted. A radiator has been added on both the ninth and tenth male negro wards.

Three improved adamantose water closets have been put in the negro building and three in the Powell building; the latter are in one of the day rooms and fill a long felt want in that direction.

The fire fighting equipment has been improved by the addition of 600 feet of 2 1-2 inch fabric hose to replace that quantity rendered defective by age.

Two shower baths have been put in during the year, one at the male convalescent building and the other in the Whittle. Both are supplied with hot and cold water and mixing valves. The wooden floors have been taken from these rooms and reinforced concrete ones put in with a central drain, making the whole floor waterproof and sanitary, the floor itself acting as a "receptor."

A fifteen horsepower electric motor has been bought for cutting ensilage at the dairy, and a truck built on which the motor is mounted. This enables it to be carried from place to place with ease and dispatch.

The following wards have been screened against flies:

A part of the 21st white female ward. The Infirmary ward of female negro building, Infirmary ward of male negro building and two wards on Cabiniss Building.

A new roof has been put on the pathological laboratory building, the interior walls have been done over and all of the wood work painted. The room below the autopsy room has been filled in one foot and a concrete floor with a cement top dressing put in. This room has been fitted with shelving on three sides and wired for electric lights. A 10 K. W. transformer has been put on a pole near by and the building wired in conduit for current to the various pieces of apparatus used therein.

A sheet iron hood 12 x 16 feet has been put up over the baker's oven in the kitchen of the Twin Building as a protection against fire.

A new shingle roof has been put on one of the old tubercular wards at the Negro Building.

The defective lime plastered ceiling has been taken down from two dining rooms and one pantry in the Powell Building and from two dining rooms in the West Detached Building and replaced with wood ceiling and painted.

A small house for storing gasoline has been built in the back yard away from all other buildings.

Five thousand three hundred and eighty three square feet of flooring has been laid on various wards during the year.

The exterior woodwork of three cottages has been painted and the interior work done over in paint and alabastine.

The interior woodwork and walls of the white female infirmary have been painted and enameled and the floors gone over with floor varnish and wax.

The following painting has been done also:

Eight cement rooms.

The wood work of the 18th and 19th female wards.

The entire second floor of the Center Building, with the exception of one room.

Three silos painted inside.

One room on third floor of Center Building.

First and second floors of Male Convalescent Center Building and front porch.

First and second floors of Female Convalescent Building and front porch.

The machinery and part of the woodwork of the water works, and such new work as was done by carpenters and mentioned elsewhere in this report.

Besides the ordinary repair work of the institution the following articles have been made and repaired in the several shops:

*Carpenter Shop.*

| 4 Stretchers canvassed.    | 18 Bridles repaired.       |
| 2 Tie reins made.          | 2 Wardrobes repaired.      |
| 3 Clothes racks put up.    | 1 Set of harness repaired. |
| 22 Reaper aprons made.     | 1 Wooden back put on.      |
| 33 Reaper shafts repaired. | 1 Halter made.             |
| 9 Sets of shelves put up.  | 5 Washstands repaired.     |

## Appendix

At a recent meeting of the Board of Trustees of the State Sanitarium it was deemed best to have the report upon the care and training of the imbecile, feeble minded children and youth, farther elaborated with the hope of bringing this important subject to the attention of the people of Georgia. It is a well known fact that for many years attention has been called to this subject and appeal after appeal made for this unfortunate class of four citizens by the various Boards of Trustees of this institution, to say nothing of the untiring efforts of the late Dr. T. O. Powell to have something done for the care and teaching of the class that was, and is now being sadly neglected in so far as their physical development and mental training is concerned. The feeling of those interested in so great a work as this, after so many appeals have been presented by those in a position to know the needs of the situation, is almost one of resentment; but when it is realized how little the public at large as well as those having the power of appropriation, know of the subject; and how much education is required in matters of this character in order that its importance be appreciated, we become more lenient and are willing to present the subject again, hoping that the day is not far off, when the State of Georgia will provide for, rather than banish into utter hopelessness, those who have the right to demand from her a place where they could be rightly and properly cared for.

Does it not seem strange that there are but two Southern States, Kentucky and Virginia, which maintain separate institutions in which their imbecile, feeble minded defective children and youth may be properly taught and cared for, outside of, and independently of their hospitals for the insane? Be it said to the credit of twenty-five other states of the Union that they have institutions and schools whose special object is to care for this class of people and whose reports will show are doing good work.

The time is one in which the endeavor is to uplift and raise humanity to a higher plane; this is noticeable in the current literature of today, for there is scarcely a magazine

which does not contain an article relative to the bettering of mankind, as for instance articles on prison reform, reformatory methods, child labor and juvenile courts as well as many others along the same line too numerous to mention, whose object and hope is to upbuild and help those needing care and protection. The State of Georgia has done nobly and is abreast of many of her sister states in her charitable institutions as shown by the State Sanitarium, and her schools for the deaf, dumb, and blind. In her educational institutions she is also doing well and maintaining a high standard. In view of these facts then why should the poor unfortunate defective children, already referred to, be neglected; and their appeal for help fall upon deaf ears, especially when we find such good, and noble work in their behalf in other states? It is a matter of surprise to see how even those, in whom there is not a ray of intelligence, are being brought from the creature to the being by the patience and tact of their teachers. And those more fortunate and so more capable of mental development are taught and advanced to a wonderful degree. One has but to read the wonderful article by Josephine Tozier, in McClure's for May, upon Maria Montessori's work in the "Mind straightening school," to see what results have been, and can be obtained.

For a clearer understanding of the subject it might be well to define the conditions of which we are speaking, by the term idiot is meant one deprived of higher mental power who may be taught or developed but whose mental capacity is only that of a child, the feeble-minded are those defective in judgment, though not to the same degree as the idiot or imbecile. The definitions here given are of the older class, the more modern ideas could be stated to be without understanding, destitute of ordinary intellectual power. Mentally weak or feeble of mind, which may be congenital or acquired. For ordinary purposes and without dealing in technicalities which may be confusing, let us use the term feeble-minded in its broadest sense as applicable to the class of whom we are speaking. Just here let it be understood and that most **emphatically** that children of this class **are not insane** and should not by any means be sent to, or confined in insane hospitals, for

in the language of Dr. W. A. Fernald of Waverly, Mass., an able worker and teacher in this line, "It is unjust to the insane and most unfair to the feeble-minded, never proving successful, but detrimental, to both classes of patients." Two incidents occurring at the State Sanitarium may be of use in illustrating some of the truths just stated relative to putting both classes in the same institution.

In the one instance a female patient enters the asylum at the age of twelve years, feeble of mind, but capable of mental and physical development, after spending sixty-four years in the institution is a child still, not in body but in mind, the State merely having cared for her without giving her such advantages as might have developed her mental faculties to the point of making her self supporting. The other, a girl of nine years, of rather pleasing appearance, with a show of intelligence in her face, is sent to the Sanitarium, and by force of circumstances is placed among the insane.

Those in a position to know stated that this child was capable of considerable development, the facilities for which, however, the State does not provide. In three months, the girl, from association with those much worse off than she, becomes insane and so hopeless as to any future benefit, and so becomes a care on the State for the rest of her life.

The object of an institution of this kind cannot be better stated than the following which I have taken the liberty of using verbatim and is from the Superintendent of Ohio's institutions at Columbus, Ohio, Dr. E. J. Emerick.

"Its object is to furnish special means of improvement to that portion of our youth who are so deficient in mind or have such marked peculiarities and eccentricities of intellect as to deprive them of the benefits of other educational institutions, and ordinary methods of instruction.

The education proposed will not only include the simple elements of instruction taught in common schools, where that is practicable, but will embrace a course of training in the more practical matters of every-day life, the cultivation of habits of cleanliness, propriety, self-management, self-reliance and the development and enlargement of a capacity for useful occupation. As promotive of these objects, pupils will receive

They are wanting in muscular and nervous power, the gait and voluntary movements are generally awkward and slow, and the special senses undeveloped or inactive. Physical training and physical development will, therefore, be essential to permanent mental improvement, and hence the importance of gymnastic and calisthenic exercises in treatment. The reciprocal influence of the body over the mind, and the mind over the body, must be carefully studied and applied. The dormant energies of the body must be roused to action by every possible means. The wayward muscles are to be taught to move in obedience to the dim spark of will that may exist, which will must be strengthened and developed. The very feeble power of attention must be cultivated and increased by the most attractive means. The affections must be nursed—the special senses trained and educated—vicious habits are to be corrected, and the idea of obedience and moral obligation must be planted and nourished.

Some feeble-minded youth who are merely backward and remain undeveloped from being misunderstood, neglected or abused, can, by special means, be brought out and reclaimed. Others can be arrested on their downward course, and made orderly, obedient, affectionate, docile and industrious; and nearly all can be materially improved in their general condition and habits. But, in order to secure the realization of these blessings to this afflicted class, they must have that special care, treatment and instruction which cannot be obtained in the family home, or in private medical practice, or by any of the ordinary methods of instruction, but only in some well-directed institution, arranged, furnished and organized for the accomplishment of these special objects."

The consensus of opinion being that the feeble-minded and the insane do not belong to the same class and should not be placed in the same institution, means that the defective youth and children of our state must be cared for independently in an institution or colony entirely their own. It is well recognized that the colony or cottage system is by far the best means of accomplishing the best results, for herein is combined the physical development as well as the mental training for we know both the physical and the mental need to be

such physical education, and such medical, moral and hygienic treatment as their peculiar and varied conditions demand.

Idiocy and mental imbecility depend upon some abnormal or imperfectly developed condition of the physical system—a condition in which the nervous organization is especially defective—preventing the harmonious and natural development of the mental powers.

Idiots and imbeciles are feeble in body as well as in mind. Taught and developed at the same time. Needed grounds and buildings for this work should not be expensive for such is not at all necessary, comfortable cottages is really all that is required, with land enough to allow of such labor as may be deemed best by those in charge. For a colony of this kind a competent Superintendent, who should be a physician, and if possible, one already trained in the work, with such teachers and attendants as in his judgment might be necessary. Quoting again from Dr. Fernald: "I have never found it possible to employ teachers already trained for teaching the feeble-minded. We have always employed bright young women with kindergarten or normal training, who have had some experience in primary teaching."

The cost of the buildings on the cottage plan for a plant such as the State of Georgia should have plainly but substantially built, should cost about \$15,000 dollars, independently of the land, which might be taken from that already owned by the State at Milledgeville. The per capita cost should not be over two hundred to two hundred and twenty-five dollars a year which, with the present number of seventy at the State Sanitarium, would cost the State to maintain them \$15,750 a year, a sum which seems too small to be denied the children for whom we are appealing. The subject with which we are dealing is a vital one, demanding careful attention and thought, for it deals not only with the present, but with generations yet to come. Allow me to quote from Dr. Kerlin, another able authority upon this line, whose statement, although made some years ago, is as true and applicable today as when first expressed:

"There is no field of political economy which can be worked to better advantage, for the diminution of crime, pau-

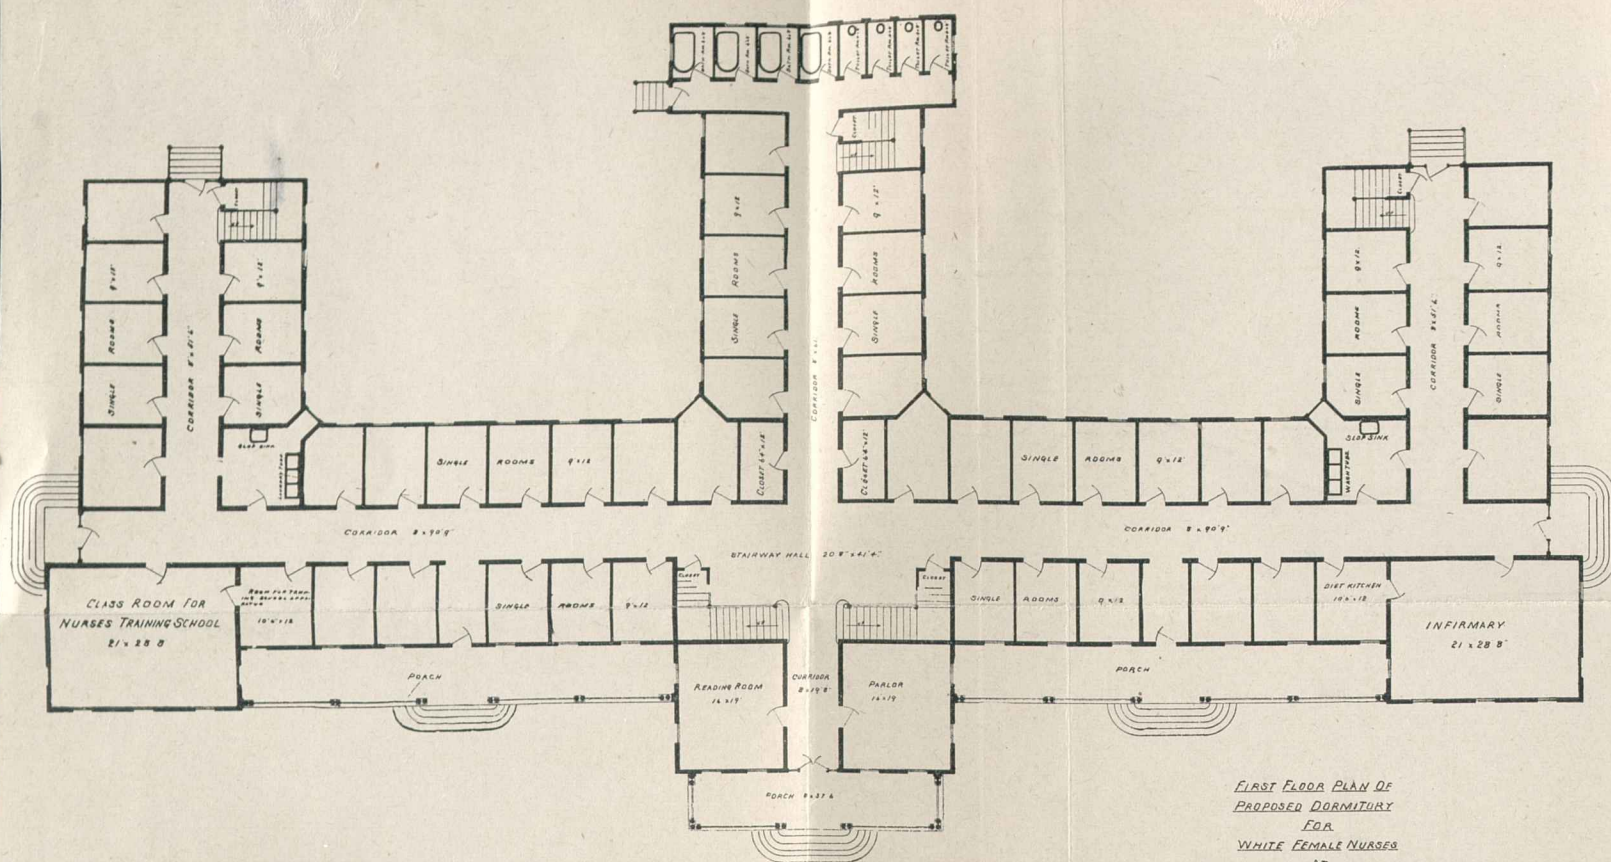

perism and insanity, than that of idiocy. The early recognition of some of its special and more dangerous forms should be followed by their withdrawal from unwholesome environments and their permanent sequestration before they are pronounced criminals and have, by the tuition of the slums, acquired a precocity that deceives even experts. Only a small percentage should ever be returned to the community, and then only under conditions that would preclude the probability of their assuming social relations under marriage, or becoming sowers of moral and physical disease under the garb of professional tramps and degraded prostitutes. How many of your criminals, inebriates and prostitutes are congenital imbeciles! How many of your insane are really feeble-minded or imbecile persons, wayward or neglected in their early training, and at last conveniently housed in hospitals, after having wrought mischief, entered social relations, reproduced their kind, antagonized experts and lawyers, puzzled philanthropists, and in every possible manner retaliated on their progenitors for their origin, and on the community for their misapprehension! How many of your incorrigible boys, lodged in the houses of refuge, to be half educated in letters and wholly unreached in morals, are sent into the community the moral idiots they were at the beginning, only more powerfully armed for mischief! And pauperism breeding other paupers, what is it but imbecility let free to do its mischief?"

The subject and its importance cannot be more plainly and truthfully stated than the quotation just used. It is to be hoped that all classes of citizens may become interested in this subject, in fact we believe now the matter is interesting some of the noble women of the state. To whom could we better appeal for that intelligent aid that should lead to a fruitful outcome in the establishment of a school for the feeble-minded in the State of Georgia than her medical profession? Lend us your aid my brothers and there can be no doubt as to the outcome.

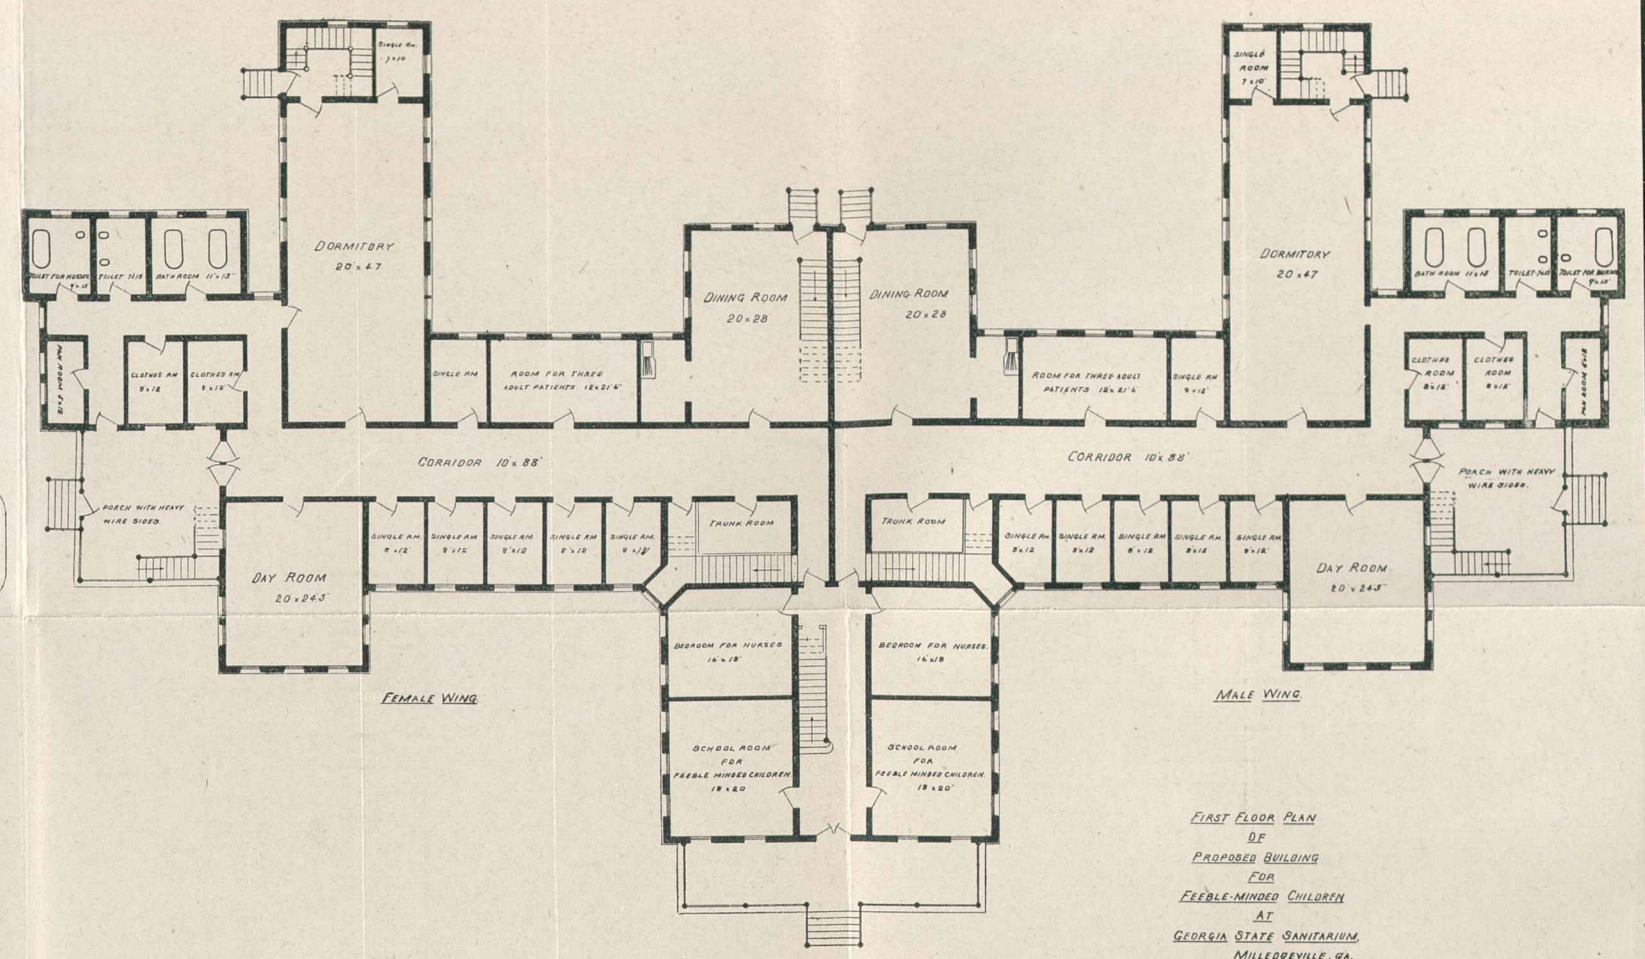

The clergy of the State, ever mindful of that which is good and elevating, and who appeal to the best element of mankind, we covet your help and assistance. Our brethren of the law, who come in intimate contact in the criminal

courts of the State with that which is known to be the direct outcome of the acts and crimes of the class we are trying to protect, we beg your assistance. In fact, there is not a citizen of this State who is interested in the cause of humanity and the upbuilding of the race but to whom we appeal and with the combined efforts of them all, the State of Georgia shall not be behind her sister states in caring for her defective children.

# **Sixty-eighth Annual Report**

of the

## **Board of Trustees of the Georgia State Sanitarium.**

---

Milledgeville, Ga., Jany. 1st, 1912.

To His Excellency Jno. M. Slaton, President of the Senate and Acting Governor.

Sir—The Board of Trustees of the Georgia State Sanitarium respectfully submits herewith for your consideration the Sixty-eighth Annual Report of the institution covering its conduct and management for the year ending Dec. 31, 1911. The annual report of the Superintendent to the Board, and of junior officers to him in turn, are attached as part of this report. They furnish full details of the year's work. Due credit is given to Superintendent Jones and his corps of loyal assistants for the excellence of this report. Every effort has been made by him and them to promote the well being and happiness of the stricken ones in their care, and to guard well the interests of the State. The various reports will show how well this has been done. From the Superintendent's report is condensed a few facts of general interest which now follow:

The number of patients now in the Sanitarium is 3419.

The new patients received during the year number 1064, being the largest year's reception in the history of the institution.

The total number of patients receiving treatment during the year was 4411, the daily average being 3383 which is a gain of 107 over 1910.

The percentage of patients discharged as restored or improved based on the number received during the year was 33 6-10%.

The cost of each patient to the State per day was \$0.384.

The recommendations with which this report is closed have been carefully considered by the Board, and in its judgment merit the attention of your Excellency and the General Assembly.

### Business and Finance.

The report of steward Lamar is the first to be made for an entire year under the new system of accounting, and presents an interesting statement of the business operations of the Sanitarium. Under this system all supplies bought which do not at once go into consumption are handled in theory as the property of the State, and do not reach the various expense accounts until issued for consumption. Under the system formerly in use they were charged at once into such account as soon as bought. It can readily be seen wherein the new gains in accuracy over the old. The products of the farm, gardens and dairy garnered by the Farm Steward in the successful operation of this department are taken into consumption at a fair valuation, and make a substantial contribution to the support of the Sanitarium. Such items are fully set out in the report of this officer. From the various Exhibits and Schedules making up the Steward's report is condensed the following statement for the year.

#### Operating Income for 1911.

State appropriations .....	\$465,992.00	
Surplus in cash and supplies from 1910 .....	49,974.55	
Farm products in consumption.....	51,969.50	
Farm products sold for cash.....	4,238.91	
Board of officers, etc.....	2,503.01	
Sundry sales .....	1,139.53	
Live stock increase.....	1,524.63	
	<hr/>	
Total income to account for.....		\$ 577,342.13

#### Operating Expenses for 1911.

Supplies consumed .....	\$302,051.53	
Salaries and wages.....	169,931.35	
Farm products consumed.....	36,779.80	
	<hr/>	
Total expense .....		\$ 508,762.68
	<hr/>	
Surplus of income over expense....		\$ 68,579.45

This surplus of income over expenses is held in the following forms:

Live stock, etc., .....	\$19,300.41
Farm products .....	15,189.70
Farm supplies .....	2,719.21
Subsistence supplies .....	17,777.43
Engineer's supplies .....	9,383.86
Fuel .....	8,509.97
Cash and cash items.....	20,655.81
Total .....	<hr/> \$93,536.39

Less reserved for deposits due patients	
accrued salaries and wages, for supplies	
etc., .....	\$24,956.94

leaving balance as above, \$68,579.45.

The excellent business management for the year is shown in the growth in the surplus of 1911 over that of 1910 of \$18,604.90.

The actual cost to the State for each patient was as follows: \$0.384 per day; \$2.69 per week; \$11.54 per month, and \$139.88 per year, in which are included all expenses connected with the management of the Sanitarium. The difference in the cash balances reported by the Steward and Treasurer is accounted for by outstanding vouchers and by funds from the State accounted for by the Steward in 1910 and by the Treasurer in this year's report.

### Work of the Medical Department

Chief interest in the Sanitarium centers naturally in the work of its Medical Department. Here the Board, Superintendent, Clinical Director and assistants meet in one common effort to advance its efficiency. Handicapped by lack of suitable equipment and funds a gratifying year's work has nevertheless been done. The admirable report of the Clinical Director sets this out in detail. It is of more than passing interest to note that in the routine work of this department all of the 1064 patients received during the year with but few

exceptions were passed before the Medical Staff once, many twice, and a few three times in order to arrive at a correct understanding of the condition and need of each individual case. As tending to promote the interest and efficiency of the Medical Staff monthly meetings are held in which papers bearing on the work in hand are read and discussed. It is the intention to preserve such papers for publication in bulletin form at the close of the year. The medical library is kept well supplied with valuable books of reference and scientific periodicals for the use of the officers. In their work these officers have shown commendable zeal, and the Board has nothing but praise for them. The people of the State may rest assured their afflicted ones are in conscientious hands, earnestly striving to help them.

Perhaps no need presses more sorely upon the medical officers than the lack of a suitably equipped hospital for the recent and acute cases of insanity in which alone rests a hope of recovery. So long as a hope of restoring such cases remains it is of vital importance they be kept separated from the hopeless, chronic insane less the depressing influence of such destroy all possibility of cure. The crowded condition of the Sanitarium precludes any possibility of adapting any one of the present buildings for this use even were it suitably located. Apart from the nobler motive such a building would appear a good investment to the State from the standpoint of economy since each patient the Sanitarium can discharge restored represents a substantial saving to it. The estimate of the Engineer of the cost of such building suitably furnished is \$135,000.00.

The Nurses' Training School which is under the care of the Medical Department is proving a valuable adjunct to its work. The first class will graduate from it in 1912. It has served to attract to the employ of the Sanitarium for the first time in years a sufficient number of white female nurses for its work. In this connection the Board would once again call your Excellency's attention to the importance of making provision for the comfort and well being of these faithful women. They are now without place of recreation when off duty in which to gather for social pleasure. They must obtain rest

and sleep on the wards in which they are employed, and it may readily be appreciated that there are frequent times when either is difficult to obtain. The Sanitarium equipment should include a Nurses' Hall for their use as a home. It should be supplied with a sufficient number of bed rooms, bath rooms, etc., and such sitting and reading rooms as are required. It is estimated that such a hall can be built for \$40,000.00. Better service might reasonably be expected when this need is supplied.

Plans are under way to be carried into execution as soon as the means are available looking to furnishing other means of useful employment to such of the patients as are capable of taking it. The mental diversion given by such employment is recognized as a valuable agent in the treatment of insanity.

The attention of your Excellency is again directed to the large number of senile imbeciles, harmless paralytics and harmless idiots found among the patients committed to the Sanitarium. Neither of these classes can be benefitted by Sanitarium treatment, and they would appear to be proper subjects for county care.

The Board deems the time at hand when for the better protection of society and State a sterilization law should be enacted by the General Assembly. It should apply to certain types of the insane, defectives, epileptics and criminals, its purpose being to prevent the procreation of their kind. The Board is advised that the operation involved entails no mutilation, and is practically painless. The value of such a law has led to its adoption by several of the States in which its execution is placed in the hands of a body of scientific men. The Sanitarium might well be authorized to apply such a law to such patients as may be discharged from its custody but who in the judgment of its officers, having due regard to the laws of heredity, should be prevented from having off-spring to become in their turn a burden to society and the State.

#### **Sane Epileptics and Feebleminded Children.**

The laws of the State permit the commitment to the Sanitarium of epileptics who are not insane, and of feeble-

minded children. It is eminently right that both should have the protecting arm of the State about them, but they ought not to be placed in her hospital for the insane. It needs no argument to show that such a hospital is not the place for a sane person even though afflicted with epilepsy, and just as little is it a suitable place for the feeble-minded child. The Sanitarium has no separate or special equipment for their accommodation, and the sane epileptic must associate with the insane to the detriment of both.

The feeble-minded child can be fed, clothed, housed and given medical treatment when sick, but this is all, and for him all hope departs when he enters. These children constitute the saddest of the many sad spectacles to be seen within the walls of the Sanitarium, and their pathetic condition wrings the heart of every humane visitor.

For the proper care and treatment of the epileptic the medical world appears agreed that the farm colony where plenty of hard work in the air and sunshine may be had supplies the ideal equipment. The initial investment for such a colony need not be large. Simple farm buildings for both races and sexes should be provided together with a home for the Superintendent and the necessary farm buildings. The self-helpful labor of the inmates will contribute both to their health and support. The necessity upon the State of making some such provision for these sorely afflicted ones is strongly evident. No disease is so repugnant in its outward manifestations as epilepsy, and to no one is the door of home, school or church sooner closed. Unless given proper care and treatment in the incipiency of the disease it progresses rapidly towards insanity, and a burden is thus placed on the State for the remainder of their lives.

For the feeble-minded children not only a home but a school is required in which they may not only receive physical care but such mental and manual training as they may be capable of receiving. As this training progresses useful employment can be found for them, and they made in this way to contribute to their support. It does not appear that expensive buildings are required to begin such a home and school, and no doubt there are communities that would donate

the land for such an institution if located in their midst. The duty of the State to make suitable provision for these defective is not less strong than is her duty to the blind, deaf and dumb. The best ends of society are certainly served by such provision, and it should be promptly made.

The law governing the Sanitarium should be amended so as to prohibit the further commitment of these classes to it.

### **Convict and Criminal Insane.**

In 1904 the General Assembly enacted a law placing the care and treatment of the convict insane in the hands of the Prison Commission, the Superintendent of the Sanitarium, being directed to turn over to the Prison Commission all patients of this class then in the Sanitarium as soon as the required provisions were made for them. These provisions have never been made, or if made the Superintendent has never been notified. The attention of your Excellency is called to this failure of the Prison Commission to comply with the law, and so relieve the Sanitarium of the care of such patients.

In connection with the foregoing your attention is called to the number of criminal insane now in the Sanitarium. By criminal insane is meant those cases which by plea of and trial for lunacy escape a trial for crime by commitment to the Sanitarium until restored. The Sanitarium is not a prison, and has no means of securely confining such cases so that they may be prevented from escaping. It not infrequently happens that insanity is feigned with the express purpose of escaping from the Sanitarium. It would appear wise to place such cases in the custody of the Prison Commission, requiring it to make the same provisions for them as for the convict insane. The injury and injustice of forcing the innocent insane in the Sanitarium into association with convicts and criminals of debased minds and instincts is so real as to demand quick remedy.

### **Notice of Trial for Lunacy.**

The law now requires ten days notice to be given the three nearest adult relatives of the person to be tried for

lunacy before such trial can be held, but in consequence many such persons are placed in jail, and held there as common felons until the required time has expired. The report of the Superintendent again calls attention to the hardship imposed by this law, and urges that it be so amended as to allow the notice of the trial when approved by the Ordinary to be waived by the relatives, due record being made of such waiver. In recent and acute cases of insanity especially this jail confinement is greatly to be deplored.

### **Crowded Negro Building.**

The report of the Superintendent again calls attention to the necessity of providing more room for negro patients. The present buildings contain 1,012 patients, and are crowded to the danger line. Their sanitary condition thus crowded can readily be surmised. Under the direction of the Board the Engineer has made careful study, and it is his opinion that more room can be most economically provided by an annex to the larger of the two buildings now used for this purpose since it can be served from the present kitchen and heating plant. In this opinion the Board fully concurs. It also believes that such an annex when built should carry a chapel or amusement hall for the use of these patients. No such provision has heretofore been made for them, and they are entitled to whatever happiness or comfort such a possession can give them. The Engineer estimates that the cost of such an annex will be \$95,000.00.

### **Brass Band for Patients.**

The officers of the Sanitarium asked and received the sanction of the Board to an effort to raise a sufficient sum of money by popular subscription for the purchase of the needed instruments and the employment of a competent instructor with which to equip a brass band to be organized among the attendants. The response to their unselfish appeal has been generous, and within a short time it is expected to have the band under full headway. Just what its music

will mean to the patients whose happiness and pleasure is sought only those with some knowledge of institution life can fully know. The Board takes this occasion to express its warmest appreciation of the interest thus manifested by the officers, and by those contributing to the fund.

### Engineer's Report.

The upkeep of the great physical plant of the Sanitarium is in the hands of the Engineer, and his report indicates an unusually busy year in that department. The report of the Superintendent calls attention to many needed repairs which the Board has thus far been unable to reach. The two additional tubercular wards will soon be completed, and fully occupied. Boilers with which to replace those condemned in the Negro Building have been bought, and are being installed. Materials with which to enlarge the negro kitchen have been bought, and this sorely needed improvement will soon be under way. This kitchen now feeds about 1,400 people, and in its present size is utterly inadequate to meet the very heavy demands on it; hence, this enlargement.

Materials with which to build a long needed storage reservoir for water have been bought, but work on it has not yet begun owing to the pressure of other matters on the Engineer. The demand on the white laundry has so far outgrown its capacity that its early enlargement has become a vital necessity, and for this work more than \$6,000.00 will be required.

The operating room in the Powell Building has been rebuilt, and is now in splendid condition for its purposes.

Fire drills are held at regular intervals under the direction of the Engineer. The outside fire escapes of the Kirker-Bender type would add greatly to the safety of the inmates in case of fire. All fire escapes are now on the inside of the buildings, and while apparently ample greater safety would be had by the addition of outside ones.

### Death of Dr. J. M. Whitaker.

The Board regrets to report the death of Dr. J. M. Whitaker, for many years the First Assistant Physician of the

Sanitarium. His ability and devotion to his work made his services of great value to the institution. A memorial service was held by the Board in his honor.

### Planning for the Future.

In the past 20 years the number of patients in the Sanitarium has grown from 1,665 to 3,419. At this ratio of increase the future size of the Sanitarium can readily be seen. It is already crowded with negro patients far beyond its accommodations for them, and more room must be provided at once. The accommodations for white female patients will soon be taxed to their utmost capacity making more room for them an early necessity. In view of these facts it would appear the part of wisdom to begin planning now for the future. In 1892 the Board recommended the establishment by the State of a separate hospital for the negro insane to be located elsewhere in the State in order to relieve the congested condition of the Sanitarium. If this step could now be carried into effect the room here would be ample for some years to come. The importance of this matter is so plain that the Board earnestly hopes it will have prompt and serious consideration. Several years at best will be required to carry such a plan into execution, and in the meantime the need for more room for patients in the Sanitarium is already become urgent.

### Recommendations.

In the discharge of the duty resting upon it the Board makes the following recommendations:

As to Laws—

1st. Amended so as to prohibit the commitment to the Sanitarium of epileptics not insane, feeble-minded children, senile imbeciles and harmless paralytics.

2nd. Amended so that the three nearest adult relatives may, with the approval of the Ordinary,

waive the present required ten days' notice of trial for lunacy.

3rd. Amended so that any person who shall abandon a patient on the Sanitarium Grounds without the consent of the Superintendent shall be arrested and tried in the Courts of Baldwin County having jurisdiction in criminal cases, and on conviction be punished as for a misdemeanor.

4th. Amended so that the Board may have the right to procure the services of an attorney at law as a legal adviser as occasion may require.

5th. Amended so as to change the name of the Georgia State Sanitarium to the Georgia State Hospital for the Insane.

6th. Amended so that nine members shall constitute the Board of Trustees of the Sanitarium; that at the first appointment three shall be appointed for two years, three for four years, and three for six years; and thereafter three shall be appointed every two years.

7th. The enactment of a sterilization law modeled after recently enacted similar laws in New Jersey, Indiana and other states.

8th. Amended so as to abolish the office of Treasurer, and to authorize the Board of Trustees with the approval of the Governor, to nominate a Bank of Deposit as the custodian of the Sanitarium funds.

9th. Amended so as to require the Prison Commission to assume the care and treatment of persons under trial for the commission of crime who by plea and trial for lunacy escape such trial until restored to sound mind again.

As to Appropriations—

1st. The appropriation of the sum of \$95,000 for the building of an annex to the negro building.

2nd. The appropriation of the sum of \$40,000 to build a Nurses' Hall.

3rd. The appropriation of the sum of \$135,000 to build and furnish a hospital for the recent and acute insane.

4th. The appropriation of the sum of \$6,000 for enlargement of laundry.

#### In Conclusion.

The thanks of the Board are due and now tendered your Excellency for the consideration shown in the discharge of its duties, and to the General Assembly for its increased liberality in the appropriations for 1912 and 1913.

Respectfully submitted,

RICHARD JOHNSON,	JOHN T. BRANTLEY,
	President.
Secretary.	

### Report of Superintendent.

For the Year Beginning Jan. 1st 1911, and Ending Dec. 31st,  
1911.

---

Georgia State Sanitarium, Jan. 1, 1912.

To the Honorable Board Trustees, Georgia State Sanitarium:

Gentlemen—I respectfully submit for your official consideration the sixty-eighth annual report of this institution for the year ending Dec. 31, 1911.

On Jan. 1, 1911, there were white patients on hand 2,292 and colored 1,055. There have been received since 646 whites and 418 colored, making a total reception of 1,064. There have been discharged, removed, eloped and died 992, leaving in the institution 3,419 on Jan. 1, 1912, of whom there were 132 whites and 41 colored on furlough not discharged.

The average number of patients under treatment during the year was 3,383, while the total number receiving treatment was 4,411. It will be seen that the average number receiving treatment was 209 more than last year.

Our net increase for the year is 72. Our per capita has been as follows:

Annual \$139.88; monthly \$11.65; weekly \$2.69; daily .3840; average monthly expenses for institution \$38,976.60. Our appropriation for the year 1911 was \$465,992.00. We have a balance on hand after salaries and wages for the month of December shall have been paid, which will be done on the 5th and 12th of January, respectively, of \$262.90. You will observe that our per capita was slightly above that of last year, owing to increased cost of living.

Endeavoring to live within our appropriation, and have no deficit, we were unable to make the repairs and improve-

ments so much needed. Some of this work has been postponed so long until it cannot be put off any longer. Take the negro kitchen for instance, which was built when there were not more than one-third the number of patients we now have to cook for. The size is inadequate; the floor is worn out; the cooking utensils too small and worn; the boilers for cooking and heating the building have been in use so long that the insurance companies consider them unsafe and refuse to insure them any longer. I am glad to say you have ordered this work done, and we are now getting the material on the ground. We have long been in need of more storage room for water, as the storage capacity is very small; only enough to last a few hours in case the water works should become disabled. It is a pressing necessity. The Legislature has been asked repeatedly for an extra appropriation to do this work, but it has never been made. I am glad to say that this work has also been ordered to be done and a good quantity of the material is now on hand.

I feel it my duty to mention other improvements that are very much needed. It will be a reiteration of our report of last year, but it should be agitated until the State sees its duty toward this institution and makes the necessary appropriations to carry on the work here as it should be done.

In the white laundry some of the washing machines have been in use for thirty years or more. They were installed when the institution had less than one thousand inmates. They are too small for the work and almost useless—so often getting out of order.

Besides the new machines needed other improvements such as additions to the boiler room, a new brick chimney, new steam boiler, ironers, hydro-extractors, etc., are very much needed. The estimated cost is \$6,240.00.

We also mentioned the necessity of enlarging the general storehouse, estimated cost \$2,651.00; concrete floor in 134 bath rooms, \$7,885.00; wood ceiling in place of old plaster that is rotten and constantly falling, thereby endangering the lives of the patients, in the Powell Building, back detached buildings and parts of the negro building, \$9,005.00; finishing one wing of the Twin Building, \$8,000.00; additions to

the negro building to accommodate 300 patients; this is a pressing need, \$100,000.00; erection and equipment of a building for the acute insane; additions, or new buildings, for the children, \$35,000.00; a nurses' hall, etc.

If the institution is expected to do first class work and keep up with the progress of the times it will be necessary for these improvements to be made. They cannot be made out of the present appropriation. Our appropriation for this and next year will be a few cents per capita more than we had last year, but with the increase in our pay roll, amounting to twenty or more thousand dollars, and the increased number of patients to be cared for will require economy and strict business principles to enable us to carry on the work and not have a deficit. To increase the pay roll is a matter of necessity. For the last few years we have been greatly embarrassed most of the time for the lack of a sufficient number of nurses to properly attend the sick. The character of the work and the meagre pay would not hold the help we could get. This has been more noticeable in the white female department than anywhere else. At times we have had as many as thirty vacancies in this department alone, frequently having as many as eight or ten notices to quit at one time. I am glad to say that nearly all vacancies are now filled and the work is moving along very satisfactorily.

### Training School.

While on the subject of nurses I wish to say that I am inclined to the opinion that the training school has been a great help to us in securing more help. We now have a senior and a junior class, the former numbering 10 and the latter 15. Great interest is being taken by both classes, and we have some good material from which to make good nurses. Some of them have been with the institution so long that we will greatly regret to give them up if they decide to leave after graduation. Miss A. V. Cross, who has been connected with the institution as superintendent of nurses (and training them as best she could with the opportunities afforded for the last 15 years), was the leading spirit in organizing the train-

ing school, and it was with great regret that we had to lose her valued services. She was married to Dr. N. P. Walker last June and resigned her position, but kindly consented to serve until we could get someone else to fill the vacancy. Before school opened its second term last October we were fortunate enough to secure the services of Miss Mae Miesse, of Columbus, Ohio, as superintendent of nurses. She came to us very highly recommended, and her services have been very satisfactory. We have also secured Miss Sara May as assistant to Miss Miesse. She is from the same city and state, and renders good service in the surgical and sick ward.

Last summer Miss Alma Snipes, one of the faithful few, who has been nurse and assistant to the matron for quite a number of years, was sent to Philadelphia to take a course in massage and hydrotherapy. She finished the course within three months, doing credit to herself and our institution in making the second best mark in the graduating class. She is still a member of the senior class in our training school, but is rendering valuable service in giving treatments to patients needing massage and hydrotherapy and instructing other members of the class in this line of work. While we are putting in some equipment for continuous baths, it would be hard to estimate the good that would be derived from the installation of a full hydrotherapeutic outfit.

Miss Alice Vaughn was sent to Chicago, where she took a six-weeks' course in handicraft, calisthenics, games, etc., and is now equipped for instructing the patients in this line of work. She has been engaged in this since returning until the school opened in October, when she had to give it up on account of her studies. We hope this work, entertainment, etc., will be resumed as soon as school closes. In every annual report we have made we have stressed the importance of employment and entertainment for the mentally afflicted. "Being subject to morbid thoughts and self-introspection they are sure to deteriorate in both body and mind if left in constant idleness."

As mentioned in previous reports quite a number of patients are employed in the garden, in the kitchen, laundry, dairy, grading, sewing and on the farm. If we had industrial

shops a good many more could be employed with profit, not only to themselves, but the institution.

Not as much for amusements and entertainments has been done as would be profitable. The weekly dances are kept up, some baseball during the spring and summer; we have had some musicals, and President Reynolds of the Georgia Military College of Milledgeville, with some local talent gave us a very enjoyable show, "Belle of Kentucky." This kindness was highly appreciated by patients and officers. A Victor Victrola has recently been bought with a number of records, which no doubt will be greatly enjoyed by the patients. The officers of the institution have formed a band association, with the approval of the Board, and are soliciting contributions from the public with which to buy instruments and pay an instructor, that we may have a band of music for entertainments. Subscriptions have been right liberal, and we hope the project will be successful; if so, it will no doubt be the means of cheering many a melancholy spirit, and a source of great pleasure to all.

The reports of the officers at the head of the different departments are so complete, and show so thoroughly what has been done in these different lines, I feel that it is hardly necessary for me to mention them save to call your attention to them.

The Clinical Director's report will give full details of the workings of the Medical Department. In some of his monthly reports your attention has been called to the progress that has been made within the last two years.

I cannot commend too highly the work that he and the Medical Staff are doing. Besides the clinics and staff meetings daily, in which every patient received in the Sanitarium is thoroughly examined and discussed, an association has been formed, and every member of the staff alphabetically will prepare a paper to be read and discussed at the monthly meetings, and at the close of the year we hope to publish these papers in bulletin form.

The Steward's report shows in detail the receipts and disbursements of all funds. I am sure this department has been conducted in a business-like manner and with a strict view

to economy. Supplies are bought quarterly under competitive bids, the lowest bidder getting the contract, quality being considered. These purchases are made by your Executive Committee, and they can testify as to the wisdom of buying goods in this manner.

The Farm Steward's report, no doubt, will be one of much interest to you. It is not necessary for me to go into detail as to the good work done in this department, as the report shows for itself. The seasons were not favorable for gardening, being too dry in spring and summer, but we had some vegetables most of the time. It seemed too dry on the farm to make corn, but with good cultivation more was gathered than was ever gathered in any previous year. The oat crop and cotton were all that could be hoped for. This farm, as you know, is known as the "Colony," and is cultivated by colored male patients principally, having about one hired man to every ten patients to work with them and take care of them.

The water supply at the Colony came so near failing during the long dry weather in the latter part of the summer and fall of the year 1910, it was determined to raise the dam at the pond two feet and nine inches, hoping thereby to get the pond full and have enough to carry us through the summer of this year, but the weather continued so dry that the pond did not fill, and by the middle of the summer was so low that it failed to work the automatic ram. The spring some distance above the pond, which was its main dependence during dry weather, failed to reach the pond with its stream and the water that remained, having no inlet, became stagnant and unfit for use. By developing this spring we made a reservoir large enough to supply our needs, and by connecting it with the main line of pipes and putting a pump into it we had no further trouble. It is excellent water, and we feel safe for the future as this spring was never known to fail. However, since the fall rains have been so abundant the pond has filled and we have a bountiful supply of excellent water without the expense of pumping from the spring.

At this Colony we have a grist mill run by a twenty-horse gasoline engine. It makes splendid meal, and for the last three months we have not bought a bushel of meal for the

institution, making all that we have used from the corn grown on the farm. We hope to be able to keep the mill going for the next three months, and perhaps longer if we have good prospects for a good oat and corn crop the coming year. Since the farm was established we have never had to buy any corn or forage for the stock, and by improved methods and better fertilization, with good seasons, we hope soon to produce corn enough to not only feed all the stock of the institution, but to supply all the meal we need.

We also have a cannery. Last year the fruit crop was small, and not having any in excess of what could be readily eaten while fresh none was canned, but a nice supply of tomatoes were put up—about four thousand 3-pound and three thousand 10-pound cans.

The Engineer's report will show all improvements, repairs, etc. Were it not that he is so very modest and timid I would say some complimentary things about our Engineer, but he needs no introduction to you gentlemen who know him and his worth to the institution. He is not only a civil engineer of the first quality, but an architect and builder, electrician and anything else that you want him to be.

The Matron's report will show what has been done in the way of cutting and making garments, mending, etc.

Miss Miesse will make report on the training school from Oct. 1st, at which time her services commenced.

The report of the Pathologist will necessarily be a limited one as he has only been at work for a few months of the latter part of the year.

Religious services were conducted by Rev. D. W. Brannen until Mr. J. F. Singleton, the new pastor of the Baptist church, was elected to fill the unexpired term of Rev. Lamar Sims, who resigned to accept a call to the Albany Baptist church. All of the dead who were buried here were given a Christian burial by the chaplain, and preaching was had regularly every Sunday afternoon in the chapel. Rev. Elam Dempsey of the Methodist church was elected chaplain at the October elections for one year, as it is the custom to alternate every year with the different denominations. These religious services

are very much appreciated by our people, and I am sure they do a great and lasting good.

The library is looked after by Mr. D. E. Kibbee in the Male Convalescent Building, and is a source of great pleasure to a great number of the inmates. I take this method of publicly acknowledging thanks to the many friends who have contributed magazines, books and daily and weekly newspapers.

I feel like I would be derelict in my duty if I did not again urge you to recommend an amendment to the law which requires ten days' notice to be given to three of the nearest adult relatives before people can be committed here. No one knows of the distress all over the State caused so frequently by this ten days' delay, unless one could be here and know of the many urgent pleas to allow the relatives to waive this notice that patients who are raving, violent and dangerous may at once be received. Frequently they have to guard such cases day and night and keep them tied down or send them to jail to keep them from destroying themselves or others. This is inhumane. Relatives should be allowed to waive this ten days' notice and send them immediately to the institution, where they can be properly cared for.

Another very important recommendation made in your last report was to amend the law so as to prohibit the commitment of senile harmless imbeciles and helpless paralytics. To this might be added feeble-minded children and harmless idiots. These classes are rapidly filling up the institution and they cannot possibly be benefited by any treatment they can get here.

If this practice is kept up many more buildings will have to be erected on these grounds and prove a great burden on the State.

The law provides that if a patient is out of the institution either by parole, elopement or discharge, over ninety days, a new commitment becomes necessary before one can be returned. Frequently this is too short a time to determine whether one can be kept out or not. I should like to see this amended so as to allow one six months' trial before having to be recommitted, as new commitments mean more expense to the counties or relatives. If this could be done we would be enabled to parole more without fear of this extra expense.

As you know, Dr. J. M. Whitaker, who had been first assistant physician for nearly thirty years, gave up his work on account of ill health and died Aug. 11, 1911. He had given the best work of his life to this institution, and it sustained a great loss when his health failed. I have heard the late lamented superintendent, Dr. T. O. Powell, say that he never saw a better first assistant physician than Dr. Whitaker. He was ever kind and gentle toward his patients and saw that they were not mistreated or imposed upon; and his loyalty to the institution was unquestioned.

Dr. J. W. Mobley has been elected first assistant physician.

Dr. R. C. Swint resigned last January to accept a position with Dr. Rawlings in Sandersville, but after a few months' stay there decided he loved our Sanitarium better and came back to us.

Dr. L. P. Longino resigned on the first of June to accept a very flattering partnership with his uncle in Atlanta, and he, too, returned to his first love.

Drs. J. I. Garrard and W. F. Tanner stood satisfactory examinations before Drs. Thomas R. Wright, T. M. Hall and H. D. Allen, and were elected to the staff in October. Dr. P. H. Weeks, one of the internes appointed by the Augusta College, stood examination at the same time, and is now eligible for a position on the staff, should a vacancy occur.

Dr. Kelly, selected by the Atlanta College of Physicians and Surgeons, served as interne from June to January, and resigned to go to the Macon Hospital. Dr. A. R. Rozar was appointed by the Atlanta School of Medicine to an internship under resolution of your Board offering an internship to the three Medical Schools to be selected from their honor rolls, but failed to accept.

We were without a pathologist from January to October, but finally secured the services of Dr. S. S. Hindman, who has been connected with the government at Washington, D. C., in this line of work.

These, I believe, are all the changes that have been made, all the other old officers being re-elected in October.

In closing I desire to express my indebtedness to all of the officers and employees for their co-operation and faithful service to duty without which the affairs of the institution could not successfully be conducted; and to thank you gentlemen for your never failing interest and wise administration.

Very respectfully submitted,

L. M. JONES,  
Superintendent.

## Report of the Clinical Director.

---

Dr. L. M. Jones, Supt.

Dear Sir—I beg to offer the following report of the Medical Department of the Sanitarium for the year ending December 31st, 1911:

### Admissions.

During the past year 1,064 patients were admitted, this being the largest number received in any one year since the institution was established, and shows an increase of 68 over the admissions for 1910. Of this number 165 had formerly been committed to this hospital or to others of like character. There seems to have been an actual increase of insanity during the past few years, as well as an increase in numbers due to the growing population of the State. As shown by the census report for 1903 there was, in Georgia, one insane person to every 835 of the general population, while at the close of the present year there was in this institution alone, one insane person for every 733 of the general population of the State.

As will be seen by table No. III only 25 of the number admitted were foreign born.

Among the admissions were an unusually large number who had committed criminal acts and were sent to the Sanitarium by order of court, to be returned to their respective counties when restored. These individuals were under indictment for the following crimes:

Assault with intent to murder.....	1
Murder .....	6
Assault with intent to rape.....	1
Rape .....	2
Assault .....	3
Burglary .....	3

Cheating and swindling.....	1
Issuing worthless checks .....	1
Horse stealing .....	1
Embezzlement .....	1
Misdemeanor .....	2
Theft .....	1

Of the number there were, white males 11, negro males 10, negro females 2.

Five of these individuals were not insane.

The following forms of insanity were noted in the remaining cases:

Constitutional inferiority .....	5
Constitutional psychopathic state.....	3
Epilepsy .....	2
Imbecility .....	1
Imbecility with epilepsy.....	1
Dementia praecox .....	3
Manic-depressive psychosis .....	1
Drug psychosis .....	1
Unclassified .....	1

### Staff Meetings.

Since the inauguration of Staff Meetings, two years ago, it has been the custom to present each patient for diagnosis as soon after examination as practicable. If the diagnosis was unquestioned, the patient was not presented for a second time unless the course of the psychosis manifested some unusual phase, but the cases in which there existed doubt as to its accuracy were brought before the Staff for a second time after they had been under observation for two or three months. Especially obscure cases were presented for a third time.

The time allowed for presentation of these patients is necessarily limited, and discussion of doubtful cases cannot be gone into thoroughly, owing to the large number admitted. Consequently it has been thought best to present no doubtful case until it has been under observation for several weeks, that advantage may be taken of the additional information so obtained.

During the past year 1,033 of the 1,064 patients admitted

were brought before the Staff. The remaining 31 died or were removed before this could be done. Many of the number were presented twice, and a few three times. In the latter group there were several criminals in regard to whose insanity some doubt existed, while others were brought up for consideration of the advisability of their discharge.

The benefit derived from these meetings by both the physicians and the patients can only be appreciated by those who have some knowledge of such conferences. They result in increased interest in insanity abstractly, and in a more intelligent understanding of the individual patient.

### Anamneses.

As mentioned in our last report, great difficulty is experienced in securing reliable information in regard to the family and personal history of our patients. The history blanks sent by the county ordinaries are carelessly filled out, the data being usually inaccurate and frequently misleading. In an attempt to remedy this matter, rather elaborate forms are sent to the relatives whom we have been unable to see personally. These forms, when properly filled out, give us quite a good part of the information desired, but even these requests for information are frequently ignored and are seldom carefully complied with. The assigned causes of insanity, obtained from relatives or from acquaintances, are often misleading and can rarely be accepted with any degree of confidence, therefore we are, in the majority of cases, left without reliable information as to the factors bringing about the psychosis. This inability to secure the facts desired is, in part, responsible for the unsatisfactory table No. X in which are given the etiological factors other than heredity.

### Discharges.

Comparatively few of our patients are discharged as restored. The insistence of relatives is responsible in great part for the discharge of many patients before recovery, while the applications for admission are pressing and room is needed to

accommodate acute cases and to relieve the jails of their care. Whenever a convalescent patient is not considered dangerous to himself or to others and it appears that a return to his home will not prove harmful, he is allowed to leave the institution in custody of his relatives on a furlough of ninety days, if they desire to remove him. In many cases recovery is completed before the expiration of the furlough, but no report is made to the institution, therefore the patient's condition on discharge is recorded as noted at the time of furlough.

During the past year the condition of patients discharged is given as follows:

Restored .....	79
Improved .....	279
Unimproved .....	83
Not insane .....	9
<hr/>	
Total.....	450

The percentage of those restored and improved, based on the year's admissions, is 33.6, that of the restored alone being 7.4.

Those discharged as restored and improved, based on the whole number under treatment, is 8.0%.

As in past years quite a large number of those admitted suffered from psychoses from which recovery could not be hoped for. This condition is more noticeable in Georgia than in many other states as here no provision is made for the epileptic or the feeble-minded while many of the counties do not maintain almshouses in which a number of the harmless senile patients might be kept. Our percentage of recovery is much reduced by reason of the large number of such cases, 54.4% of our admissions for the year being afflicted with incurable psychoses, of which might be mentioned—

Senile psychoses .....	123
General paralysis .....	69
Psychosis with nervous or brain disease.....	44
Dementia praecox .....	146
Paranoic condition .....	15
Epilepsy .....	80

Constitutional inferiority .....	35
Imbecility and idiocy .....	67
Total.....	579

### Physical Diseases.

During the past twelve months 2,772 cases of acute illness were reported. This does not include all such cases treated, as many ill patients reported during the previous year were still under treatment, while report of many cases was not made through oversight or because of their trivial or transitory character it was not considered to be necessary.

An epidemic of measles occurred during the early part of the year. No cases developed in the negroes and only four white males were affected.

Later an epidemic of parotitis was confined almost exclusively to the white males and the negro females, only one white female and two negro males being affected. Eleven cases of typhoid fever were reported, five of whom were attendants.

There were recorded during the year 157 cases of tuberculosis. Of these cases 109 or 69.4% gave evidence of the disease on admission, while in 38 additional cases tuberculosis was suspected though the symptoms were not clear enough to admit of a positive diagnosis being made.

Of the total admissions, 152 patients acknowledged the presence of tuberculosis in one or more of their immediate relatives, 311 individuals being affected. In 285 instances a tubercular heredity was denied. In the cases, therefore, of whom it was possible to obtain a family history, tuberculosis was noted in 34.7%. All of the seven pavilions for tubercular patients are filled, while the one for white males cannot accommodate all the cases occurring in that department. The large pavilion for white females now in process of erection should provide all the room needed for some years.

The year has shown no diminution in the number of cases of pellagra, 169 having been reported. Of this number 75, or about 45%, gave evidence of that disease on admission, and 26 additional cases appeared within sixty days after entering the Sanitarium.

On initial examination valvular disease of the heart was found in 164 patients, while other cardiac disease was discovered in 19 additional cases. We find, therefore, the presence of cardiac disease in 17.2% of all admissions.

Arteriosclerosis was noted in 137 cases.

### Surgery.

By reference to table No. XVI it will be seen that in addition to 476 minor surgical procedures, 43 major operations and 87 operations of less gravity were performed.

Geneal anaesthesia was required in 96 instances.

All of these operations were performed by the members of the Staff, unassisted by surgeons from without the institution, except in one instance in which a trachelorrhaphy with suspension of the uterus was done by Dr. Wright of the Board of Trustees.

The results achieved compare favorably with those of general hospitals and should be gratifying to everyone connected with the institution, and especially so, as many of the patients did not co-operate in the after treatment, some being in so excited a condition as to necessitate the use of force to keep them in bed, while others removed dressings and left their beds whenever the vigilance of the nurses was for any reason temporarily relaxed.

One white female died on the third day following a double oophorectomy. On autopsy an intestinal paralysis was found.

One white male between 70 and 80 years of age was operated upon for strangulated hernia. Some days afterward a periurethral abscess developed. Several weeks later an acute cystitis appeared, causing his death six weeks after the operation.

With these two exceptions recovery followed every operation.

### Deaths.

As will be seen by table No. XVII, quite a large number of deaths have occurred during the year. Many of the patients committed to the institution have some serious organic

disease, and are only brought to us in its latter stages, or when their condition becomes so precarious that they can no longer be properly cared for at home. Occasionally patients are brought to the Sanitarium practically moribund and die within a few hours. Of the deaths reported 51.2% occurred in those who had been in the institution for less than twelve months, and of this number 29.5% died within thirty days after their admission.

Two patients, one white male and one white female, committed suicide by hanging. Both unfortunate occurrences took place at meal time while the patients were alone in their rooms.

The largest number of deaths is attributed to pellagra, this disease being responsible for 106 deaths or 19.5% of the whole number.

To tuberculosis is attributed 19% of the deaths.

The cause of death in 17 instances was undetermined. The greater number occurred suddenly without previous illness, others died shortly after entering the institution and before thorough examination could be made. In all of these cases autopsy was refused.

### Training School.

Our Training School for nurses has entered upon its second year of successful operation, under the supervision of Miss Mae Miesse, Superintendent of Nurses. The Senior class numbers 10; the Junior class 16. All pupils of the school seem to take an enthusiastic interest in the work, and as a result, the service is better than it has been at any time in the past. The establishment of the school has attracted notice throughout the State, consequently we have for the first time in several years a full nursing force, and applications for positions are still being received.

Each member of the Medical Staff lectures to one of the classes, and the pupils are receiving as high a grade of instruction as is given in the school of any similar hospital.

The accompanying tables show the diagnostic grouping of the patients received and the percentatge of each group

based upon the whole number of admissions, as well as that by race based upon their respective admissions:

TABLE I.

### Traumatic Psychoses.

This group is composed of only two cases, both white males, neither of whom had a former hospital residence. No family history was obtainable in either case. The psychoses followed severe head injury, and was manifested in one case as post-traumatic constitution and in the other as traumatic defect condition.

### Senile Psychoses.

The number of cases assigned to this group is somewhat in excess of that for the year 1910, being 123 or 11.5% of the whole number received. Only four of these patients had a former hospital residence, all four having been discharged from this institution as "improved." No family history bearing on the presence or absence of nervous or mental diseases could

be secured in 62 instances. In 28 cases such history was acknowledged; in 33 it was denied. Where the facts could be obtained it was found that 45.9% of the cases showed the presence of such etiological factors.

The following clinical types were represented:

Deterioration .....	87
Excitement .....	3
Presbyophrenia .....	4
Depressed and agitated states.....	7
Delirious and confused states.....	10
Paranoid states .....	12
<hr/>	
Total.....	123

### Dementia Paralytica.

With our improved methods of diagnosis and the more frequent use of lumbar puncture as a diagnostic measure the number of patients assigned to this group has grown larger. As stated in the report for 1910, however, our admissions do not show the high proportion of cases of general paralysis found in those institutions which draw extensively from the cities. As shown by table No. VIII, 584 of our admissions for 1911 were from the rural districts, and 201 from the villages of less than 8,000 population, leaving only 252, or 23.6% who came from the larger towns and the cities.

The proportion of cases of general paralysis is much higher in the negro than in the white race, being 10.5% for the former as contrasted with 3.8% for the latter. The reasons for this condition can be readily understood when the prevalence of syphilis in the negro race is recognized, in conjunction with the fact that only in extremely rare instances is treatment for the disease continued longer than a few weeks or months.

During the year 1911 general paralysis was found in 69 individuals admitted to this institution, 3 of whom had spent some months in private hospitals, from which they were transferred to us. A family history of nervous or mental disease

was obtained in 21 of the 41 patients concerning whom reliable information could be secured. Of these 69 patients a history of syphilitic infection was acknowledged by 39, while in 11 additional cases a probable infection was admitted. In 5 instances such a history was denied. No information could be secured concerning the 14 remaining cases.

Accepting the statements in regard to the probable presence of syphilis we find that 90.9% of the patients of whom we have information had contracted syphilis at some previous date.

The following types of the psychosis were observed:

Cerebral type .....	55
Tabetic type .....	14
Total.....	69

#### Psychoses with Other Brain or Nervous Disease.

Of the 44 cases assigned to this group, 2 had been in the Sanitarium formerly. One of them, a white male, whose condition was due to cerebral syphilis, was committed twice during the year, having been taken home on furlough and not returned to the institution until after its expiration.

A satisfactory family history was obtained in only 24 of the 44 cases, and showed the presence of nervous or mental disease in 41.6% of the number.

The following nervous disorders were met with:

Acute chorea .....	1
Anterior poliomyelitis .....	1
Brain tumor .....	1
Cerebral arteriosclerosis .....	15
Cerebral hemorrhage .....	6
Cerebral softening (following hemorrhage or embolism) .....	7
Cerebral syphilis .....	6
Huntington's chorea .....	1
Tabes dorsalis .....	3
Tubercular meningitis .....	1
Undetermined .....	2
Total.....	44

### Alcoholic Psychosis.

Psychoses resulting from the prolonged use of alcohol are found in only a small proportion of the patients admitted to this institution. The difficulty with which alcoholic beverages can be secured in the country and in the villages of this State is in part responsible for this condition. The limited consumption of alcohol is further due to the fact, as stated in table No. IX, that only 233 of the 1,064 patients admitted are recorded as being in affluent circumstances. The greater portion of our population, especially those of the negro race nearly all of whom use alcohol when it can be had, are financially unable to obtain it in quantity, or with any degree of regularity.

This group is composed of only 31 individuals, 4 of whom had been formerly committed to this institution. Of the number, 59% gave a family history of nervous or mental disease, while in 68%, one or more of the immediate relatives were habitual users of alcohol.

The clinical forms presented were as follows:

Acute hallucinosis .....	5
Chronic alcoholism .....	8
Delirium tremens .....	5
Deterioration .....	8
Korsakow's disease .....	2
Paranoid state .....	2
Pathological intoxication .....	1
Total.....	31

### Drug and Other Toxic Psychoses.

This group is composed of 30 patients, 3 of whom had formerly been in the institution. A family history of alcoholism was obtained in 50% of the number, while in 35.7% one or more relatives were found to have been insane or to have suffered from some nervous disease.

The psychosis of one patient, a negro male, seems to have followed his taking, at one time, almost a full bottle of some drug which his physician prescribed in teaspoonful doses.

It appeared to have been a hallucinatory excitement of only a few days' duration, from which he was recovering when admitted. In a second case, also a negro male, an attack quite similar to the one just mentioned seems to have been produced by large doses of quinine.

The psychoses resulted from the use of the following drugs:

Morphine .....	8
Morphine and alcohol .....	2
Morphine and cocain .....	11
Morphine, alcohol and cocain.....	3
Cocain .....	2
Bromo-seltzer .....	1
Paregoric .....	1
Quinine .....	1
Drug undetermined .....	1
<hr/>	
Total.....	30

#### Infective-Exhaustive Psychoses.

This group is composed of 22 patients, a much smaller number than was shown by our last report. The separation of the cases due to pellagra, which were formerly included here, is accountable for this reduction. Family histories of the 13 patients, regarding whom information could be obtained, show the presence of nervous or mental diseases in 76.9%.

None of the 22 patients had a former hospital residence. The following etiological factors were noted:

Influenza .....	1
Pneumonia .....	2
Puerperal toxemia .....	2
Frequent pregnancies with prolonged nursing.....	1
Pulmonary tuberculosis .....	3
Pulmonary tuberculosis with valvular heart disease....	2
Valvular heart disease with purulent endometritis.....	1
Syphilis .....	2
Typhoid fever .....	5
Thyreogenous disorder .....	1
Chronic nephritis with pulmonary gangrene.....	1
Chronic nephritis, tuberculosis and valvular disease....	1
<hr/>	
Total.....	22

### **Allied to Infective-Exhaustive Psychoses.**

The 4 cases composing this group all showed the general features of infective-exhaustive psychosis, but etiological factors, which would account for the conditions, could not be discovered, and in 2 of them additional symptoms, not belonging to that psychosis, were present.

None of the 4 patients had a previous hospital residence, and all of them gave a family history of nervous or brain disease.

### **Psychoses Accompanying Pellagra.**

It has been thought best to form a separate group of the psychoses in which pellagra seems to be the causative factor, or at least the chief factor in their development. Formerly these psychoses were grouped, according to their symptoms, with the forms recognized in our scheme of classification. It appears, however, that quite a large proportion of physicians, who are familiar with pellagra, believe that this disease is directly responsible for a psychosis which manifests itself in a variety of symptoms, combinations of which, in given cases, approach if they do not closely follow those of the accepted forms of mental disorder.

As the disease, pellagra, is of such general interest at present, especially in this section of the United States, and as our knowledge of its cause, course and sequelae is still far from complete we have, on the advice of Dr. Adolf Meyer, tentatively adopted the group of "Psychoses accompanying pellagra." Under this general heading are placed all cases of insanity in which pellagra seems to be the exciting cause, the group being sub-divided into types as the symptoms approach more closely one or another of the groups mentioned. Psychoses of some months' or years' standing, in which pellagra develops, are not included here.

Of the 70 cases comprising this group 2 were formerly in this institution. One of them, a white female, had pellagra shortly before her first commitment. One, also a white female, admitted in 1904 was discharged after seven months

as restored, the diagnosis being manic-depressive psychosis. One white male had a former hospital residence, but we were unable to secure any information concerning him.

The females of both races seem to be more susceptible to this form of psychosis than are the males. Of our 70 cases, mentioned above, 70.3% were females. Fifty-one of the 487 females admitted during the year were assigned to this group, while only 19 of the 577 males received were so classified.

A family history of nervous or mental disease was obtained in 68.1% of the 44 cases in which information on this point could be secured.

According to the clinical manifestations the following types were noted:

Infective-exhaustive type .....	38
Dementia praecox type.....	9
Manic-depressive type .....	8
General paralysis type .....	6
Involution melancholia type .....	2
Senile type .....	2
Type undetermined .....	5
Total.....	70

### Involution Melancholia.

Under this heading were placed 7 cases, 4 white males, 3 white females. Two of the number had previously been in this institution from which they were discharged after a residence of eleven months, one as restored, one as improved. An additional patient had been committed to three different hospitals for the insane, in all of which a diagnosis of melancholia was made, and from each of them he was discharged as improved.

Three of the 7 patients gave a history of insanity in one or more members of their families.

### Undifferentiated Depression.

This group is made up of those cases in which depression is the most prominent feature, and in which the accompany-

ing symptoms are too few or too vague to justify their being included in more clearly defined groups.

It is composed of only 9 individuals, all of whom belong to the white race. None of them had previous hospital residence, and 8 of the number gave a family history of insanity or nervous disease.

### Dementia Praecox.

This group is comprised of 146 patients, or 13.7% of the whole number admitted, and in point of numbers is slightly below the manic-depressive group. Only 19 of these patients had a former hospital residence, 17 of them being discharged from this or other institutions, as "improved," or "unimproved." Two cases are recorded as "restored," a marked and prolonged remission being mistaken, probably, for recovery. In the case of 69 individuals of this group, a family history of mental or nervous disease was obtained, while in 44, no information could be secured. The 103 giving reliable information for at least two generations showed such hereditary factors in 67%. The ratio of negroes classified as dementia praecox is larger than that in any other one of our recognized groups, though it is somewhat lower than was shown in our records for 1910. The decrease in numbers may be due to the fact that pellagrous patients, presenting the symptoms of dementia praecox, have been classed with the former disease, as has been mentioned above.

According to the clinical manifestations this group is divided into the following forms:

Hebephrenic form (including simple deterioration)...	38
Katatonic form .....	31
Paranoid form .....	64
Form undetermined .....	13

---

Total.....146

### Allied to Dementia Praecox.

Of the 50 patients included in this group 43 had never previously been committed to a hospital for the insane. Five of the 7 remaining cases had been in this institution once, one

twice and one three times previously. Four of the number had been discharged as restored, two as improved, one as unimproved. One of those discharged as restored was said to have had four previous attacks, but the anamnesis was so unsatisfactory that considerable doubt was raised as to whether these were separate attacks or merely exacerbations in the course of the same attack. For the past twenty months this patient has been inattentive, indifferent, negative and apparently deteriorated.

In 14 instances the presence of mental or nervous diseases in relatives, for at least two generations, is denied, while in 31 it is acknowledged. Such hereditary factors were noted in 68.8% of patients giving information relative to this point.

#### **Paranoic Condition.**

Of the 15 individuals assigned to this group, 7 had formerly been committed to hospitals for the insane, from which they were discharged as improved or as unimproved. One of the number had been sent to this institution on eight previous occasions. He has shown no disposition to be violent at any time, and as his behavior while in the Sanitarium is usually good his relatives have repeatedly been allowed to remove him after a few months' residence.

In 60% of these cases a family history of nervous or mental disease was obtained.

#### **Manic-Depressive Psychosis.**

Of the 148 patients assigned to this group, 63 had formerly been admitted to this institution or to other hospitals for the insane; 85 had no previous hospital residence. During the past year there was a notable decrease from former years in the number of males, both white and colored, who suffered from this form of mental disorder, while there was a marked though less striking increase in the number of females so classified. To manic-depressive psychosis, as shown by our percentage table, is attributed only 13.0% of the admissions for the year 1911, or 1.3% less than for the year 1910. Eighty of the patients in this group gave a history of insanity or ner-

vous disease in one or more members of the family, this being 54% of the whole number. Such a history, for at least two generations, was denied in 36 instances, while in 32 no information in regard to this point was obtained. Of the 116 cases, therefore, in which reliable family histories could be secured, a neuropathic or psychopathic heredity was acknowledged in 68.9%.

The psychosis presented the following forms:

	White	Colored	Total
Manic attack .....	48	45	93
Depressive attack .....	20	11	31
Circular form .....	4	5	9
Mixed form .....	13	2	15
	<hr/> 85	<hr/> 63	<hr/> 148

Of these 148 patients, 89 gave a history of former attacks as follows:

One previous attack.....	47
Two previous attacks .....	11
Three previous attacks .....	11
Four previous attacks .....	7
Five previous attacks .....	2
Six previous attacks.....	4
Seven previous attacks.....	1
Eight previous attacks.....	1
Ten previous attacks.....	1
"Several" previous attacks.....	1
"Many" previous attacks.....	2
Total.....	<hr/> 89

### Allied to Manic-Depressive Psychosis.

The cases included under this heading present the general features of manic-depressive insanity, though in some instances one or more of the cardinal symptoms of this psychosis are wanting, while in some, additional symptoms belonging to other groups, are present.

Of the 47 patients so classified, 14 had previous hospital residence. A family history showing the presence of nervous or mental disease was obtained in 57.4% of the number.

### Epilepsy.

The number of epileptics admitted to the institution during the year 1911 was much smaller than that for the previous year, being 7.5% of the whole number received. Nine of the number had formerly been confined in hospitals for the insane from which they were discharged, 4 as improved, 4 as unimproved. One escaped from this institution and was discharged at the expiration of 90 days.

Of the 55 patients of whom we have information, insanity or nervous disease in one or more relatives was acknowledged in 58.1%. A history of paternal alcoholism was given in 62.2%. Maternal epilepsy was noted in 5 cases, paternal epilepsy in 1, while other relatives of 8 additional cases suffered from this disease. We find therefore a family history of epilepsy in 25.4% of these patients, the number of relatives so afflicted being 22.

According to the clinical manifestations the following conditions were noted.

Deterioration .....	62
Excitement, simple .....	8
Excitement, hallucinatory .....	6
Dazed state .....	2
No mental change noted.....	2
Total.....	<hr/> 80

### Hysterical, Psychasthenic and Neurasthenic Psychoses.

Ten cases were grouped under this heading. One of the number had a previous hospital residence of four months, at the expiration of which time she was discharged as improved. In one instance no family history could be secured, but in 66.6% of the 9 remaining cases the occurrence of nervous or mental disease was noted.

The form of psychosis was as follows:

Hysterical .....	2
Psychasthenic .....	3
Neurasthenic .....	5
Total.....	10

#### Other Constitutional Disorders and Inferiorities.

To this group were assigned 35 individuals of whom 4 had formerly been in the institution, 2 having been discharged as improved, 2 as unimproved. A family history of alcoholism was obtained in 24 of the number. Of the 33 cases in which information could be obtained the occurrence of mental or nervous disease was noted in 60.6%.

A further classification of these patients was made as follows:

Constitutional psychopathic state .....	10
Constitutional inferiority .....	25

The former group was comprised of 5 white males, 1 white female, 3 negro males and 1 negro female. The white males showed no intellectual deterioration. On the contrary two of them appeared to be exceptionally bright, but all manifested an instability of character, were incapable of steady application, evinced a preference for the companionship of their social inferiors, and had been for years sources of anxiety and mortification to their relatives. All of them showed criminal tendencies, one sexual perversion. Three were prone to exhibit ungovernable outbursts of temper on small provocation. Two expressed paranoid ideas, and in two hallucinatory episodes were noted.

The white female manifested emotional instability, uncontrollable rage, impulsive acts, became excited or depressed with insufficient reason, and was suspected of sexual irregularities.

The three negro males, brothers, gave evidence of weakness of judgment and lack of emotional balance. They were subject to periods of extreme religious excitement, and a mild

paranoid trend was apparent. One of them acknowledged a hallucinatory episode.

The negro female was an especially bright girl, 16 years of age, but was uncontrollable, given to ungovernable rages in which she became homicidal. She was also guilty of immoral actions.

All individuals composing the second group showed mild intellectual defect. Most of them gave a childhood history of being hard to control, obstinate, disobedient, cruel, untruthful. Irritability, excitability, unaccountable depressions were noted and immoral practices were early acquired. Later in life the emotional instability and defects of character became more noticeable, criminal tendencies appeared in some and in some sexual perversions. Hallucinatory episodes were noted in several cases, while paranoid trends were not infrequent. In one case hysterical tantrums were present occasionally.

### Imbecility and Idiocy.

Of the admissions for the year, 60 individuals were classified as imbeciles, 7 as idiots. Six of the imbeciles and two of the idiots also suffered from epilepsy, which appeared in childhood. Seven of these patients had a former hospital residence, having in every instance been discharged as unimproved.

In 34 instances no family history was obtained. Of the remaining 33 cases, nervous or mental disease was present in the relatives of 84.8%, while a family history of alcoholism was acknowledged in 69.8%.

### Not Insane.

Nine of the patients admitted during the year gave no evidence of insanity. One of them, a negro male, had been in the institution on two previous occasions. Before his last commitment he had been confined in jail for some months, where he presumably had an attack of excitement from which he had recovered before being returned to the Sanitarium.

Five of the number were criminals, who either feigned insanity, or were committed through the efforts of relatives in the hope of escaping punishment for their acts.

The three remaining patients probably had psychoses of short duration, from which they recovered before admission.

Three of the nine cases gave a family history of nervous or mental disease.

### Unclassified.

The number of unclassified cases is somewhat larger than that given in our last report. In the case of many of the patients admitted it was impossible to secure trustworthy information regarding the onset, duration and manifestation of the psychosis. In other cases inaccessibility of the patient to examination, the presence of obscure symptoms or unusual combinations of the symptoms exhibited served to render the diagnosis uncertain.

An effort has been made not to force our grouping, but rather to leave these doubtful cases unclassified, temporarily at least, in the hope that subsequent observation will allow them to be more accurately assigned.

Ten of the patients, of whose disorder no diagnosis was made, had a former residence in this or other similar institution, from which 4 were discharged as restored, 3 as improved, while the condition on discharge was not given in 3 instances.

No family history was obtained in 14 of the number, but of the remaining 31 cases a neuropathic or psychopathic heredity was admitted in 51.6%.

In the following tables will be found more detailed information in regard to the patients admitted during the year:

## Report of Superintendent of Nurses.

Dr. L. M. Jones, Supt. Georgia Sanitarium.

Dear Sir—I have the honor of submitting the second annual report of the Training School.

During the year there were:

Applications for admissions .....	126
Probationers admitted .....	22
Probationers accepted .....	15
Probationers not accepted .....	7
Graduates on the staff .....	2
Number of pupil nurses .....	25

### Plan of Instruction.

Instruction is given by lectures, demonstrations and practical work on the wards.

### Announcement of Course of Study.

#### First Year.

	Hours
Nursing .....	32
Dietetics .....	16
Anatomy and Physiology .....	16
Bandaging .....	8
Emergencies .....	8
Materia Medica and Therapeutics .....	16
Hygiene and Bacteriology .....	16
Pharmacy .....	16

#### Second Year.

Medical nursing .....	16
Surgery .....	16
Surgical nursing .....	16
Laboratory .....	6
Nursing ethics .....	10
Hydrotherapy and massage .....	16
Diseases of the ear, eye, nose and throat .....	10
Nervous diseases .....	6

Gynecology .....	10
Theory of obstetrics .....	6
Mental diseases .....	16
Nursing the insane .....	16

The nurses are sent to some general hospital in the state for their practical work in obstetrics.

We are very much in need of a nurses' dormitory, where the nurses can be away from the patients and work when they are off duty. I do not know of anything they would appreciate more.

Grateful acknowledgment is made to the physicians for lectures and medical attendance upon members of the school.

Respectfully submitted,

MAE MIESSE.

Supt. of Nurses.

**Apothecary's Report.**

Milledgeville, Ga., Jan. 1, 1912.

Dr. L. M. Jones, Superintendent.

Dear Sir—I have the honor to submit to you my report of the Apothecary Department for the year 1911. It is the policy of this department to manufacture all pharmaceuticals, and preparations used by the institution, and we have done so at all times where it was economy to do so, restricting purchases to chemicals, and such specialties as were required by the physicians.

**Statement.**

The following is a statement of all expenditures, etc., of Apothecary Department for the year 1911:

Amount of drugs purchased, including all druggists' sundries, dental and laboratory supplies, all preparations for fumigation, disinfecting and sanitary purposes; also all alcohol, wines and whiskies.....	\$ 8,301.34
Amount of drugs sold officers and employees.....	281.88
Number of prescriptions filled.....	31,766
Amount of disbursements .....	\$ 8,420.15
Balance of stock on hand .....	2,307.69
Amount of fixtures, etc., on hand.....	385.50

Respectfully submitted,

D. S. CARRINGTON,

Apothecary.

### Dentist's Report.

Dr. L. M. Jones, Superintendent.

Dear Sir—The following is an itemized statement of the work done in the Dental Department during the year 1911:

Extractions .....	834
Gold fillings .....	23
Porcelain inlays .....	1
Amalgam fillings .....	576
Cement fillings .....	222
Gutta-percha fillings .....	7
Enamel fillings .....	1
Nerve cappings .....	25
Nerve treatments .....	22
Nerves devitalized .....	56
Root treatments .....	139
Root fillings .....	78
Application of mummefying paste .....	7
Abscess treatments .....	59
Abscesses lanced .....	29
Lancing gums over 3rd. molar .....	10
Treating gums about 3rd. molar .....	4
Treatments for Pyorrhoea Alveolaris .....	9
Cleaning teeth (number of patients) .....	23
Applications of silver nitrate .....	7
Removing calcareous deposits (number of patients) .....	44
Treatments for facial neuralgia .....	18
Treatments for acute odontalgia .....	135
Treatments for pericementitis .....	6
Treating gums (number of patients) .....	24
Treatments for oral ulcers .....	12
Treatments for stomatitis .....	3
Plates made .....	3
Plates repaired .....	18
Porcelain crowns .....	2
Crowns reset .....	9
Bridges removed (permanently) .....	2
Bridges reset .....	2
Bridges repaired .....	1
Shaping up disfigured teeth (number of patients) .....	4

# GEORGIA STATE SANITARIUM.

71

Setting screws in roots .....	4
Operations for Ranula .....	2
Removing sequestrum from soft palate .....	1
Treating open sinus in soft palate .....	2
Special calls to wards .....	123
Number of new patients examined .....	768
<hr/>	
Total number of patients treated .....	1,440
Total number of operations and treatments .....	2,393
<hr/>	

Respectfully submitted,  
 GEORGE H. GREEN,  
 Dentist.

### Report of the Pathologist.

Milledgeville, Ga.

Dr. L. M. Jones., Supt., Georgia State Sanitarium.

Dear Sir—I have the honor to report on the following work performed in the Pathological Laboratory from Sept. 26, 1911, to Dec. 31, 1911, inclusive:

199 specimens of urine have been examined for albumen, glucose, reaction, color, odor and specific gravity and the sediment from each examined microscopically for casts, epithelial and blood cells, etc.

32 specimens of sputa have been examined for tubercle bacilli.

15 specimens of feces have been examined for animal (parasites).

15 specimens of blood have been examined for malaria, etc.

6 tumors have been examined.

Miscellaneous (examinations) as follows:

1 special urine and autogenous vaccine from same; 1 specimen of milk for tubercle bacilli; 1 ascitic fluid for cell count and differentiation; 1 chancre; 5 modified Wasserman reactions.

The largest portion of my time was devoted to the examination of 67 specimens of cerebro-spinal fluid which was in most instances obtained from patients suffering with pella-gra. A detailed report of these is herewith appended.

In addition to the above 6 autopsies were performed and tissues from the same examined microscopically.

Of the 199 specimens of urine examined the following figures will show the results obtained:

18.09% contained albumen.

3.01%       "       only the slightest trace.

6.53%       "       albumen and casts.

4.02%	"	hyaline casts.
3.51%	"	hyaline and granular casts.
2.51%	"	casts without albumen.
6.53%	"	a reducing substance for copper sulphate.

Of the 13 specimens giving a positive test for glucose, or rather a reducing substance for copper sulphate, four were from patients that had been addicted to the use of drugs and recently admitted to the institution; four others were doubtful as future tests failed to reveal anything that would indicate the presence of glucose. Possibly alkaptonuria, although very rare, may prove to be a factor in such cases as these, and I hope to investigate and report on such cases at a later date. The remaining five cases were undeniably diabetics, one of them showing a specific gravity of over 1.060, which is sufficiently uncommon to report.

In examining for glucose I have used principally Benedict's one solution reagent which consists of the following:

Copper sulphate .....	17.3	grams.
Sodium citrate .....	173.0	"
Sodium carbonate (Anhyd. salt).....	100.0	"
Distilled water .....	1,000.0	cc.

Dissolve sodium salts in 700 cc. of water with the aid of heat and the copper sulphate in the remaining water and mix while stirring. See the Journal A. M. A., Oct. 7, 1911, for original article.

The above reagent by actual comparison to Fehling's solution, using a 1-10% solution of pure anhydrous glucose, proved more reliable, and since it is pointed out in several text-books on the examination of urine that Fehling's solution will show the presence of glucose in pure solution more readily than when in urine seems to me to be sufficient reason for using the former. Not the least important advantage is that you have only one solution whereas in Fehling's you must keep two solutions made, and at least one of those is not very stable.

Most of the above specimens of urine came from the reception wards, and as a rule were obtained early in the morning.

Of the 32 specimens of sputa examined for tubercle bacilli I give the following results: 2 were from the same patient with negative results; 3 were from the same patient with negative results. Of the original 29 specimens 2 or 6.8% contained tubercle bacilli.

The Antiformin method of examination as recommended by Drs. Pepper and Klaer, of Philadelphia, has been used as a routine procedure with all specimens, being checked and controlled by other methods if there was any doubt or necessity. As a matter of fact it has been sufficiently demonstrated by many reliable workers that the use of Antiformin in examining sputum for tubercle bacilli is next to animal inoculation the best means that can be used.

The 15 specimens of feces examined gave the following findings:

Seven of these were from the family of one of the employes, one showing an infection with (*tricocephalus*) *dispar*. Of the remaining 8 specimens from patients, 4 contained parasites or ova; 2 being *uncinaria americana* and ova, 1 showing *tricocephalus dispar* ova and (*rhabitiform*) embryos of *strongyloides*, and the other one contained ova of *ascaris lumbricoides*.

The 15 specimens of blood examined gave the following findings:

Nine examined for malaria, and 3 were positive; 3 examined for (Widal) reaction with one positive reaction; 2 haemoglobin estimations; 1 red cell count, and 3 differential counts.

Six tumors and material were received from the surgical wards and examined as follows:

- 1 Fibroid tumor of the uterus.
- 1 Colloid carcinoma of the breast.
- 1 Hypertrophied tumor of the labia.
- 1 Cystic adenoma of the scrotum.
- 1 Naevus of the skin.
- 1 Specimen of uterine scrapings.

Miscellaneous examinations were as follows:

One specimen of urine for diazo reaction and tubercle bacilli with negative results. *Bacillus pyocyaneus* was isolated from this urine and an autogenous vaccine made and used on the patient with little, if any, perceptible result or benefit. One specimen of milk was examined for tubercle bacilli with negative results. One cytological examination of ascitic fluid was made, and diagnosed as a transudate. One supposed chancre was examined for spirochetes with negative result.

Three spinal fluids and two blood serums were examined for the modified Wassermann reaction with the following findings: Two spinal fluids were from cases of paresis and gave negative reactions; one was from a supposed case of pellagra and gave a negative reaction. The specimens of blood serum were from cases of paresis and both gave positive reactions. The Nogouchi modification, as outlined by him in the 1911 edition of his book, "Serum Diagnosis of Syphilis," was the method or modification used. Dr. Fraser B. Gurd's modification of the Wassermann test was tried in four cases, but was so unsatisfactory that no record was made of the results. Dr. Gurd's modification consists of using antigen, active or unheated blood serum and corpuscle suspension, the active or patient's serum, if not over 36 hours old, being supposed to furnish the necessary complement for the test. His theory is certainly very plausible, and he has by actual tests in over 500 cases proven that it is practically as reliable as other modifications. See the following number of the Jour. Infect. Diseases, Vol. 8, No. 4, Jour., 1911, pp. 427 to 443.

Owing to an unavoidable delay in obtaining guinea pigs, and the most of them having died since they arrived, I have been unable to make any more modified Wassermann tests. It is unfortunate that we have not been able to give these findings in our spinal fluid examinations, as it would make them of more value.

Six autopsies have been performed, and I herewith give an abstract of the findings in each case with a short clinical history of the patient before death.

Autopsy No. 479. B. H., colored female, age 39 years, admitted June 7, 1902; died October 15, 1911. Clinical diagnosis, manic-depressive. Disposed to be destructive. Cause unknown. Previous attacks none. Cause of death, mitral stenosis. Abstract of autopsy findings were as follows:

Body is that of a well preserved, large, female negro. Abdomen is greatly distended and the limbs are edematous. One litre of straw colored fluid obtained from pleural cavities; two litres obtained from the abdominal cavity. Heart weights 433 grams, and shows several milk white patches on the external surface; is somewhat soft, flabby and very much enlarged and dilated; mitral opening almost closed, measuring less than .5 centimeters, and resembles the typical buttonhole variety. Other valves show a few warty vegetations. There are many adhesions between the pericardium and the left lung. Few congested areas in the substance of both lungs. Liver grayish mottled on external surface, weighs 1,770 grams, and the cut surface throughout resembles a nutmeg. Gall bladder enlarged, closed and contains thirty or forty small stones. Kidneys show very adherent capsule, very prominent tufts and a very thin cortex. Uterus shows multiple fibroids. Brain negative.

Anatomical Diagnosis—Pleurel, pericardial and abdominal effusion; mitral stenosis; (hypostatic) pneumonia; cirrhosis of liver; cholecystitis and cholelithiasis; chronic interstitial nephritis and multiple fibroma of the uterus.

Microscopical Diagnosis—Pneumonia, fibroids of uterus, cirrhosis of the liver and hyperplasia of the heart muscle.

Autopsy No. 480—M. A. W., white female, age 63 years.. Admitted February 6, 1909; died October 25, 1911. Clinical diagnosis, senile dementia. Widow, mother of nine children; previous attacks, none; duration, three years. Cause of death, pellagra.

Abstract of autopsy findings three hours after death: Body is that of an old white female. No rigor mortis. Pupils unequal. Scaly eruption over arms, forearms and neck. Dura thickened and shows few adhesions to pia mater. Brain weighs 910 grams. No atheroma at base. Right heart flabby. Right lung weighs 900 grams, lobes are adherent, is

tough and emphysematous. Shows several small hardened areas in apex and lower lobe at inner border shows several small whitish areas, which contain a thick cream colored fluid. Left lung in a collapsed condition, bronchial glands filled with coal black material.

Kidneys, liver and spleen are negative. Intestines show thickened and congested mucous coat. Aorta atheromatous.

Anatomical Diagnosis—Atelectasis, anthracosis, atheroma of aorta, adhesive pleurisy, broncho-pneumonia, enteritis, pachymeningitis and old tubercular lesions.

Microscopical Diagnosis—Bronchial glands show numerous areas of pigmentation; intestines show thickening of muscular coat with round cell infiltration of mucosa and glands. Cerebrum shows atrophy of cortex and cellular infiltration of pia. Cerebellum negative. Lungs and bronchial glands show large deposits of pigmented material. Alveoli of lungs show thinned walls and distention and at other points are contracted and the lining epithelial cells are scanty.

Autopsy No. 481—L. P., white female. Age 21 years. Single. Admitted October 27, 1911, died November 7, 1911. Fairly well nourished. Some stigmata, flabby muscles, headache, vertigo, hypersthesia, paresthesia. Slight acneform eruption around mouth and over arms and shoulders. Deep reflexes highly exaggerated. Motor disturbances. Patient unable to walk. Marked tremor of the hands, face, fingers and some twitching of the tongue. No defect in speech. History of convulsions as related by patient. Complete examination unsatisfactory on account of non-co-operation of patient. Clinical diagnosis pellagrous insanity. Cause of death, pellagra.

Abstract of autopsy findings nine hours after death, limited to brain and cord. Scalp thick and shows an abundant supply of fat. Calvarium very thick and adherent, and removed with difficulty. Dense adhesions throughout cranial cavity between dura and pia-arachnoid. Dura is very much thickened. Pia strips without decortication, and shows over the posterior border of right frontal lobe a dirty reddish area two centimeters in diameter. Optic (thalamia) appear to be

much harder than normal. Spinal cord shows a very thick dura and excess of spinal fluid.

Anatomical diagnosis—Pachymeningitis. Microscopical diagnosis; sections from brain show nothing of note. Sections of spinal cord from the cervical region show some atrophy of ganglion cells in anterior horns and one small area of degeneration in one horn involving the cells and gray matter. Sections from lumbar region also show atrophy of ganglion cells in anterior horns, and the entire cord appears to be infiltrated with round cells. No lesions found in posterior regions, except possible excess of fatty material.

Autopsy No. 482—M. P., white female, age 71 years. Admitted April 23, 1900; died November 9, 1911. Duration of disease one year previous to admission. Attacks or condition becomes worse at monthly intervals. Clinical diagnosis, senile psychosis. Cause of death, acute pneumonia and pulmonary tuberculosis.

Abstract of autopsy findings fifteen hours after death: Rigor mortis complete, pupils equal and several areas of marked discoloration on hands and forearms. External condyle of right tibia very much enlarged. Subglenoid dislocation of head of left humerus, which is evidently of long standing. Dense pleural adhesions on each side. Lower curvature of the stomach extends to a line drawn from the crest of one ilium to the other. Heart is well covered with fat, contains no well marked clots, weighs 240 grams and shows thin valves with very much thickened fibrous ring at aortic opening. Apex of right lung contains one mass of whitish areas and cavities which are filled with milky fluid, many of the cavities being entirely walled off. Left lung more or less the same appearance. Stomach dilated somewhat. Liver and spleen negative. Seven irregular black stones in gall bladder and much black ropy fluid. Left kidney weighs 65 grams, is small and contracted, capsule very adherent and when stripped leaves a roughened cortex. Right kidney weighs 500 grams. Shows adherent capsule and roughened cortex with enlarged tufts, etc. Aorta atheromatous.

Anatomical Diagnosis—Chronic pulmonary tuberculosis,

tubercular pleurisy, acute lobar pneumonia, fatty infiltration of the heart, ptosis of the stomach, cholelithiasis, chronic interstitial nephritis and arterio-fibrosis.

Microscopical Diagnosis—Sections made from congested areas of lung show cheesy degeneration and consolidation of lung structure, showing that it must have been a tubercular pneumonia. Kidneys show a diffuse inflammation.

Autopsy No. 483—M. R., colored male, age 39 years. Admitted November 24, 1911; died November 28, 1911. Patient had irregular head, asymmetrical face, muscles flabby and small, mucous membranes anaemic, numerous scars over the body, headache and vertigo, skin over back of feet, knees and knuckles dark and have a leathery feeling; also on back of neck and arms. No control of bladder and rectum; patellar reflex slightly exaggerated. Vocal fremitus increased over both lungs and dullness on percussion and rales. Patient very weak, and information obtained from him is of no value.

Clinical Diagnosis — Infective-exhaustive psychosis. Cause of death, gangrene of lung and chronic nephritis.

Abstract of Autopsy Findings Five Hours After Death—Body emaciated, rigor mortis marked; arms, forearms and neck show numerous skin lesions that resemble rope burns. Skin around these lesions and for some distance away has an ashen gray appearance. Dense adhesions throughout abdominal cavity; appendix appears to be the point of original inflammation. Heart and right lung negative. Left lung is very black and soft in upper lobe and resembles a dark red blood clot and has a very foul odor. Kidneys show thin cortex, adherent capsule leaving a roughened surface when removed and very much congested condition of tufts and interstitial tissue. Liver contains an excess of blood. Gall bladder negative. Invagination of the jejunum 17 centimeters long; easily reduced. Spleen negative. Large intestine contains much fecal matter and is very much congested, but shows no ulcers.

Anatomical Diagnosis—Gangrene of left lung, old tubercular lesions, chronic diffuse nephritis, acute intestinal obstruction and chronic appendicitis.

Microscopical Diagnosis—Section from left lung exam-

ined, but owing to the degenerated condition was unsatisfactory. Kidneys show a degenerative change of the tubular and glomerular epithelium. The glomeruli are shrunken and capsule of same very much thickened.

Autopsy No. 484—J. W., white female, age 65 years. Admitted May 5, 1911; died December 12, 1911. Died suddenly after having had quarrel with another patient about four hours previously. Patient gave a history of attacks of mental depression in 1909. Present trouble began two months previous to admission. Admission papers gave a history of uraemic poisoning. Clinical diagnosis senile psychosis. Cause of death, rupture of aorta. Physical examination showed disturbance of the deep reflexes, some impairment of motor functions. Systolic murmur heard over a large area, area of cardiac dullness markedly increased to the left.

Abstract of autopsy findings two and one-half hours after death: Body that of a large elderly white female, well nourished and showing no rigor mortis. Calvarium very adherent to dura and latter to pia-arachnoid. Arteries at base of brain show many whitish yellow areas. Left supra-orbital cavity filled with pus. Brain weighs 1,255 grams. Pericardium contains 700 cc. of light red blood and four or five small clots. Heart is very much enlarged and dilated. Ascending portion of aorta, just above its origin from left ventricle, shows an irregular tear in the intima over four centimeters in length. This tear or rupture does not extend through the other coats, but shows much evidence of the blood having burrowed beneath in all directions, as the surrounding tissues for some distance are very dark and congested. Heart, with about 7 centimeters of aorta attached, weighs 940 grams. Aorta at point of rupture shows a marked tendency to aneurysm formation. Aortic opening is large, and valves are insufficient to a marked extent. Left lung weighs 270 grams. Posterior portion of lower lobe adhered to chest wall. Right lung weighs 340 grams and is negative. Kidneys contain many cysts on the cortex. Capsule adherent and leaves a roughened nodular surface. Kidney structure is hard and cuts with difficulty. Liver weighs 1,850 grams; does not show the lobular markings distinctly and has a grayish appearance. Gall

bladder contains 19 hexagonal stones and a small amount of bile.

Anatomical Diagnosis—Aortic regurgitation and rupture of aorta, general arteriosclerosis, pachymeningitis, cardiac hypertrophy, chronic interstitial nephritis, cystic kidneys, cirrhosis of liver and cholelithiasis. No microscopic examination made.

Soon after taking charge of the laboratory, Dr. E. M. Green, clinical director, suggested the desirability of examining the cerebro-spinal fluid of patients suffering from pellagra, owing to the presence of spinal and cerebral manifestations being so evident in most of these cases. The examinations of each specimen were made immediately after puncture and consisted of total cell count per cb. mm., reaction, presence of a reducing substance for copper sulphate, Nogouchi's butyric acid reaction for increase in globulin content and making a smear from sediment after centrifuging for differentiation of cell types. At the time of puncture the fluid was collected in chemically cleaned and sterilized tubes; 2-3 cc. in a small test tube and about 10 cc. in a sharp pointed centrifuge tube. That portion collected in the test tube was the last taken in order to avoid any foreign material in the needle or blood cells picked up by the same. To this portion, as soon as possible, one or two drops (from a freshly made capillary pipette) of the following stain is added:

Methyl violet, 0.1.

Glacial acetic acid, 2.0.

Distilled water, 50.0.

The tube is shaken thoroughly and allowed to stand for 5-10 minutes, when a few drops are withdrawn by means of another freshly made pipette, and after allowing the first one or two drops to escape, one drop is placed in the counting chamber of a haemocytometer, cover glass adjusted and slide allowed to stand on microscopic stage for at least fifteen minutes before counting to allow all cells to settle upon the ruled surface and thoroughly take up stain. The Zappert style of haemocytometer was used in all specimens here reported, except the first six or eight, in which the old style Thoma-Zeiss was used. Proceed as if making a white count, and count all

of the cells within the entire ruled surface, obtain average for one square and by multiplying by 10 (1-10 required depth in one layer) gives the number of cells per cb.mm.

As the addition of one or two drops of the staining fluid to 2 or 3 cc. of fluid reduces the dilution to a minimum, it is not necessary to use the white cell pipette for making dilutions. As a matter of fact most workers disregard the dilution in their calculations when pipette and small amount of stain are used in these examinations. Even if the dilution was measured and allowed for it would only add a few more cells to the sum total, which for practical purposes is unnecessary. One drop of stain added as above indicated will stain all cellular elements sufficiently well for demonstration. The important point is to make the count soon after puncture, in order to overcome the tendency of cells to fall to the bottom of tube. As to the degeneration of cells after standing, this in my experience does not occur nearly so quickly as has been reported, and I am inclined to think that many supposed instances of this kind were really specimens that contained degenerated cells while present in the spinal canal and that such degeneration has a pathological significance.

Many of my examinations revealed a large percentage of degenerated or unknown cells, as you will see by the tabulated report. I have upon several occasions examined specimens after standing for five or six hours and failed to find any perceptible difference in the number of degenerated cells as compared to the first examination soon after puncture. As to the percentages here given, they are obtained from a differential count of the smears and can only be a rough approximation as anyone must know who has ever attempted to obtain smears from the sediment after centrifuging.

The following is the technic used in making smears. That portion of fluid collected in centrifuge tubes was swung at the rate of 2,500 to 3,000 revolutions per minute for thirty minutes in an electrically driven centrifuge, supernatant fluid poured off and tubes allowed to thoroughly drain. Sediment then taken up with a capillary pipette and deposited in not less than two equal portions upon a freshly cleaned slide, spreading sediment out so that it will cover approx-

imately a surface of .5 centimeters in diameter. Smears are allowed to dry in the air, fixed with absolute methyl alcohol for 1—2 minutes and then stained with haematoxylin and eosin, allowing 3—5 minutes for former and 1—2 minutes for latter. Examine under oil immersion lens and count as many as 200 or 300 cells, depending of course upon the quantity that can be found and the uniformity of smear. The Alzheimer method of cell differentiation, which requires fixation, embedding in celloidin and use of a microtome is said to be the best, but at the same time conceded to be inaccurate by others. I have not attempted to use this method, because I believe any method of cell differentiation used in spinal fluid examinations to be very inaccurate as to the percentages of each type present. The Alzheimer method is no doubt the best at present for studying the histological characters of these cells. I have ordered from Leitz a special counting chamber for total cell counts, which allows an estimation from a larger amount of fluid than in the Zappert style of haemacytometer. By using this larger counting chamber a fair idea as to the percentages of each type can be obtained in spinal fluids that show a cell content of over 40—50 per cb.mm., although in using this method of differentiation the magnification must necessarily be too low to allow anything like accuracy.

As to the types of cells found, I have classified them as follows: lymphocytes, polymorphonuclear elements, plasma cells, endothelial cells and unknown or degenerated cells. Other authors describe as many as seven different types, and Hough (Bulletin 1, Government Hospital for Insane) using the Alzheimer method of examination describes ten different types with several subdivisions or varieties for each type. O. P. Bigelow, the American Journal of Insanity, Vol. 67, No. 4, April, 1911; examined 222 spinal fluids in twenty different types of disease and he recognized only two classes or types. He designated them as polymorphonuclears and mononuclears. I might mention here that his technic for counting cells is somewhat similar to mine, except that he dilutes a convenient amount of fluid with an equal amount of 1 per cent. acetic acid solution, to which enough Gentian

Violet has been added to give quite a high color. He uses a Turk chamber for counting, which is practically the same as a Zaptér ruling as there is only a total ruled area of 9 square millimeters to count from and the depth of fluid the same, consequently in making his calculations the only difference is that he must multiply by 2 to correct for the dilution.

Description of cell types are as follows:

Lymphocytes are generally found in excess and appear as small dark cells (or nucleus with little or no protoplasm), varying in size from a little less to a little larger than a red blood cell. This type of cell is pretty well agreed upon by most workers and should not be easily mistaken for any other.

**Plasma** cells vary in size from a little less to two or three times the size of a lymphocyte. Show a darkly staining nucleus and granules with a more or less clock-like arrangement, and also at times have a bitten out appearance.

**Polymorphoneuclar** elements present many variations in their character, but for the most part resemble more or less the same type found in the blood although they are smaller, show different divisions of neuclei and different staining qualities.

**Endothelial** cells as given here include all cells of that type, but for the most part are the ordinary tissue type and need no description. Hough claims that this type of cell usually comes from the vessels and many are no doubt picked up by the needle while entering the canal.

**Unknown and degenerated** cells need no description.

A very complete description of the different types of cells found in spinal fluid is given by Bybee & Lorenz in "The Archives of Internal Medicine, Jan., 1911," when examined by the smear methods. For a description of cells as found by the Alzheimer method see the articles by Dr. Hough in Bulletins 1 and 2, Government Hospital for Insane.

The test for a reducing substance for copper sulphate was made by adding .5 cc of spinal fluid to 2 or 3 cc of Benedict's one solution reagent and heating for two to three min-

utes when a slight green to yellowish green precipitate forms. Most of the specimens here reported showed a positive test. However, there seems to be some variation in the amount of reducing substance present depending probably upon the stage of the disease, as one case of cerebral syphilis showed negative results and one specimen of fluid withdrawn after death gave a negative result with an exceedingly high cell count. This increase in cell content after death has been observed and reported by many others.

The reaction as you see has been alkaline in all cases and according to many other reports is constantly so, though there seems to be different degrees of alkalinity as judged by testing with litmus paper.

Nogouchi, in connection with his work on the serum reaction of Wassermann in syphilis, first called attention to and originated the butyric acid reaction in testing spinal fluids and blood serum. He at first thought this reaction applied more particularly to paresis and that the degree of reaction varied in proportion to the cell content. Paresis as a rule shows a larger amount of cells per cb. mm than most other diseases, and no doubt the degree of reaction, or increase of globulin content, depends to a great extent upon the increase in cellular elements, but the reaction also exists in many other diseases as has been pointed out by F. M. Mott, *Lancet*, London, July 2, 9, 1910; J. V. May, Binghamton State Hospital, Report, 1911, and W. H. Hough, *Bulletin*, 2, Government Hospital for Insane. I have found it present in the most of cases examined. The test consists of heating .2 cc. of spinal fluid with .5 cc. of a 10% solution of pure butyric acid in normal (.9%) solution, adding .1 cc. of normal sodium hydrate and reheating. A positive reaction is indicated by a flocculent or granular precipitate, which gradually settles to the bottom of the tube. The degree of precipitation varies, but there should be no difficulty in reading the reaction. A cloudiness does not constitute a positive reaction and the specimen of spinal fluid must be free of red blood cells, as they give a precipitate that is misleading.

The following table gives the results of the findings in each case:

Number	Name	Diagnosis	Cells per cb. M. M.	Per cent. of Lymphocytes	Per cent. of Polys	Per cent. of Plasma cells.	Per cent. of Endothelial cells.	Per cent. of unknown or degenerated cells.	Butyric acid reaction	Reduction of Cu So 4	Reaction to Litmus	Remarks, etc.

x Positive Reaction.

— Negative Reaction.

o Not Tested or Counted.

The average number of cells per cb.m.m. for all cases of pellagra (exclude No. 46) was 31.26; for all cases of paresis 72.17 per cb.mm. and for others 7.66 per cb.mm. This includes those not counted as well. The average number of cells in paresis as given here compare favorably with the findings of others, although the number is too small for a fair estimate.

As to the results in pellagra I have not been able to find any report of work along this line. However, I feel justified in concluding that there is an increase above normal in the cellular elements of the cerebro-spinal fluid of pellagrins, depending probably upon the stage and severity of the disease as to the quantity present and their appearance.

Regarding the pellagra cases examined, I wish to state that the most of them were colored females in the service of Dr. W. J. Cranston, Assistant Physician, who made the most of the punctures and assisted me with many suggestions while making these examinations. Dr. Cranston has made some valuable clinical observations in connection with this work, which will no doubt aid in forming more definite conclusions regarding the results obtained.

In conclusion, I desire to thank you and each member of the Staff for your kindness and assistance since taking up the laboratory work. To Drs. E. M. Green and J. W. Mobley I am especially indebted for many suggestions and help with the work.

Very respectfully,  
S. S. HINDMAN,  
Pathologist.

## Report of Treasurer

Milledgeville, Ga., Jan. 3. 1912.

Dr. L. M. Jones, Superintendent,

Georgia State Sanitarium.

Dear Sir—I beg to hand you herewith a statement of my receipts and disbursements of my office for the fiscal year:

### Receipts.

Jan. 3. 1911—	
Balance on hand .....	\$ 10,619.04
Jan. 3, 1912—	
Received from State Treasurer .....	468,992.00
Received from L. J. Lamar-Std. ....	21,786.02
	\$501,397.06

### Disbursements.

Jan. 3—	
Total Disbursements .....	\$478,717.27
Jan. 3—	
Balance on hand .....	\$ 22,679.79

I attach hereto certificate of the Merchants & Farmers Bank which is made a part of my report.

Respectfully submitted,

L. H. ANDREWS,

Treasurer.

Milledgeville, Ga., Jan. 3, 1912.

This is to certify, that the Balance to the credit of Mr. L. H. Andrews, Treasurer, The Georgia State Sanitarium, subject to his check, at the close of business Jan. 1st, 1912, was: Twenty-two thousand six hundred and seventy-nine and 79-100 dollars (\$22,679.79).

L. C. HALL Cashier,

Attest—

The Merchants & Farmers Bank.

JNO. T. DAY, N. P.,

Baldwin County, Georgia.

### Report of Steward.

Dr. L. M. Jones, Superintendent.

Dear Sir—Permit me to transmit through you, to our Honorable Board of Trustees, this my report as Steward for the year 1911.

I submit the following described Exhibits and Schedules:

“Exhibit A”—Statement of Resources and Liabilities, at December 31st, 1911.

“Schedule I”—Accounts Receivable.

“Schedule 2”—Accounts Payable.

“Exhibit B”—Statement of Income and Expenditures, for the year 1911.

“Exhibit C”—Statement of Departmental Purchases and Consumption by Institution, of Farm, Garden and Dairy Products, same being additional toward maintaining the Institution during the year.

“Exhibit D”—Statement of Surplus reverting to State, at December 31st, 1910, with adjustments, during the year.

“Exhibit E”—Statement of Per Capita, Average Number Patients, Average Daily and Monthly Expenses, etc., figures based on actual cash expended out of appropriations, and other cash receipts during the year.

“Exhibit F”—Cash, Expended out of Appropriations, and other cash receipts during the year; total amount paid during the year to each creditor of the Institution.

In compliance with the law, duplicate voucher-checks with duplicate invoices attached, representing all paid purchases during the year; also the required monthly certificate of expenditures, approved by yourself, and audited by the Board of Trustees, have been filed in the Executive Department, Atlanta.

I have devoted my entire time, as required by the rules to the Steward's work, and have to the best of my ability discharged the duties incumbent upon me.

Respectfully submitted,

L. J. LAMAR, Steward.

Mr. L. J. Lamar, Steward.

Dear Sir—Above I hand you my report for the fiscal year beginning January 1st, 1911, and ending December 1st, 1911.

Very respectfully yours,  
W. H. HUNTER,  
Storekeeper.

### Report of Engineer.

Milledgeville, Ga., Jan. 1st, 1912.

Dr. L. M. Jones, Superintendent.

Dear Sir—I have the honor to submit herewith my report of the workings of the Engineer's Department from Jan. 1st, 1911, to Jan. 1st, 1912.

Respectfully,

T. H. DeSAUSSURE,

Engineer.

#### Improvements.

The old wooden headboards marking the graves in the white cemetery having become much decayed through the lapse of time, it was found necessary to renew them. This has been done, using plain castiron headboards having the necessary raised numerals cast upon them in the place of the old style wooden ones. Twenty-two hundred and eighty-five of these headboards have been placed in the white cemetery, and the work of renewing those over the negroes is being carried forward at the rate of four hundred each month.

The six water-closets and bath rooms on the 21st, 22d and 23d female wards have been thoroughly overhauled, new floors and wood ceilings being put in and the walls scraped and painted. Six new adamantose water-closets and one bath tub were put in these rooms and the old tubs reset; all piping, both soil, hot and cold water being renewed.

Three new adamantose water-closets have been put in the day rooms of the 1st, 2d and Infirmary wards, a corner of the room being cut off by a wooden partition for enclosing same.

A spray bath has been put in on "B" white male ward and another on the 4th negro female ward. In each case three small rooms have been taken for the purpose, connection being made between them by arched ways cut through the partition walls. The spray bath occupies the entire middle room of each set, a line of four spray heads being set

across the width, with side rails at waist height under them to keep the bathers in line under the sprays. The other two rooms of each set are used for undressing and rub down purposes. The wooden floors of these rooms have been taken out and replaced with reinforced concrete ones having a cement top dressing and baseboard, and having also a central drain trapped to the sewer.

The year 1910 having been a very dry one the water in the pond supplying the colony became very low and unfit for use, and it was decided to raise the dam two feet and nine inches higher and so increase the supply of available water when the winter's rains came. This work has been done entirely by patients working under the direction of employees of the Institution. But the winter's rains did not come in sufficient quantity to fill the pond and in consequence there was a shortage of water in the pond during the summer; and a spring near the head of the pond was dug out and a brick curb 10 feet in diameter and 7 feet deep put in over it. A small house 8x20 feet was built nearby and a gasoline engine and pump bought and set up in it, the piping being connected to the main pipe line from the rams by twelve hundred and twenty-five feet of 2-inch pipe. This spring furnished an ample supply of water for the colony until the fall rains filled the pond.

The front wing of the 21st female ward, 130 ft. long, has been renovated, new floors being put in throughout and wood ceiling put in over the hallways. The plastering of the side walls of the entire wing and that of the ceilings in the rooms have been scraped and painted. The old cement baseboards have all been removed, and the side walls plastered down to the floor line. The old accumulation of paint has been removed and the woodwork repainted and finished in white enamel. The floors have all been stained and waxed.

The front wing of the Infirmary has been done over; the walls being painted, the woodwork given two coats of white enamel, the room floors stained and varnished and the corridor floors stained and waxed.

Floor plans and estimates have been made for the following new buildings—

- A hospital for the acute insane.
- An annex to the negro building.
- A building for feeble-minded children.
- A building for white female nurses.
- A tuberculosis ward for white females.
- A tuberculosis ward for white males.
- A boiler room with brick chimney, and a kitchen for negro building.

A new floor has been put down in the vestibule between the 21st female ward and the center building, and the plastered ceiling replaced with one of wood. The side walls have been scraped and painted.

The plastered ceiling in the day room between the Infirmary and the 9th ward has been replaced with wood ceiling which has been painted.

About three-fourths of a mile of the pipe line from the waterworks to the Sanitarium is run through bottom land which was quite water soaked and soft at the time when the pipe was laid. On account of unequal settlement of the pipe in this soft material there have been a good many leaks through the joints along this part of the line at different times. As this part of the line is subject to overflow and is inaccessible at such times, and as all of the settlement which is likely to occur has taken place; we have dug down to each joint and recalked it in order to safeguard against any leaks at a time when we could not get to the line on account of high water.

A porcelain water-closet and an enameled iron bath tub have been placed in one of the rooms on the second floor of the central part of the Green Building.

All the tubes in No. 1 boiler at the Green Building have been replaced with new ones, the old tubes having become defective through "pitting;" and ten tubes have been removed in the No. 1 boiler at the Powell Building for the same reason.

The platform at the Store House, both on the Georgia and on the Central of Georgia Railway tracks have been renewed throughout with as nearly all-heart long leaf yellow pine lumber as it was possible to get. Ten thousand, four

hundred feet was used in this work, all of which was given two brush coats of creosote.

The steps and floors of both porches at the Twin Building have been renewed and painted.

All of the tin roofs, 3,192 squares, have been painted.

The 14th and 27th wards have been resingled. The work required 92,000 shingles.

Two rooms have been fitted up in the basement of the Powell Building for use as class rooms for the nurses Training School. The floors have been repaired and the plastered ceiling which was in tatters was replaced with a wooden one which was painted white. Thirteen electric lights were installed, all of the wires being run in iron conduit.

The windows of the operating room in the Powell Building have been screened against flies and a coarser and stronger wire netting put on the outside to protect the plate glass windows against stones thrown by patients in the yard.

Work has been begun on the improvements to the kitchen and boiler room at the negro building, on the enlargement and improvement of the operating room at the Powell Building, and on the second pavilion for white tubercular females.

Besides the ordinary repair work of the Institution the following articles have been made and repaired in the several shops:

#### Carpenter Shop, 1911.

4 Coal Frames.	4 Long-handles for dusting
51 Double Top Tables.	Brooms.
17 Large Tables.	3 Cone Rims.
1 Small Table.	6 Bread Paddles.
1 Examining Table.	11 Voucher Boxes.
4 Double Tables.	2 Cart Bodies.
5 Sink Tables.	1 Organ, crated.
1 Large Dining Table.	1 Elevator Gearing Box.
1 Drop Leaf Table.	1 Medicine Case.
1 Double Sink Table.	3 Wagon Bolsters.
88 Table Legs.	18 Wall Blocks.
1 pair Double Gates.	9 Cross Arms.

2 Vestibules Refloored.	36 Panels Fence.
2 Halls Refloored.	1 Gate.
1 Room Ceiled Overhead.	12 Brackets.
1 Hall Ceiled Overhead.	1 Wagon Body.
1 Vestibule Ceiled Overhead.	1 Cross Bar.
1 Portico Ceiled Overhead.	2 Testic Racks.
50 Scrubbrush Handles.	5 Circle Screens.
6 Wagon Seats.	Closet and Shelves put in Sew-
75 Shade Sticks.	ing Room.
1 Trapdoor.	1 Ox Wagon Tongue.
8 Fly Traps.	3 Double Ox Yokes.
200 Bedsteads.	1 Spoke in Wheel.
4 Porches.	1 Wagon Tongue.
4 Wash Tubs.	14 and 27 F. Wards Recovered.
2 Porches Refloored.	1 Guinea Pig House.
1 Ice Box.	1 'Phone Pole.
16 Hoe Handles.	12 Door Frames.
1 Chest.	24 Window Frames.
24 Knobs for Iron Beds.	3 Jacks for Automobiles.
1 Pair Steps.	1 Litter.
4 Handles to Soldering Irons.	2 Centers.
12 W. W. Brush Handles.	514 Coffins.
26 Covers to Slop Barrels.	196 Boxes for Shipping Coffins.
1 Pump House.	

### Tin Shop, 1911.

2 Steamers.	510 Ft. Eave Trough Put up.
6 Cracker Boxes.	90 feet, 3 inches Conductor pipe
1 Trash Can.	put up.
1 2-gallon Milk Can.	328 feet, 4 inches Conductor Pipe
5 Sqrs. Roofing Put on.	put up.
4 1-gallon Feed Cups.	48 feet, 4 inches Sq. Conductor
2 3-quart Coffee Pots.	Pipe put up.
4 Gravy Strainers.	34 Milk Shakers.
76 Tin Pitchers.	3 One-gallon Buckets.
6 Meal Boxes.	1 18-inch Reflector.
1 Colander Dipper.	2 Half-gallon Coffee Pots.
2 Half-gallon Buckets.	1 Guano Horn.

2 Drip Pans.	1 Two-gallon Can.
13 Milk Pans.	2 Pie Pans.
54 Dish Pans.	1 Pan 30x26x2, for Ice Box at Colony.
4 Half-gallon Milk Cans.	1 Pint Measure.
1 8-inch Funnel.	12 Sugar Scoops.
1 Two-gallon Coffee Pot.	1 Box for Chicken Feed.
3 One-pint Coffee Pots.	2 One-gallon Oil Cans.
2 Small Pans.	6 Fly Traps.
1 Pint Measure.	1 Sink, lined.
1 Quart Measure.	1 Scale Pan.
85 Feet 20-inch Box Valley put up.	

### Furniture Repair Shop, 1911.

2,164 Chairs Repaired.	1 Operating Table Upholstered.
242 Tables Repaired.	10 Sets Harness Repaired.
188 Dressers Repaired.	7 Chairs Upholstered.
227 Tables Varnished.	2 Lounges Upholstered.
350 Shades Repaired.	Shelves put in China Closet.
432 Shades Put up.	150 Chairs Varnished.
9 Collars Repaired.	7 Carpets put down.
12 Lines Repaired.	14 Wires put on Bedstead.
Linoleum Repaired on Halls 1, 2, 3, 5, 22, 23.	2 Harness Tugs.
Linoleum Put Down on Halls 1, 2, 3, 22, 24, 33, 34.	1 Cane Back put in Chair.
111 Cane Seats put in.	5 Pairs Traces Repaired.
458 Wooden Seats put in.	121 Dressers Varnished.
92 Leather Seats put in.	6 Bedsteads Repaired.
26 Mirrors put in Dressers.	6 Bedsteads Painted.
16 Brass Knobs put on.	1 Medicine Case Made.
23 Back Straps made.	10 Safes Repaired.
127 Hame Strings made.	9 Safes Varnished.
9 Bridles Repaired.	9 Lounges Repaired.
105 Curtains put up.	4 Bed Springs Repaired.
	14 Harness Snaps put on.
	1 Carpet Repaired.

### Farm Steward's Report

Near Milledgeville, Ga., Jan. 1st, 1912.

Dr. L. M. Jones, Supt., Etc.

Dear Sir—I herewith hand you my report as Farm Steward for the year 1911 of the farm, garden and dairy, the farm garden and pork is consolidated, the dairy still kept separate and reported so, the transportation account has been rendered to the bookkeeper monthly, and the Farm Steward's inventory for the 1st day of Jan., 1912, also turned over to him. We have received from the chicken yards during the year 3,101 $\frac{1}{4}$  dozen eggs—at market price would amount to \$620.25, and 552 pounds of turkeys, \$82.80.

Very respectfully,

GEO. W. HOLLINSHEAD,

Farm Steward.

# Report of Matron

Milledgeville, Ga., Jan. 1st, 1912.

Dr. L. M. Jones, Supt, etc.

Dear Sir—With thanks to the officers and to my co-workers who have in any way aided me, permit me to submit the enclosed as my report from Jan. 1st, 1911, to Jan. 1st, 1912.

I would add that all repairing has been done for the institution, and all scraps and remnants put to a good use. and have been properly accounted for through Storekeeper's office.

Respectfully submitted,

MRS. J. M. DARNELL,

Matron.

### Report of Chaplain

Milledgeville, Ga., Jan. 1st, 1912.

To the Trustees of Georgia State Sanitarium:

Up to November 1st, 1911, I served as Chaplain to the State Sanitarium. Conducted the chapel services each Sunday afternoon. The inmates attended well, and seemed attentive and appreciative. I also attended all funerals when so ordered by the Superintendent.

Respectfully submitted,

J. F. SINGLETON.

# **The Sixty-Ninth Annual Report of the Board of Trustees of the Georgia State Sanitarium.**

---

Milledgeville, Ga., January 1, 1913.

To His Excellency, Joseph M. Brown, Governor.

Sir: The Board of Trustees of the Georgia State Sanitarium as required by law respectfully makes report herewith of its stewardship as to the conduct and management of this institution for the year ending December 31, 1912, the sixty-ninth year of its existence.

Quarterly meetings of the Board and monthly meetings of its committees have been held at the Sanitarium throughout the year, and the work of the management closely supervised. The funds of the State have been carefully expended. Supplies were brought as heretofore upon competitive bids from samples submitted. The welfare and happiness of the stricken ones in its charge have had the constant thought of the Board.

An effort has been made to alleviate the hopeless condition of the feeble-minded children found among the patients by such limited training as the facilities of the Sanitarium admit, from which gratifying results are already had. The success of this effort justifies the renewed plea made in this report in behalf of these unfortunates.

The Board earnestly bespeaks the careful attention of your Excellency to the recommendations with which this report is closed. The sound reasons upon which they are based are briefly stated in each case. Their importance, especially those dealing with increased accommodations for the colored insane, and a hospital for recent and acute cases of insanity, are such as to demand the prompt attention of the General Assembly.

The essential features of the year's work are now briefly set out.

### Patients.

The year closed with 3,429 patients in the Sanitarium. The number of admissions for the year was 1,108. The daily average under treatment was 3,424 as against 3,383 in 1911, an increase of 41 patients. The daily average for the past five years shows an annual average increase of 89. The total number receiving treatment was 4,527.

It may reasonably be expected that at the present rate of growth ten years hence will see the daily average raised to 4,500 patients. More room will soon be required for white females, and is now needed for the colored patients.

Included in the admissions for the year are eleven criminals escaping trial for crime by the plea of lunacy, three of whom were found sane.

### Finances.

The report of Steward Lamar is the second to be made for a whole year under the present system of accounts. The products of farm, garden and dairy are taken into consumption at a fair valuation, and under the skillful direction of Farm Steward Hollinshead, a substantial contribution to the support of the Sanitarium is thus made. A small quantity of cotton is grown for mattress making, but in late years it has been found more profitable to sell the cotton and buy linters for this purpose. The demand of the culinary department for fresh vegetables grows larger all the while and plans are now under way for increasing the supply. The farm is located four miles away from the Sanitarium, and on it are employed the able bodied among the convalescent colored male patients. It is of more than passing interest to note the wholesome effect of such outdoor employment on their mental as well as physical health, no small number of recoveries coming from their number.

Exhibit A of this report sets out the resources and liabilities at the close of the year, and a gain of \$3,205.66 is noted in the surplus carried over as compared with the previous year.

The net cash balance on hand after deducting the deposits of patients is \$23,800.98, against which the Sanitarium is due for accrued salaries and wages, and for supplies the sum of

\$25,173.55, leaving an apparent overdraft for the year of \$1,373.57.

Exhibit B sets out the total institution income and expenditures, and from it, as from the same Exhibit for 1911, is condensed the following comparative statement:

### Institution Income.

	1911	1912
State Appropriation .....	\$465,992.00	\$530,000.00
Surplus of supplies, farm products and cash from previous year .....	49,974.55	68,579.45
Farm products .....	51,969.50	58,747.94
Farm products sold .....	4,238.91	520.09
Cotton and seed on hand unsold.....	.....	4,052.33
Board of officers, etc.....	2,503.01	2,641.23
Sundry materials sold .....	1,139.53	1,197.34
Live stock increase .....	1,524.63	.....
Total.....	\$577,342.13	\$665,738.38

### Institution Expense.

	1911	1912
Supplies, etc. ....	\$302,051.53	\$327,154.08
Salaries and wages .....	169,931.35	204,125.21
Farm products consumed .....	36,779.80	62,673.98
Adjusting entries, Exhibit C .....	.....	121.09
Total.....	\$508,762.08	\$594,074.36
Excess of income over expense.....	68,579.45	71,664.02

This excess of income over expense is held in the following forms for the two years as above:

	1911	1912
Live stock, etc. ....	\$ 19,300.41	\$ 19,597.31
Farm products .....	15,189.70	15,315.99
Farm supplies .....	2,719.21	4,350.80
Subsistence supplies .....	17,777.43	18,449.87
Engineer's supplies .....	9,383.86	7,586.03
Fuel .....	8,509.97	7,052.85
Cash and cash items .....	20,655.81	29,147.24
Total .....	\$ 93,536.39	\$101,500.09
Less reserved for deposits due patients, accrued salaries and wages, for supplies bought, etc...	24,956.94	29,836.07
Net balance.....	\$ 68,579.45	\$ 71,664.02

The medical attendants and nurses were granted a well-deserved increase of pay at the beginning of the year ranging in amount from \$2.00 to \$5.00 per month each, and this necessary action of the Board added approximately \$25,000.00 to the year's expenses.

The per annum cost to the State for each patient was \$153.06 as against \$139.88 in 1911, an increase of \$13.18. Of this increase approximately \$6.50 is due to the increase of wages just noted, the balance is mainly in the cost of supplies and in the many incidental repairs and improvements set out in the Engineer's report.

The per diem cost per capita was \$0.4182.

### **Repairs.**

The great extent of the physical property owned by the Sanitarium is well shown in the accompanying bird's eye view. Its upkeep is an expense which must constantly increase with the age of the buildings. The Superintendent's report calls attention to several repairs urgently demanding attention, and which the Board has thus far from lack of funds been unable to reach. Among them will be noted the enlargement of the laundry now inadequate to perform the work required of it, the replacement of rotten plaster now constantly falling to the danger of the inmates, the substitution of waterproof floors for rotten, decaying wood floors in 134 bath-rooms and the completion of the unfinished wing of the twin building now required for white male patients. Such work comes under the supervision of Engineer DeSaussure, and his report shows the work accomplished by him. The larger items therein are the completion of the renovation of the kitchen attached to the building for the colored patients, the installation of new boilers therein, the erection of two frame pavilions for tubercular patients and a frame cottage for the use of one of the officers. Work on the water storage reservoir is now under way, and as is the custom with all such work, patient labor is being used as far as possible to reduce the cost.

### **Medical Work of the Year.**

The very full and interesting report of Clinical Director Green gives the history of a busy year for the Medical Staff.

The number of patients receiving treatment in the year reached a total of 4,527 as contrasted with 4,411 in 1911. The high death rate is attributed mainly to pellagra and tuberculosis, and to the number of patients sent to the Institution in the last stages of chronic diseases. The Clinical Director reports it not an uncommon thing for patients to be brought in in such feeble condition that death is often but a matter of a few hours or days. In this connection attention is directed to the table of deaths presented in the report. The increase of those due to pellagra is alarming. The death rate among the negroes is very high due in part to their dangerously overcrowded accommodations. No serious epidemic of sickness occurred in the year. The addition of two tubercular pavilions during the year has enabled the Staff to give proper treatment to such cases. One homicide and two suicides occurred, particulars of which are given in his report. Practically all of the 1,108 new patients received were passed before the Staff for diagnosis, 586 of them being found to offer no hope of recovery. The best efforts of the Staff were exerted for the hopeful ones, every facility at its disposal being used. The poor results shown in this direction are not to be attributed wholly to the Staff. Time and again the reports of the Board have laid emphasis on the dual responsibility of the Sanitarium. It must not only serve as an asylum for the hopeless or chronic insane, but also as a hospital for the treatment and cure of insanity. Unwisely its doors have been opened by law for the admission of sane epileptics and feeble-minded children for the proper care and treatment of whom it is not equipped. It is burdened too with the support of a number of harmless paralytics and senile imbeciles, many of whom are not dangerous to society. It is also called upon to care for the criminal insane, that is, those persons who on plea of insanity escape trial and punishment for crime. Apart from the injustice of compelling the innocent insane to associate with such criminals, it should be well remembered the Sanitarium is in no sense a prison, and has no way of preventing the escape of such persons. The necessity of providing for these various classes is a heavy drain on its resources, and cripples its usefulness to the insane for whose care and treatment it was primarily designed. The great mission of the Sanitarium

should be the treatment and cure of insanity, and its every need in this direction should be liberally supplied. A completely equipped psychopathic hospital should be at the disposal of the Staff for the scientific care and treatment of the recent and acute cases of insanity. Appropriations for its support should be sufficiently liberal to enable the Board to employ the best talent obtainable to this end. The Board lays this urgent need before your Excellency, and urges favorable consideration of its recommendation thereon.

The Training School for Nurses continues in successful operation and has graduated its first class. Perhaps no single innovation in recent years has been so productive of good results as this one. The first of such results is noted in the ease with which vacancies in the nursing force are now filled. The School is under the immediate care of the capable Superintendent of Nurses, and her report shows the work done by it.

### **Sane Epileptics.**

The law provides for the admission of epileptics to the Sanitarium without reference to their sanity. It appears therefore that a sane person who happens to be so afflicted can be legally committed to it, and thus is brought about the enforced association of sane persons with the insane, a condition which can only be productive of harm to each. No class of the afflicted is more to be pitied, for this disease by its repulsive outward manifestations bars every door to them. They are indeed proper subjects for custodial care, but it should not be given them in a hospital for the insane. On the contrary they should be segregated in a colony where under competent medical supervision they can be employed in the open, and so given the one chance left them for recovery. Those cases in which the disease has resulted in insanity are of course proper subjects for the care of the Sanitarium. A knowledge of the injury done those in whom rests a small hope of cure causes the Board to make this statement to your Excellency. It will be glad to see an epileptic hospital founded by the State, and would renew the suggestion of a previous Board that in memory of the late Dr. Powell it be called the "T. O. Powell Hospital for Epileptics," as a recognition of his long and dis-

tinguished service to humanity and the State. He was an earnest advocate for the establishment of such a hospital.

### **Feeble-Minded Children.**

The Board very earnestly directs the attention of your Excellency to the absence of any provision in the educational system of the State for her feeble-minded children, approximately one hundred of whom are in the Sanitarium. Generous provision has been made for her blind and for her deaf and dumb children, but beyond providing for their commitment to the Sanitarium nothing has been done for the feeble-minded. Nor is this condition peculiar to Georgia, since of the Southern States only Kentucky and Virginia have recognized their duty to these unfortunates. Many of this class are capable of such training as will add to their happiness, and enable them to contribute to their own support. Their sequestration is highly essential to the best interests of society, but justice and humanity alike demand they be thus sequestered in an institution planned to meet their peculiar needs, and not in a hospital for the insane. Such an institution will provide not only for their physical needs, but will give them such mental and manual training as they can receive. When thus trained their self-helpful employment should be directed to their own support, a matter of importance, since the most of them must remain thus sequestered, a charge upon the State for life. Only the grosser types find their way to the Sanitarium, and the small number in it by no means represents the total number in the State.

The feeble-minded have so few needs in common with the insane, and their enforced association is so detrimental to each class, that their further commitment to the Sanitarium should be stopped and proper provision at once made for them.

### **RECOMMENDATIONS.**

#### **Support and Maintenance Funds for 1914 and 1915.**

The Board estimates that the Sanitarium will be called on to provide for 3,629 and 3,729 patients in the years 1914 and 1915. In order to give them the proper care and treatment, and at the same time keep the immense property of the Sani-

tarium in good repair, it believes an allowance based on 50 cents per day for each patient to be none too much for the best results, and its calculations are therefore made on this basis. It recommends an appropriation for this purpose for 1914 of \$644,042.50, and for 1915, \$662,292.50.

### **Accommodations for the Colored Insane.**

The last report of the Board called attention to the dangerously crowded condition of the negro building into which 1,011 patients are now packed. The Sanitarium Committees of the General Assembly visited the building last year and verified the report. The recommendation of the Board in the matter was unheeded, and a condition then bad has grown intolerable. The sanitary condition of the building so heavily overcrowded is a serious menace to the health of the inmates, and will be apt to cause an already high death rate to grow higher. Engineer DeSaussure, after a careful study of the situation, advises the Board that the most economical way of supplying more room is by the erection of an annex to the present building which will enable it to be served from the same kitchen and heating plant. The Board would like to have included in such annex an amusement or recreation hall for the use of the convalescent patients. The cost of such an annex, carrying an amusement hall and made to accommodate 300 patients is estimated at \$100,000.00, and an appropriation in this sum is recommended.

### **Hospital for the Acute Insane.**

Hope for recovery rests only in the recent and acute cases of insanity, and it is of the utmost importance to their recovery that they be not forced into association with the hopeless, chronic insane, lest the depressing influences of such association destroy all hope of cure. Their surroundings should be cheerful, their attention and food the best, and the scientific equipment for their treatment modern. The well-crowded condition of all the Sanitarium buildings precludes any possibility of separating such patients or of setting aside any one of them to this use even were it otherwise suitable. The need is keenly felt by the Staff, is so urged by humane and economic reasons

that the Board earnestly renews the recommendation contained in its last report that the sum of \$135,000.00 be appropriated to the use of the Board for this specific purpose, this being the careful estimate of the Engineer of the cost of a suitable building fully equipped and furnished.

### **Nurses' Home.**

Much is demanded of the faithful women who constitute a large part of the nursing force of the Sanitarium. Their duties are very trying at times, and worn and exhausted as they frequently are, their only chance to obtain rest and sleep is in the wards on which they are located when on duty. Those familiar with insane hospital conditions will readily appreciate that there are many times when either is hard to obtain. The Board believes their work entitles them to the consideration of the State, and that such consideration will result in better service, and so is constrained to ask an appropriation in the sum of \$40,000.00 for the erection and furnishing of a Nurses' Home for the use of such nurses when off duty. The Engineer estimates that this sum will be sufficient for such purpose.

### **Recommendations as to Laws.**

In the judgment of the Board for reasons given in each case certain changes in the laws governing the Sanitarium are essential and are recommended as follows:

First. Amended so as to prohibit the further commitment to the Sanitarium of epileptics not insane, feeble-minded children, harmless seniles and paralytics, and persons escaping trial for crime by plea of lunacy. The first and second of the classes named are not insane, and should be placed in institutions adapted to their treatment and education. The third and fourth classes can not be benefited by Sanitarium treatment. The last named class ought to be placed where they can be kept in secure confinement. The Sanitarium is a hospital and not a prison.

Second. Amended so that the three nearest adult relatives with the consent of the Ordinary may waive the present required ten days' notice of a trial for lunacy. The purpose of such amendment is to avoid the jail confinement which fre-

quently falls to the lot of these stricken ones, and so permit them to be placed under treatment at once.

Third. Amended so that any person who shall abandon a patient on the Sanitarium grounds without the Superintendent's permission shall be arrested, tried and punished as for a misdemeanor in the courts of Baldwin County having jurisdiction in criminal cases. The purpose of this amendment is apparent.

Fourth. Amended so as to give the Board power to fix the salary of the Superintendent and resident physician, as well as the salary of the assistant physician. The present salary of the first named officer was fixed in 1866, when but 299 patients were in his care. The Board believes his salary should be commensurate with his responsibilities, and sufficiently large to attract the ablest talent to it as occasion may arise.

Fifth. Amended so as to abolish the office of Treasurer, and to authorize the Board, with the approval of the Governor, to appoint a bank or banks of deposit as the custodian of Sanitarium funds. The office is obsolete and no longer required, and the change will enable the Sanitarium to receive interest on its money.

Sixth. Amended so as to authorize the Board to employ a legal adviser as occasion may require.

Seventh. Amended so that nine members shall constitute the Board of Trustees of the Sanitarium; that at the first appointment three shall be appointed for two, three for four and three for six years; and thereafter three shall be appointed every two years. The growing size of the Sanitarium, and large sums of money needed for its support makes it a matter of business prudence to avoid placing its affairs in the hands of inexperienced men with each change of administration.

Eighth. Amended so as to change the name of this institution from the Georgia State Sanitarium to the Georgia State Hospital for the Insane. The new name will more clearly indicate its functions, and at the same time differentiates it from the other State Sanitarium now existing in the State.

Ninth. The enactment of a sterilization law applying to certain classes of criminals and defectives modeled after recently enacted laws in the States of New Jersey and Indiana.

### **Superintendent and Staff.**

The active management of the Sanitarium rests in the hands of Superintendent Jones, and to him must be given full credit for the successful conduct of its affairs throughout the year. The commendations of the Board are likewise due his heads of departments, namely, Clinical Director Green, Steward Lamar, Engineer DeSaussure, Farm Steward Hollinshead and Superintendent of Nurses Miesse, as well as to their assistants, for the satisfactory nature of the work done under and by them. The Board realizes, as does the Superintendent and members of his Staff, that the Sanitarium has not yet reached its maximum of efficiency, but in common with each of these officers, and having faith in their ability, it looks forward with confidence to a time when with bettered equipment and more liberal support a greater number of cures of insanity can be reported.

### **In Conclusion.**

The Board sincerely thanks your Excellency for the sympathetic support given it in the discharge of the duties placed in its hands, and ventures the hope its actions therein may have your approval.

By order of the Board of Trustees.

JNO. T. BRANTLEY, President.

RICHARD JOHNSON, Secretary.

## Report of Superintendent.

For the Year Beginning January 1, 1912, and Ending December 31, 1912.

---

Georgia State Sanitarium, January 1, 1913.

To the Honorable Board of Trustees,

Georgia State Sanitarium.

Gentlemen:

I respectfully submit for your official consideration the Sixty-ninth annual report of this Institution for the year ending December 31, 1912.

On January 1, 1912, there were patients on hand, white and colored, 3,419. Received during the year, 1,108. Total number under treatment, 4,527. Net increase for the year, 10. Number of deaths, 620. Number discharged, 478. Percentage of recoveries and improved based on number received, 30.5. Percentage of deaths based on total number under treatment, 13.69. On hand January 1, 1913, 3,429.

Expenses for whole institution, daily, \$1,432.11; weekly, \$10,024.77; monthly, \$43,679.50; for the year, \$524,154.06. Our appropriation for the year was \$530,000.00.

Our per capita was a few cents above that of last year, owing to the increased cost of living, and the amounts we had to use in improving the negro kitchen, putting in new boilers, etc., putting up two new pavilions for tubercular patients, and building a cottage for Dr. Walker.

The kitchen at the negro building as remodeled and enlarged with new boilers, new Petersen oven, new cooking utensils, cement floor, etc., is a thing to be proud of.

It is said that it is the best kitchen we have now, and that better cooking is done there than at any other kitchen.

The two new pavilions, one for white males, and one for white females, are quite an improvement over those formerly built.

It is rather discouraging to have to repeat the necessity of improving the physical condition of the old buildings and to add new ones, but I feel it my duty to call your attention to these matters, and let us continue our requests to the Legislature until we get what is needed for the successful management of this, the most dependent charge upon the State. The inmates here are as dependent and as helpless as babes. Unless the State provides means for their support and comfort they are compelled to go without.

Our laundry is totally inadequate for the amount of work that is needed to be done to keep clean linen for this great number of helpless people. It needs to be enlarged, and a great deal of new equipment added in order that the work may be done promptly and properly.

The estimated cost made two years ago by our Engineer is \$6,240.00.

Estimated cost to enlarge the general storehouse, which has not sufficient room to hold the goods that have to be stored away for a month's supply, is \$2,651.00.

There are about 134 bath-rooms in the Institution which need to have the old unsanitary, ever wet and decaying board floors removed, and concrete floors substituted. Estimated cost, \$7,885.00.

Much of the plastering overhead in the old buildings has become rotten, and it is constantly falling. It is useless to replace it with new plastering, for it soon becomes detached and falls. Board ceiling should be substituted. Estimated cost, \$9,005.00.

One wing of the twin building has never been finished, and we need the room. Estimated cost, \$8,000.00.

Additions to the negro building is a pressing necessity. We are overcrowded in this department, and should have additional room to accommodate three hundred patients. Estimated cost, \$100,000.00.

We have certain wards set apart for the reception of new cases, and while we are doing the best work possible in such quarters, it would be greatly to our advantage to have a separate building for all acute cases. This building would give us more room, which we are beginning to need very much in the white female department. Estimated cost, \$135,000.00.

A Nurses' Hall is very much needed. We have nowhere for them to sleep save on the wards where the patients sleep, and frequently they get very little rest owing to the noise kept up during the night by the patients. Then they have no place for assembling or recreation when not on duty. Very few institutions of this kind are without these accommodations. Estimated cost, \$40,000.00.

These amounts may seem large in addition to the regular appropriation for maintenance, and if all should be made at once would fall rather heavily on the State. In lieu of these several amounts if we could get fifty cents per capita, I feel that we could reasonably hope to gradually make all needed improvements, and put up the necessary additional buildings.

### **Training School.**

I am happy to report the successful ending of the two years course in the training school last October. It was a great disappointment to me not to be present at the Commencement exercises. Owing to continued illness I was forced to seek relief at Johns Hopkins Hospital; hence, my absence.

The programme consisted of an address by Hon. H. H. Dean, member of our Board of Trustees; presentation of diplomas by Hon. Jno. T. Brantley, President of the Board; presentation of Class pins by Dr. Thos. R. Wright, also member of the Board of Trustees, music, refreshments, etc.

The following members of the Senior Class received diplomas and Class pins, viz: Miss Annie T. Athon, Miss Ora A. Barnett, Miss Willie D. Geiger, Miss Alice M. Vaughn, Miss Vallie Badger, Miss Emma Layfield, Miss Alma E. Snipes, Mrs. Lula Futral, and Mr. Robert A. Taylor.

It gives me pleasure to say that every member of the graduating class continues in the service of the Institution except Mrs. Futral, who was obliged to leave on account of failing health. These graduates have been placed in charge of our sick and infirmary wards, reception wards, etc., and are giving us valuable service. One of the graduates, with two assistants from the Senior Class, has been placed in charge of the sick ward in the white male department, and one with three assistants in charge of three infirmary wards of the white male

department, all on one floor, where they can overlook the feeble and bed-ridden old men. Of course they have male attendants to attend to the bathing, etc. We have diet kitchens on these wards, where delicacies can be prepared for the sick and feeble. The service in these departments has been greatly improved in every respect.

Mr. Taylor, the male member of the graduating class, has been put in charge of the sick and infirmary wards of the colored male department. We already had a colored female trained nurse on the colored female department; so I feel that we are better equipped for nursing our sick than we have ever been.

We are indebted to the physicians for their faithful service in lecturing the class, and aiding them in every way possible to fit them for the noble calling they have chosen.

Miss Mae Miesse, as Superintendent of Nurses and the Training School, has rendered faithful service, and her work is highly appreciated.

### **Employment and Amusements.**

Basketry, needle work, sewing, helping to keep the wards in order, attending to the meals, etc., has been done by the white females, while a good many of the colored females assist in the laundry, as well as in keeping the wards in order, sewing, etc.

The white males assist in the dining-rooms, ward work, kitchens, caring for the chickens, cleaning up the yards, gardening, repair shop, etc., while the colored males assist in ward work, kitchens, dining-rooms, scavenger work, cutting wood, grading, farming, dairy, etc.

### **Amusements.**

In addition to the dances, games, etc., we have had the Victrola and band concerts on the lawn in good weather, and in the hall in inclement weather. We mentioned the fact in our last report that the officers had formed a band association, and were soliciting funds with which to purchase instruments for a brass band. It gives me pleasure to state that they were successful in getting enough money to purchase the instru-

ments, and an instructor was employed last April. A class of about twenty was selected from among the employes, and within a short time they had made such progress as to be able to give concerts, which we are having regularly once a week. Every one appreciates this addition to our list of amusements.

During the Christmas holidays Mr. Edmond Reid, proprietor of the moving picture theater in Milledgeville, very generously came out with his outfit one afternoon, and gave us quite a treat showing his pictures. The hall was crowded to its utmost with patients, and the show greatly enjoyed and appreciated by all. Many thanks to Mr. Reid.

### **Clinical Director.**

Dr. E. M. Green, our Clinical Director, has given his full time to the Medical Department, holding Staff meetings daily, at which all new cases received are brought before the Staff for examinations, discussions, diagnosis, etc. The physician in charge of such cases has an anamnesis of his findings, both mental and physical, which is read and conclusions arrived at from these findings. A complete record of these cases and all subsequent notes are carefully kept on file for any future reference that may be wished to be made. You will find in his report a full account of receptions, discharges, physical as well as mental diseases, percentages of recoveries, deaths, etc. Dr. Green has been painstaking in this work, and given the Institution valuable service.

The Sanitarium Medical Society, composed of all the members of the Staff and medical internes, has held meetings monthly, at which time a paper has been read and discussed. We consider this a valuable feature of the work being done in the medical department, and would recommend that all papers prepared and read at these meetings be published in pamphlet form for distribution.

The Steward's report shows in detail the receipts and disbursements of all funds. Your Executive Committee continues to purchase supplies quarterly, one-third of which is delivered monthly. Lists of such supplies as are needed are sent to prospective bidders, and samples are required to be furnished, and the lowest bidder, quality considered, gets the contract.

All goods bought and delivered are subject to our weights and measurements.

The Farm Steward's report will show what has been done at the farm (colony), in the garden, dairy, etc. Last year was one of the hardest to contend with, on account of excessive rains, that we have seen. It was impossible to give the land proper preparation before planting, and to give the crops needed cultivation. Still, we are thankful for what we made. The yield of corn was good at the colony, making more than we made the year previous. Oat crop was good; more than usual. Potato crop very good, and they have kept better than usual. Melons almost a failure. Worms totally ruined the cantaloupes. Fairly good crop of peaches. The heavy rains overflowed our pastures so continuously that the grazing was very poor; consequently the dairy did not do as well as it otherwise would have done.

The hogs were nearly all lost last spring from cholera. After they began to get sick we had a State veterinarian to examine them. He advised us that they had cholera, and prescribed the serum for this disease. It was administered to all, but too late to save many. Those at the colony had not taken the disease. They were given the treatment, and none of them became sick. I am satisfied from this experience that it does no good to administer this treatment to a hog after he becomes infected. It may be a preventive, but is a very costly remedy.

The Engineer's report shows the work done in his department in the way of improvements, repairs, etc.

Mrs. J. M. Darnell, our beloved Matron, died last February after an attack of pneumonia. She had been connected with the Institution for about thirty years, and had given the best years of her life to the service of this Institution. She was always faithful and interested in her work, kind and considerate of everyone. She is greatly missed by all. Miss Mae Miesse, with an assistant in the office, has been ex-officio Matron since March, and everything in this department is working smoothly.

The report of the Pathologist will show what has been done in the laboratory. We are not able to get as many autopsies as we should have, on account of so many people being prejudiced against work of this kind. Many cases of difficult diag-

nosis can be cleared up only by an autopsy, but as we have no legal authority to perform them, we never do them without the consent of relatives.

Religious services were conducted by Rev. Elam F. Dempsey, pastor of the Methodist church in Milledgeville until the first of November, at which time Rev. Mr. H. L. Jewett Williams, pastor of the Episcopal church, was elected for the following year. All of the dead who were not sent home were given Christian burial, and preaching in the chapel was had regularly every Sunday afternoon, and greatly appreciated by the audience.

The library is kept in the male convalescent building, where we have quite a good number of books, and the friends of the Institution are frequently sending nice magazines, and the press send a good many daily and weekly newspapers, all of which are appreciated and enjoyed by the inmates. Our indebtedness to these friends is hereby acknowledged.

We had no changes in our Medical Staff during the year. Dr. Kelly, one of our internes, left us early in the year, but we were fortunate enough to get Dr. Saye, who was serving an internship in the Augusta Hospital, to fill the vacancy. In October Dr. P. H. Weeks, who was serving his second year as interne, had a position offered him on the Staff of the Hospital for the Insane at Indianapolis, Indiana, and accepted, much to our regret, as he had made us a very valuable man. However much we regretted to give him up, we were glad to see him get such a desirable position.

In closing I desire to thank the officers for their co-operation in carrying on this great work for humanity; also every employe who has rendered faithful service; and to you gentlemen, I wish to express my gratitude for your universal kindness to me, and the great interest you have manifested in conducting the affairs of this Institution.

## Report of the Clinical Director.

Dr. L. M. Jones, Superintendent.

Dear Sir: I beg to offer the following report of the Medical Department of the Sanitarium for the year ending December 31, 1912:

### Admissions.

The number of admissions to the Sanitarium has steadily increased during the past five years, as is shown by the accompanying table:

Year	Number of Patients Received
1908 . . . . .	947
1909 . . . . .	973
1910 . . . . .	996
1911 . . . . .	1,064
1912 . . . . .	1,108

Of the 1,108 patients received in 1912, 908 had never previously been admitted to a hospital for the insane, while 200 had, formerly, one or more commitments to State or private hospitals of such character.

The question of alien insane, of so great importance in many of the Northern and Western States, has so far been a negligible factor in admissions to this Institution. During the past year only twelve patients, of the 1,108 received, were of foreign birth.

The number of criminals committed by order of court was notably smaller than for the previous year, only eleven such cases having been received. Seven of the number were white males; four, negro males. Three of the eleven patients were not insane. The following mental disorders were noted in the eight remaining cases:

Dementia praecox . . . . .	3
Constitutional inferiority . . . . .	2
Imbecility . . . . .	1
Imbecility with epilepsy . . . . .	1
Drug psychosis . . . . .	1
Total . . . . .	8

These individuals were under indictment for the following offences:

Arson . . . . .	1
Burglary . . . . .	3
Forgery . . . . .	1
Larceny . . . . .	1
Murder . . . . .	1
Misdemeanor (not specified) . . . . .	2
Rape . . . . .	1
Sodomy . . . . .	1
Total . . . . .	11

### Staff Meetings.

As in previous years the Staff meetings have been held daily, Sundays excepted, at 8:30 a. m. During the year 1,081 of the 1,108 patients received were presented for diagnosis before the Medical Staff. Of the twenty-seven not presented twenty-three died and four escaped within a few days after admission. One hundred and ninety-nine of these cases were before the Staff twice, and a few of them three times, while several of those admitted during the previous year appeared for special consideration.

### Anamneses.

Our efforts to secure family and personal histories from relatives of the patients admitted have not been productive of satisfactory results. Many of the patients come from remote parts of the State, and are not accompanied or visited by relatives, so that attempts to secure the desired information are necessarily confined to correspondence. Even where such information was obtained it comparatively seldom covered more than two generations. For this reason the words "for at least two generations" are used in discussing the psychoses subsequently in this report. In the negro it is rare indeed to secure any information in regard to grandparents, and as a rule, that concerning the immediately preceding generation is meagre.

### Discharges.

Explanation of the small number of patients discharged as "restored" has been made in previous reports. Several of our

classification groups, largest in point of numbers, are those in which recovery can not be hoped for. The State makes no provision for the epileptic nor the feeble-minded, consequently they swell the number of admissions to this Institution. The following tabulation will convey some idea of the ratio of incurable patients received during the year:

General paralysis .....	60
Senile psychoses .....	103
Psychoses with nervous or brain disease.....	44
Dementia praecox .....	132
Paranoic condition .....	11
Epileptic psychoses .....	94
Constitutional inferiority .....	31
Imbecility and idiocy .....	110
<hr/>	
Total.....	585

From the above it is seen that 52.8% of all admissions suffered from psychoses in which improvement, only, can be hoped for.

During the year 478 patients were discharged, most of them on the expiration of a furlough of ninety days. Their condition on discharge was recorded as follows:

Restored .....	73
Improved .....	257
Unimproved .....	140
Not insane .....	8
<hr/>	
Total.....	478

The percentage of those restored and improved based on the number of admissions is 29.7; that of restored, alone, 6.5.

### Physical Diseases.

While our records show 2,868 cases of physical diseases treated during the year, this number does not represent the actual medical work performed, as many cases reported the previous year were still under treatment, and many through oversight were not reported. A few cases of measles, mumps, and chicken pox were recorded, but there was no general epidemic of either disease as has occurred in past years.

The number of patients suffering from malarial fever was in excess of that of any previous year, being almost double the number of those so affected in 1911.

In the female department two cases of typhoid fever were reported. One of the patients was a nurse, who probably contracted the disease while away from the Institution. Six cases were reported in the negro male department.

There was a notable diminution in the number of cases of tuberculosis, as contrasted with the previous year, only 126 being recorded. The disease was recognized in seventy of these cases on examination within a few days after their admission, while in six additional cases its presence was suspected. Of the 1,108 patients received, 261 gave family histories in which tuberculosis appeared, 449 individuals being affected. Maternal tuberculosis was noted in fifty-seven of the 261 histories; paternal tuberculosis in forty; both maternal and paternal tuberculosis in six. In 226 of the whole number such a history was denied. Of the 497 patients, therefore, concerning whose relatives information could be secured, 52.5% gave a family history of tuberculosis. In 105 instances it was stated that one or more relatives suffered from cancer, the affected individuals numbering 114.

The number of cases of pellagra was much larger than in any previous year, 263 being reported. On admission the disease was recognized in ninety-one of the number, and suspected in seventeen additional instances. It appeared in numerous other cases soon after admission; the exact number is not available. In twelve cases the existence of both pellagra and tuberculosis was noted on admission.

Valvular heart disease was found in 130 of the patients received, and other organic heart diseases in twenty.

### **Surgery.**

During the year fifty-three major operations and ninety-four operations of less gravity were performed in addition to 469 minor surgical procedures. Only three patients died following operation. One of these was an old man upon whom an operation for strangulated hernia was done. Owing to his mental condition the strangulation was not complained of,

though it must have existed for some time, as the contents of the hernial sack were gangrenous at the time of operation.

Death from septic peritonitis followed a cholecystotomy. The patient was a white female in whom the gall bladder was so bound down by a mass of adhesions that it could be reached only with great difficulty.

The third patient was a white male who had sustained a compound comminuted fracture of the skull, and, though trephined promptly, never regained consciousness.

General anaesthesia was required in 140 of the surgical cases.

The results of the surgical work are especially gratifying, as all surgery is done by members of the Staff and not by consultants as is the case in many institutions, while the difficulties met with in the after treatment were frequently exaggerated by the non-cooperation of the patients, occasionally by their active opposition.

#### Deaths.

The high death rate for the past year, which is 13.6% of all cases under treatment, is attributable in great part to the increase in the number of patients suffering from pellagra, a disease in which the death rate is always high, and to the fact that so many patients in the terminal stages of chronic diseases are now sent to the Institution. It is not uncommon for patients to be brought to the Sanitarium in such feeble condition that death is evidently a matter of a few hours or days. It will be seen, by reference to Table No. XVII, that comparatively few of the deaths occurring during 1912 were due to acute diseases.

The accompanying table presents some facts worthy of consideration, in regard to the death rate for the past five years:

	1908	1909	1910	1911	1912
Total number of patients.....	4095	4085	4202	4411	4527
Total number of deaths.....	459	441	449	542	620
Percentage of deaths (all causes)....	11.2	10.7	10.6	12.2	13.6
Number of deaths from tuberculosis..	100	64	86	103	102
Percentage of deaths from tuberculosis	21.7	14.3	19.1	19.	16.4
Number of deaths from pellagra.....	23	74	84	107	124
Percentage of deaths from pellagra...	5.	16.	18.7	19.7	20.

In former years tuberculosis was recognized as being accountable for a larger number of deaths than any single disease, 21.7% of all deaths being attributed to it in 1908. There was a remarkable lowering of this ratio during the following year, at which time all tuberculous patients were removed to pavilions erected for their occupancy. This encouraging decrease in numbers was not, however, permanent, though the percentage of deaths from tuberculosis has never equaled the high mark reached in 1908. During the past year it was 5.3% lower than five years ago, but still to tuberculosis was credited 16.4% of the deaths.

On the contrary it will be seen that the percentage of deaths from pellagra has steadily advanced until in 1912 it was four times as great as in 1908, while for the past two years this disease has assumed the position formerly held by tuberculosis as being in point of numbers the leading cause of death.

Throughout the past year especial attention has been given to the treatment of these cases, but the results were disappointing. According to published reports of physicians elsewhere, the intravenous injection of salvarsan seemed to offer some hope of benefit, but though 176 such injections were given only a few of the cases appeared to be favorably influenced, and this method of treatment seems to have no advantage over others.

In one instance death was caused by fracture of the skull, the injury being inflicted by a patient, who for several years had been considered harmless.

Two white females committed suicide by hanging. One had never manifested suicidal tendencies, while the other had on several occasions threatened to end her life.

In nineteen instances the cause of death was undetermined. In several of these patients an attack of acute illness terminated fatally before a diagnosis could be arrived at, while in the greater number death occurred suddenly in patients who appeared to be in robust health. Autopsy was refused in all of the nineteen cases.

### Training School for Nurses.

As the Training School has so recently been established the course is still optional and must remain so for some time, though all attendants capable of taking it are encouraged to do so. At present the course of study extends over twenty-four months, instruction being given by means of lectures and demonstrations. The teaching force numbers eighteen, and an effort is being made to render the work as practical as possible. The success with which our graduates have met in nursing private cases out of the Institution proves that they are well equipped for their profession. The school term of 1912-1913 began in October with a Senior Class of twelve pupils and a Junior Class of twenty-three.

During the year the following nurses were awarded diplomas: Miss Nannie Athon, Miss Vallie Badger, Miss Ora Barnett, Mrs. Lula Futral, Miss Willie Geiger, Miss Emmie Layfield, Miss Alma Snipes, Miss Alice Vaughn, Mr. R. A. Taylor.

### Medical Society.

The Medical Society, composed of the Medical Staff of the Institution, has been a source of interest and profit to its members for some years past. Monthly meetings are held, and the physicians of the county are invited to be present and take part in the discussions.

During the year the following papers have been prepared by the members of the Staff:

Dr. B. M. Cline—The Early Diagnosis of Pellagra.

Dr. W. J. Cranston—The Use of Salvarsan in Pellagra; A Preliminary Report of Cerebro-Spinal Findings in Pellagra; A Report of Cases of Pellagra Treated With Salvarsan at the Georgia State Sanitarium; A Well-advanced Case of Pyonephrosis With Few Symptoms.

Dr. G. L. Echols—A Resumé of the Alcoholics Admitted to the Sanitarium During the Years 1910 and 1911.

Dr. E. M. Green—Phychoses Accompanying Pellagra.

Dr. G. H. Green—Empyema of the Maxillary Sinus.

Dr. S. S. Hindman—The Cytology of the Cerebro-Spinal Fluid in Psychiatry and Neurology With Special Reference to Pellagra; Some Interesting Findings in the Spinal Fluid of

Insane Pellagrins; Pathological Findings in Pellagra With Report of a Case.

Dr. Y. A. Little—Surgery in Insane Females.

Dr. L. P. Longino—Strangulated Inguinal Hernia.

Dr. J. W. Mobley—Medical Officers in Insane Hospitals.

Dr. E. B. Saye—Flat-foot.

Dr. R. C. Swint—Iodine in Surgery.

Dr. W. F. Tanner—Prostatic Hypertrophy.

Dr. J. I. Garrard—Sterilization, the Only Logical Means of Retarding the Progress of Insanity and Degeneracy.

The accompanying tables show the diagnostic grouping of the patients received during the year and the percentage ratio of each group based upon the whole number admitted; also that by race based upon their respective admissions:

TABLE I.

Form of Psychosis of Patients Admitted During the Year 1912.	White		Colored		Total

Unclassified .....	5.9	4.2	5.3

### Traumatic Psychoses.

The psychosis of two negro males followed severe head injury. Neither of these patients had a previous hospital residence. The family history of one was negative for two generations. Insanity of a paternal uncle was admitted by the other. Both patients used alcohol to excess, and one of them gave a history of syphilitic infection six years prior to his commitment. The mental disorder of one was manifested by irritability, paranoid ideas and homicidal tendencies; that of the other by deterioration and epileptic seizures; the former being classed as post-traumatic constitution, the latter as traumatic defect condition.

### Senile Psychoses.

As compared with the previous year, there was a noticeable diminution in the number of senile patients admitted; only 103 cases or 9.3% of the whole number were assigned to this group.

Five of these patients had previously been admitted to this hospital, from which they were discharged; one as improved, four as unimproved. A family history of nervous or mental disease for at least two generations was obtained in forty-one of the number; in thirty-one no information regarding relatives could be secured. Arteriosclerosis was noted in thirty-four cases, valvular heart disease in seventeen, while in thirteen additional cases both arteriosclerosis and cardiac disease were found.

The following clinical types were met with:

Deterioration . . . . .	86
Depressed and agitated states . . . . .	5
Delirious and confused states . . . . .	6
Paranoid states . . . . .	5
Presbyophrenia . . . . .	1
<hr/>	
Total . . . . .	103

### Dementia Paralytica.

The sixty cases comprising this group form 5.4% of all admissions. Of this number 48.3% belong to the white race; 51.6% to the negro race. One of these patients had, formerly, spent a few months in this Institution, from which she was discharged as improved two years prior to her present commitment. Eight had previous residences in private hospitals for the insane. Nervous or mental disease appeared in the family histories of eleven members of this group, while twenty could give no information in regard to their relatives.

A former syphilitic infection was acknowledged by forty-one and denied by four.

The following types of the disease were encountered:

Cerebral . . . . .	43
Tabetic . . . . .	15
Undetermined . . . . .	2
<hr/>	
Total . . . . .	60

### Psychoses With Other Nervous or Brain Disease.

This group is composed of forty-four cases in which mental disorder accompanied disease of the nervous system. None of

the patients had a former hospital residence. In four instances no family history could be obtained, but in nineteen a history for at least two generations was secured, in which one or more relatives suffered from nervous or mental disease.

The accompanying nervous diseases were as follows:

Cerebral arteriosclerosis .....	12
Cerebral hemorrhage, thrombosis or embolism.....	9
Cerebral softening following hemorrhage.....	3
Cerebral syphilis .....	7
Cerebral tumor .....	1
Acute chorea .....	1
Huntington's chorea .....	4
Little's disease .....	2
Meningitis . .....	1
Spinal hemorrhage (traumatic) .....	1
Undetermined . .....	3
Total.....	44

### Alcoholic Psychoses.

To this group were assigned thirty-seven of the cases admitted during the year. Of this number four had twice been inmates of this Institution, while seven had, each, one previous hospital residence. A family history of nervous or mental disease was elicited in 46% of these cases. In 83.7% a family history of chronic alcoholism was obtained. Paternal alcoholism was admitted by twenty of the thirty-seven patients.

The following types were noted:

Acute hallucinosis .....	7
Chronic hallucinosis .....	3
Delirium tremens .....	7
Deterioration . .....	11
Depression . .....	1
Korsakow's psychosis .....	1
Paranoid states .....	3
Amnesic states .....	1
Type undetermined .....	3
Total.....	37

**Drug and Other Toxic Psychoses.**

Of the thirty-four patients comprising this group all were members of the white race, with the exception of one negro female. Thirteen of the number had one or more previous hospital residences, several of them having been repeatedly treated for the drug habit in private hospitals. A family history in which nervous or mental disease appeared was obtained from eighteen of these patients, while two were unable to furnish any information in regard to relatives. In twenty-one of the thirty-one instances, in which the facts could be elicited, it was found that one or more relatives were habitual users of alcohol.

The psychoses resulted from the use of the following drugs:

Cocain . . . . .	2
Cocain and morphine . . . . .	10
Cocain and alcohol . . . . .	1
Cocain, alcohol and morphine . . . . .	1
Chloral and alcohol . . . . .	1
Laudanum . . . . .	3
Morphine . . . . .	9
Morphine and alcohol . . . . .	3
Morphine and atrophine . . . . .	1
Morphine and chloral . . . . .	1
Paregoric . . . . .	2
<hr/>	
Total . . . . .	34

**Infective-Exhaustive and Autotoxic Psychoses.**

Of the admissions for the year twenty-nine were grouped under the above heading. Only one of the number had a previous hospital residence. On his admission to this Institution in 1907, a diagnosis of manic-depressive insanity was made, and he was discharged as restored after a few months. Nervous and mental disease was acknowledged in the family histories of nine of these patients; in nine it was denied.

The accompanying table shows the etiological factors in the psychoses:

Chronic nephritis .....	2
Cholecystitis with nephritis and cardiac disease.....	1
Childbirth . . . . .	2
Puerperal infection .....	3
Frequent pregnancies and prolonged lactation.....	2
Chronic gastritis with cystitis .....	1
Exophthalmic goitre .....	1
Pneumonia . . . . .	1
Pulmonary tuberculosis .....	7
Pulmonary tuberculosis with pellagra.....	2
Typhoid fever .....	3
Surgical operation .....	1
Ulcerating sarcoma of neck .....	1
Total.....	27

### Allied to Infective-Exhaustive Psychoses.

Sixteen cases presenting the general features of an infective-exhaustive psychosis compose this group. In some the etiological factors were wanting, while in others unusual symptoms suggested the probability of a psychosis temporarily obscured by the prominence of the infective-exhaustive manifestations. In five of the number the presence of pellagra was suspected, but the evidences of that disease were too vague to justify such a diagnosis being made.

None of these patients had a former hospital residence, and in the family histories of only four was there an acknowledgment of nervous or mental disease.

### Psychoses Accompanying Pellagra.

Under this broad heading are placed all cases in which the psychosis seems to have been determined by pellagra. The cases of insanity in which pellagra appeared as a complication merely, are not included in this group. As the symptoms of certain of these cases follow more or less closely the symptoms of psychoses recognized in our classification scheme, it has been thought desirable to subdivide this group into types. For example, when the psychosis is manifested by emotional deterioration, lack of voluntary attention, negativism, stereotypy, hallucinosis, and intellectual deterioration, the subdivision into "dementia praecox type" is made. It is not meant that

the peculiar mental makeup of dementia praecox with its characteristic manner of development are present in these cases, but that the objective symptoms are analogous to those met with in that disease.

So in the "general paralysis type," there is no intention of claiming that general paralysis is caused by pellagra, but that such symptoms as exaggeration or loss of the knee jerk, speech disturbance, tremors, muscular inco-ordination, pupillary inequality or irregularity, convulsions and sensory disturbance are so characteristic of that disease that its name is given to this group of psychoses associated with pellagra in which these phenomena appear. Pellagra may be accompanied by symptoms of any form of insanity, and it is not to be understood that the clinical types are limited to those presented by the group of cases admitted during the past year.

Three of the eighty-three patients assigned to this group had previously been inmates of the Institution, two of them having been twice admitted. It was impossible to obtain any information as to the presence of pellagra preceding or during these former commitments. The proportion of white males and white females was about the same, but three times as many negro females as negro males are to be found in this group, although thirty more males were received. One of every six negro females admitted to the Institution was classed with the psychoses accompanying pellagra. A family history of nervous or mental disease was elicited from relatives of thirty-one of the fifty-eight patients concerning whom we obtained information.

According to the clinical manifestations the following types were recognized:

Infective-exhaustive type .....	46
Manic-depressive type .....	10
Dementia praecox type .....	6
Involution melancholia type .....	1
General paralysis type .....	2
Paranoic type .....	1
Type undetermined .....	17

---

Total..... 83

### **Involution Melancholia.**

During the past year only six cases were assigned to this group, three of the number being white males, three white females. None of the six had a former hospital residence. Three of them acknowledged the presence of nervous or mental disease in the family history.

### **Undifferentiated Depression.**

This group is made up of thirteen cases, all of whom with one exception were members of the white race. Two of them had previously been committed to this Institution, from which they were discharged; one as improved; one as unimproved. A family history of nervous or mental disease was given by ten of the number; by three such a history was denied.

### **Symptomatic Depression.**

The depression of one patient seemed to be determined by cardiac disease. There were marked fluctuations in the depth of her depression, which apparently depended upon the condition of the heart. She had a previous hospital residence of two years, at the end of which time she was discharged as restored. On returning to her accustomed duties, the cardiac disease became accentuated, and the accompanying depression led to her recommitment after four months.

### **Dementia Praecox.**

This large group, composed of 132 cases, or 11.9% of all admissions, is somewhat smaller than in the year 1911, when it formed 13.7% of the admissions. For the white race one of every nine patients admitted was classed under the above heading, while for the negro race the ratio was as 1 to 7. Thirty-six of the number had previously been committed to this Institution or to private hospitals for the insane, from which twenty were discharged as unimproved, thirteen as improved. One white female was discharged from this Institution as restored thirteen years prior to her present commitment, though her relatives state that she has never been entirely normal since her discharge. Fifty-two of these patients

were recognized as being of inferior mental make-up. Family histories for at least two generations showed the presence of nervous or mental disease in seventy-eight instances, while in thirty no information regarding relatives could be obtained. Of the insane relatives mentioned, maternal insanity was noted in twenty-four instances. Of the 102 cases giving reliable family histories the presence of hereditary factors was shown in 76%.

The following forms of the psychosis were met with:

Hebephrenic (including simple deterioration).....	46
Katatonic . . . . .	15
Paranoid . . . . .	50
Form undetermined . . . . .	21
<hr/>	
Total.....	132

#### **Allied to Dementia Praecox.**

Of the forty-three patients classed as allied to dementia praecox, nine had formerly been inmates of the Institution. One of the number had been committed three times within the past six years, having been discharged each time as unimproved. One was discharged as restored five years prior to her present admission. Of the remaining number, three had been discharged as improved; two as unimproved. Family histories for at least two generations acknowledged the presence of nervous or mental disease in 75% of the cases from whom information could be obtained.

#### **Paranoic Condition.**

Of the eleven cases comprising this group, one had been committed to this Institution on three former occasions within the past seventeen years, having each time been discharged as unimproved. A family history of nervous or mental disease was obtained in only four of the number.

#### **Manic-Depressive Psychoses.**

This is the largest of our classification groups, being made up of 150 cases, or 13.5% of all admissions. Sixty-five of the

number had formerly one or more hospital residences as shown by the accompanying table:

One previous admission .....	38
Two previous admissions .....	14
Three previous admissions .....	8
Four previous admissions .....	3
Five previous admissions .....	1
Six previous admissions .....	1
<hr/>	
Total.....	65

No information could be obtained in regard to the occurrence of nervous or mental disease in relatives of twenty-three patients, but such a history was elicited from eighty-eight and denied by thirty-nine. Ninety-six acknowledged former attacks as follows:

One previous attack .....	35
Two previous attacks .....	16
Three previous attacks .....	15
Four previous attacks .....	6
Six previous attacks .....	3
Ten previous attacks .....	1
"Several" previous attacks .....	17
"Many" previous attacks .....	3
<hr/>	
Total.....	96

The psychosis presented the following forms:

Manic .....	108
Depressive .....	22
Circular .....	8
Mixed .....	12
<hr/>	
Total.....	150

#### Allied to Manic-Depressive Psychoses.

Under the above heading were placed thirty-eight cases, seven of whom had formerly been inmates of the Institution. One of the number had been admitted twice previously; one four times. Only two of the seven patients had been discharged as restored; the remainder were considered to be im-

proved only. One of the restored cases remained at home for six years; the other for nine years.

Of the thirty-one patients one was said to have had two previous attacks, one three, one five and one "many." The symptoms leading to their assignment to this group, while suggesting manic-depressive insanity, were not clear enough to admit of that diagnosis being made, while in some cases additional symptoms rendered such a diagnosis doubtful.

A family history of nervous and mental disease for at least two generations was given in twenty-one instances, and denied in nine.

### **Epileptic Psychoses.**

Of the ninety-four epileptics admitted during the year, seven had formerly been in the Institution, five of whom were discharged as unimproved, two as improved. The presence of nervous or mental disease was noted in the family histories of fifty of the ninety-four patients; no information could be obtained regarding the relatives of twenty-one. It was found that twenty-three of the fifty patients mentioned above had one or more relatives who suffered from epilepsy, the number of individuals so afflicted being thirty-one. Maternal epilepsy was noted in four instances, paternal in three, while paternal imbecility was acknowledged in eight. A history of alcoholic relatives was given by sixty-four of the ninety-four patients, paternal alcoholism being admitted by forty-eight; maternal alcoholism by five; both paternal and maternal alcoholism by three. No information in regard to alcoholic relatives could be secured in eight instances.

According to the clinical manifestations, the following conditions were noted:

Deterioration . . . . .	74
Excitement, simple . . . . .	10
Excitement, hallucinatory . . . . .	6
Dazed states . . . . .	2
Paranoid states . . . . .	2
<hr/>	
Total . . . . .	94

### **Hysterical, Psychasthenic and Neurasthenic Psychoses.**

This group is composed of nine cases, all of whom belong to the white race, two being males and seven females. Of the number five had previously been admitted to this Institution, from which they were discharged; one as restored, two as improved and two as unimproved. A family history of nervous or mental disease was given by seven of the number.

Of the males one was classed as neurasthenia, one as psychasthenia.

Of the females, one was classed as neurasthenia, three as hysteria and three as psychasthenia.

### **Other Constitutional Disorders and Inferiorities.**

Under the above heading were placed thirty-one individuals, five of whom had each a former hospital residence, two being discharged as improved, three as unimproved. In nineteen instances a family history of nervous or mental disease was obtained; in six such a history was denied. Fourteen of the patients used alcohol to excess, while twenty-two denied the presence of alcoholism in relatives.

Two white males were classed as constitutional psychopaths; neither showed appreciable intellectual defect, but manifested emotional instability, marked egotism, lack of application, want of consideration for others, and absence of any sense of responsibility. One since childhood was given to lying, theft, foolish squandering of money, and later became an accomplished swindler. The other, a clergyman, showed prominent hysterical symptoms with sexual perversions.

The remaining twenty-nine, classed as constitutional inferiority, showed a mild grade of intellectual defect. Six had been under arrest one or more times for infractions of the law; three were drug habitues; six manifested abnormal sexual tendencies; while fifteen were given to outbreaks of excitement, violence and destructiveness.

### **Imbecility and Idiocy.**

During the year 110 imbeciles and idiots were admitted to the Institution. This number is much larger than that for the

previous year, in which only sixty-seven such cases were received. Of the 110 patients, eighty-nine were imbeciles and twenty-one were idiots. Sixteen of the imbeciles and nine of the idiots suffered also from epilepsy.

Fourteen of the number were readmissions. Family histories could be obtained of only fifty-four of the 110 patients, but these showed the presence of mental or nervous disease for at least two generations in 85 per cent. of the cases. A history of alcoholic relatives was acknowledged by forty-seven, and denied by thirteen.

#### **Not Insane.**

Five of the patients admitted during the year were not insane. Four of them were white males; one a negro male, and none of the five had previously been in a hospital for the insane. All of the white patients were habitual users of alcohol. Four of the number were criminals, who sought to evade punishment by coming to the Institution. One white male was an alcoholic who manifested no mental disorder.

#### **Unclassified.**

This group is composed of fifty-nine patients, 5.3% of all cases admitted. A number were inaccessible to examination, while the information received concerning others was so indefinite or so palpably incorrect that no conclusions as to the character of the psychosis could be drawn. Other cases were characterized by unusual symptoms or by peculiar combinations of symptoms, which rendered the diagnosis uncertain. Six of the number had former hospital residences, three being discharged as improved. Twenty-six gave family histories in which nervous or mental disease appeared; nine denied such etiological factors. In nine instances no family history and only a fragmentary personal history could be elicited.

In the following tables will be found more detailed information in regard to the patients admitted during the year.

## Report of Dentist.

Dr. L. M. Jones, Superintendent.

Dear Sir: I beg to offer the following itemized report of the work done in the Dental Department during the year ending December 31, 1912:

Extractions . . . . .	779
Gold fillings . . . . .	23
Amalgam fillings . . . . .	439
Cement fillings . . . . .	152
Gutta-percha fillings . . . . .	8
Enamel fillings . . . . .	2
Gold inlays . . . . .	5
Gold inlays reset . . . . .	1
Porcelain inlays reset . . . . .	1
Nerve cappings . . . . .	12
Nerve treatments . . . . .	48
Nerves devitalized . . . . .	59
Root treatments . . . . .	156
Root fillings . . . . .	77
Applications of mummefying paste . . . . .	7
Abscess treatments . . . . .	51
Abscesses lanced . . . . .	32
Abscesses aspirated . . . . .	1
Lancing gums over third molar . . . . .	20
Treating gums about third molar . . . . .	60
Excessive hemorrhages arrested . . . . .	1
Treatments for pyorrhoea alveolaris . . . . .	11
Cleaning teeth (number of patients) . . . . .	19
Removing calcareous deposits (number of patients) . . . . .	51
Applications of nitrate of silver . . . . .	8
Treatments for facial neuralgia . . . . .	21
Treatments for odontalgia . . . . .	130
Treating gums (number of patients) . . . . .	32
Treatments for oral ulcers . . . . .	8
Treatments for stomatitis . . . . .	4
Antrum operations . . . . .	1
Antrum treatments . . . . .	3
Curettng alveolar process . . . . .	3
Plates made . . . . .	4
Plates repaired . . . . .	13

## SIXTY-NINTH ANNUAL REPORT

Gold crowns .....	2
Porcelain crowns .....	5
Cast base crowns (accolite) .....	3
Crowns repaired .....	12
Crowns reset .....	3
Bridges removed .....	2
Bridges repaired .....	3
Bridges reset .....	7
Shaping up disfigured teeth (number of patients)....	2
Setting screws in roots .....	3
Special calls to wards .....	141
Number of new patients examined .....	850
Total number of patients treated .....	1,321
Total number of operations and treatments.....	2,284

Respectfully submitted,

GEORGE H. GREEN, Dentist.

# Report of the Superintendent of Nurses

Dr. L. M. Jones, Superintendent.

Dear Sir:—I wish to offer the following report of the Training School for the year ending December 31, 1912:

The first commencement of the Training School was held October 16th in the amusement hall. The class consisted of eight young ladies and one young man. All the graduates are now employed in the Institution except one young lady whose health failed at the time of graduation.

## Nursing Staff.

Superintendent of Nurses .....	1
Assistant Superintendent of Nurses .....	1
Operating Room Supervisor .....	1
Graduate Nurses .....	7
Pupil Nurses in School .....	20
Probationers . . . . .	2
Number taken in on probation .....	15
Number accepted as pupil nurses .....	13
Number withdrew from school .....	5
White female attendants .....	159
Number of vacancies .....	0

## Plan of Instruction.

Instruction is given by lectures, demonstrations, clinical lectures, recitations and practical work on the wards.

## Announcement of Course of Study.

### First Year.

Theory of Nursing .....	32	hours.
Demonstrations . . . . .	16	"
Dietetics . . . . .	16	"
Anatomy and Physiology .....	16	"
Bandaging . . . . .	8	"
Emergencies . . . . .	8	"
Materia Medica and Therapeutics .....	16	"
Hygiene and Bacteriology .....	16	"
Pharmacy . . . . .	16	"

## Second Year.

Medical Nursing .....	16	hours.
Surgery .....	16	"
Surgical Nursing .....	12	"
Anaesthetics .....	4	"
Laboratory .....	12	"
Gynaecology .....	8	"
Diseases of eye, ear, nose and throat.....	8	"
Nursing Ethics .....	4	"
Hydrotherapy and Massage .....	16	"
Theory of Obstetrics and Diseases of Children.....	16	"
Mental Diseases .....	16	"
Nursing Insane .....	14	"
Nervous Diseases .....	16	"

## Graduates—Class of 1912.

Miss Nannie Athon—Head Nurse Infirmary, White Male Department.

Miss Vallie Badger—Head Nurse Chronic Wards, White Male Department.

Miss Ora Barnett—Head Nurse First Reception Ward, White Female Department.

Mrs. Lula Futral—Home. Moxley, Ga.

Miss Willie Geiger—Head Nurse Chronic Wards, White Female Department.

Miss Emmie Layfield—Head Nurse Infirmary, Green Building, White Female Department.

Miss Alice M. Vaughn—Head Nurse Second Reception Ward, White Female Department.

Miss Alma Snipes—Instructor in Hydrotherapy and Massage.

Mr. Robert Taylor—Head Nurse, Colored Male Department.

We have again to record most gratefully our indebtedness to the Medical Staff for lectures and medical attention given to the nurses.

Respectfully submitted,

MAE MIESSE,

Superintendent of Nurses.

## Report of the Apothecary.

Milledgeville, Ga., Jan. 1, 1913.

Dr. L. M. Jones, Superintendent.

Dear Sir:—I have the honor to submit to you my report of the Apothecary Department for the year 1912. It is the policy of this department to manufacture all pharmaceuticals and preparations used by the Institution, and we have done so at all times where it was economy to do so, restricting purchases to chemicals and such specialties as were required by the physicians.

### Statement.

The following is a statement of all expenditures, etc., of Apothecary Department for the year 1912:

Amount of drugs purchased, including all druggists' sundries, dental and laboratory supplies, all preparations for fumigation, disinfecting and sanitary purposes; also alcohol, wines and whiskies.....	\$8,078.51
Amount of drugs sold officers and employes.....	\$ 287.17
Number of prescriptions filled.....	34,293
Amount of disbursements .....	\$7,523.27
Balance of stock on hand.....	\$3,265.38
Amount of fixtures, etc., on hand.....	\$ 385.50

Respectfully submitted,

D. S. CARRINGTON,

Apothecary, G. S. S.

## Report of the Pathologist.

Dr. L. M. Jones, Superintendent.

Dear Sir:—The following examinations and laboratory work are herewith given for the year 1912:

1,037	Specimens of urine.
210	“ “ sputa.
141	“ “ spinal fluid.
129	“ “ feces.
124	“ “ blood.
16	“ “ blood serum.
11	“ “ pus.
3	“ “ uterine scrapings.
4	“ “ tumors.
2	“ “ gastric contents.
1	“ “ pleuritic fluid.
1	“ “ vaginal discharge.
1	“ “ thyroid gland.
1	“ “ throat swab.

In addition to the above, a bacteriological examination of the water supply was made, and thirty-six autopsies have been performed.

Of the original examinations, the following details are given:

### Urine.

267	Specimens contained albumin.
80	“ “ albumin and casts.
46	“ “ albumin and pus.
17	“ “ albumin and reds.
18	“ “ casts and no albumin.
12	“ “ pus and no albumin.
21	“ “ sugar.
26	“ “ urates.
162	“ “ phosphates.
4	“ “ fat.

The specimens containing urates and phosphates are those that contained decided amounts, and do not include specimens that showed traces or small amounts of these substances. Twenty-one specimens, or over 2% of approximately 1000, contained sugar.

Emerson, in the J. A. M. A. Vol. LIX No. 25, pp. 2245, calls attention to the frequency of glycosuria in the insane, and gives other authors as reference. He gives a percentage of 4.28% as positive for sugar in 650 specimens of urine from examinations made upon admissions. Involutional melancholia gave the largest percentage in this series, while dementia paralytica gave the lowest percentage. He points out in his article that glycosuria in the insane does not always mean a diabetic process, and emphasizes its importance in differential diagnosis, especially in organic brain diseases and melancholia, as in these two repeated tests will often show that the presence of sugar is only temporary.

### Sputa.

Of the 210 specimens examined, seventeen or over 8% of the original (195) contained tubercle bacilli. The Antiformin method of examination is used as a routine procedure for all sputa.

### Cerebro-Spinal Fluid.

A tabulated report of these examinations and notes thereon accompany this report.

### Feces.

Three specimens were examined for tubercle bacilli and none found. Three specimens found to contain occult blood. One specimen contained amoeba histolytica, and was obtained from a female negro who had dysentery.

Of the 122 specimens examined for animal parasites and ova:

14	contained	ova of Uncinaria Americana.
10	"	ova of Trichocephalus dispar.
10	"	Strongyloides embryos.
1	"	ova of Ascaris Lumbricoides and Trichocephalus dispar.
1	"	ova of Uncinaria Americana and Trichocephalus dispar.
1	"	ova of Trichocephalus dispar and embryos of strongyloides.

It is commonly supposed that the Trichocephalus dispar causes little inconvenience to the host. In three cases in which they were found there were active diarrhoeas and decided

emaciation that could hardly be attributed to other causes and that showed improvement after treatment. Recent literature contains several articles, showing that the whip worm and also the pin worm are important as an etiological factor in appendicitis, therefore, infection with these parasites is as much indication for treatment as any other intestinal parasite.

No routine examinations of patients have been made for intestinal parasites, but I think a specimen of feces should be sent from every patient admitted.

### Blood.

17	Specimens positive for malaria (Tertian type).
17	“ for white counts.
17	“ for differential count.
16	“ for Widal (Three positive).
9	“ for haemoglobin percentage.
3	“ for red counts.

### Wassermann (Nogouchi).

Sixteen specimens of blood-serum were examined for the Wassermann reaction, Nogouchi modification. All of these serums were obtained from cases of pellagra or suspected pellagra that had shown pathological changes in the cerebro-spinal fluid. Nine of these were cases reported last year as showing changes in the cerebro-spinal fluid and the Wassermann test was made this year. Four of these nine gave positive reactions, the five others of course being negative. The remaining seven are mentioned under the spinal fluid report.

I have been very unfortunate in keeping guinea-pigs for this work, owing to lack of heat in the laboratory during the winter at night. Two dozen, lots of one dozen each, were purchased within six months, and practically all of them died before they could be used for serum purposes.

### Pus, Etc.

Eleven specimens of pus were examined for different organisms and bacterial vaccines made and used in three cases. And I should mention here that two anti-typhoid vaccines were made and used, and that the cultures of typhoid bacilli, both for

vaccines and Widal tests, were kindly supplied by Maj. F. F. Russell, Army Medical School, Washington, D. C.

### Miscellaneous.

Three specimens of uterine scrapings for cancer; four tumors; two stomach contents for lactic acid, etc.; one pleuritic fluid for tubercle bacilli; one vaginal discharge for spirochetes; one thyroid gland; and one throat swab for diphtheria.

### Water.

The water supply was examined in August. Twenty-five to thirty bacterial colonies per cc., on lactose litmus agar at 37 degrees C., were found. No colon-like bacilli were found. At the time of year when the examination was made there is less rain than during the winter months, consequently the contamination from surface drainage into the river above the pumping station is at a minimum. However, repeated examinations for the presence of chlorides at all times during the year has shown only a trace and many times entire absence of these salts which indicates a water far above the average. A maximum of 100 colonies of bacteria per cc. is generally considered as a standard, though good water may contain more and yet be harmless for drinking and cooking purposes.

### Autopsies.

Of the thirty-six autopsies performed, twenty-six were made during the first half of the year, and during July, August and December none were obtained, although the number of deaths was 620 for the year with something like a constant monthly average. Many of the patients were patients that came to the Institution several years ago, and their histories are incomplete, which make them much less important from a statistical and record standpoint even if the cause of death is ascertained at autopsy. The Medical Staff has been very unsuccessful in obtaining permissions for autopsies from the relatives, and especially so in some very interesting cases that would have been very instructive to all. About 2% to 4% of the dead are autopsied here as compared with 20% to 40% in other institutions similar to this. I am reliably informed that nearly

all the dead are autopsied in one asylum that is about the same size as this one.

The following abstracts are given of the autopsies performed, and also a brief case history where it is complete enough to be of value:

No. 485.

W. B.—White male. Age 47 years. Hospital residence 6 years, 5 months and 19 days. Diagnosis traumatic epilepsy. Cause of death, suffocation while suffering from a convulsion.

**Autopsy** fifteen hours after death. Only brain examined. Depression over left temporo-parietal region four centimeters in diameter, due apparently to trephining operation. Dense adhesions and fibrous tissue surrounding brain, pia and dura at point opposite this depression. Centre of this dense mass is at the intersection of lines through the long axis of brain and left inferior frontal lobe. Sections through left hemisphere show a necrotic area extending to the mid-occipital convolution, and a bullet of about .32 calibre is found in a slight depression near the occipito-parietal suture.

**Microscopical** examination shows no signs of recent inflammation. Dura around the wound appears to be made up of several layers. Sections from other parts of wound show many irregular patches of necrosis and granulation tissue which end abruptly against the healthy tissue. Sections from other regions of the brain are apparently normal.

No. 486.

J. F.—Colored female. Age 25 years. Hospital residence 6 months, 13 days. Psychosis, infective-exhaustive. Cause of death, pellagra. Numerous scars over the body with enlargement of the epitrochlears. Reflexes active. Pupillary reaction and Romberg not satisfactorily determined. Babinski present. Heart sounds exaggerated. Lumbar puncture made about four months after admission, when the pellagra was in a subacute stage, showed twenty-four cells per cb. mm. and a positive butyric acid reaction.

**Autopsy** thirty-six hours after death. Spinal cord shows a thickened dura; is soft and spongy, and the columns can not be made out distinctly, and there are several small hemorrhagic areas. Spinal fluid increased and clear straw colored. Brain shows injected vessels of dura and pia with some edoema of the pia. Dural adhesions to the margins of each hemisphere along the longitudinal fissure are very marked, as well as the pia, which shows a tendency to tear the cortex at this point. Heart anaemic and flabby. Right lung partially collapsed. Old adhesions throughout the abdomen, and enlargement of the mesenteric glands. Kidneys show a slightly adherent capsule and roughened cortex. Tufts are prominent and dark red, and there is an increase of the interstitial tissue. Stomach shows several petechial hemorrhages in the mucous

coat. Cecum enlarged. Small intestines and colon are very much congested and roughened, but no ulcers are observed.

**Microscopical** examination of the feces at autopsy shows many tri-cocephalus dispar ova and a few embryos of strongyloides stercoralis. Spinal cord shows cellular infiltration, especially marked around the meninges and following the nerve roots and blood vessels. Ganglion cells in the anterior horns stain poorly, showing chromatolysis, some atrophy, displaced nuclei, and there are a few corpora amylacea. Brain shows a general congestion of blood vessels, but otherwise is apparently negative. Intestines are the seat of a typical catarrhal enteritis. No microscopical ulcers are found, but there is decided hyperplasia of mucous coats.

**No. 487.**

O. M.—Colored female. Age 36 years. Hospital residence 1 year, 9 months and 5 days. Psychosis, manic-depressive. Cause of death, pellagra. Muscles flabby. Palate highly arched. Pharynx inflamed. Cervical glands on left enlarged. Owing to the negative state of patient and lack of co-operation, further examination was unsatisfactory. About fifteen months after admission symptoms of pellagra noticed; indefinite history of an attack few months before admission. Typical symptoms of pellagra. Lumbar puncture one and one-half months before death showed 55 cells per cb. mm. Positive Wassermann (Nogouchi) twenty-four hours before death.

**Autopsy** twenty-four hours after death. Spinal cord negative. Dura congested and adherent. Pia also adherent and tears the cortex, leaving the typical worm-eaten appearance. Firm adhesions right lung and several healed areas (1 cm. to 2 cm. in size) containing calcareous deposits. Practically negative examination of other organs.

**Microscopical** examination shows cellular infiltration of pia and blood vessels with atrophy and fatty degeneration of ganglion cells of brain. Spinal cord from cervical region shows nothing of note. Bronchial glands filled with cheesy deposits. Kidneys show a glomerular nephritis. Liver fatty degeneration.

**No. 488.**

M. B.—White female. Age 70 years. Hospital residence twenty-six years, five months and one day. Diagnosis unknown. Cause of death, organic brain and nervous disease. Duration of last illness, eighteen months.

**Autopsy** seven hours after death. Brain weighs 870 grams. Dura tough and adherent to calvarium and pia, the latter being very adherent to cortex and tears when stripped. Cortex darker than normal. Lateral ventricles contain an excess of fluid. Decided atheroma of blood vessels and cystic choroid. Heart flabby and slightly dilated and some thickening of mitral valves. Lungs normal. Kidneys have an adherent capsule and granular cortex. Suprarenals slightly enlarged. Cut surface

of liver is grayish mottled in appearance. Marked atheroma of abdominal and thoracic aorta.

**Microscopical** examination of the brain shows atrophy of cortex, cellular infiltration of pia and scattered areas of infiltration around the vessels of the white matter. Liver appears to be the seat of a chronic congestion. The involvement of the glomeruli and tubules of kidneys is marked by proliferation and degeneration of the epithelium, cellular infiltration and thickened vessel walls.

**No. 489.**

H. B.—Colored male. Age 61 years. Hospital residence 3 months and 27 days. Diagnosis organic brain disease. Cause of death, pericarditis and nephritis. Hyperaesthetic areas on the right and anaesthetic areas on the left. Smell and taste impaired. Elbow and patellar reflexes exaggerated on left side. Gait is slow and patient drags left side. Subjective symptoms of pain over the heart, which is displaced downward and outward. Apex impulse in sixth interspace and perceptible hardening of arteries.

**Autopsy** fourteen hours after death. Skull not opened. Well-nourished subject. Edoema of lower extremities. Muco-purulent discharge from mouth, ears and nose. Many adhesions in both pleural cavities, 600 cc. blood tinged fluid right cavity and 500 cc. clear fluid in left one. Pericardium densely adherent to lower lobe of left lung and also to the heart. Adhesions to heart are very firm, and have apparently existed for some time. Heart contains much dark blood but no clots; is flabby and walls are thinned. Right lung weighs 480 grams, and shows a few reddish patches. Left lung weighs 845 grams, and is simply "water-logged." Left kidney appears nodular and roughened; cuts with resistance, and shows in centre an irregular cavity (1.5 cm. in diameter), which contains a milky white fluid. Extending outward from this cavity toward the cortex is a distinct and triangular area of inflammation or congestion. Cortex and kidney substance proper show no line of separation. Some adhesion of capsule and roughened cortex. Right kidney congested with adherent capsule and granular cortex. One large black stone in gall bladder, and marked atheroma of thoracic and abdominal aorta. All other organs appear to be normal.

**Microscopical** examination shows a pneumonic process in the lungs, interstitial nephritis and a thickened capsule of the liver with some cellular infiltration and congestion.

**No. 490.**

C. B.—Colored female. Age 57 years. Hospital residence 24 years, 2 months and 3 days. Psychosis on admission, manic-depressive. Cause of death, thrombosis of cerebral arteries and softening. No history of value. Last illness thirty-two days.

**Autopsy** two hours after death. Dura adherent to pia and latter to cortex, being more marked along the longitudinal fissure. Occipital

lobes very soft and mushy-like in consistency, and a large amount of bloody fluid escapes from this region when the brain is removed. Occipital lobes on each side are darkened, and show many scattered areas of yellowish-gray color. Consistency of these areas and entire lobe is soft and tears when cut. Right occipital lobe just in front of middle convolution appears softer, and shows a distinct tendency to cyst formation. Areas of softening in each lobe can be followed to lateral ventricles, and the latter are empty but moist. Arteries at the base of brain are covered with yellowish patches and are almost completely occluded. Cerebral arteries throughout are thickened, and show complete occlusion of lumen of some of the terminal branches. Over the pons there is an irregular blood clot three centimeters in largest diameter. Lungs negative except hypostasis and a few adhesions of the right chest wall. Heart shows some vegetation on the aortic valves. Kidneys cystic, adherent capsule and thinned granular cortex and corticle cysts and indistinct markings internally. Liver decidedly congested. Aorta atheromatous throughout its entire length.

**Microscopical** examination of brain shows fatty degeneration of the ganglion cells and blood vessels, and some of the former are thickly studded with rounded granules and there is a general infiltration with round cells.

#### No. 491.

W. H.—Colored female. Age 81 years. Hospital residence 30 years, 5 months and 18 days. Senile psychosis. Cause of death, pulmonary edoema and suppurative nephritis. Last illness about ten days. No history of value.

**Autopsy** ten hours after death. Brain not examined. Palpation of abdomen reveals a hard nodular mass, which roughly measures ten centimeters in diameter; tendency to umbilical hernia. Omentum attached to peritoneal wall at umbilicus. Uterus greatly enlarged. Appears well above the brim of the pelvis and is hard, indurated and nodular. On the right side are adhesions to pelvic contents and remnant of broad ligament. Left lung is bound down by dense adhesions; cuts with resistance; is leathery; exudes a large amount of frothy fluid, and weighs 350 grams. Right lung weighs 525 grams, and has the same general appearance as the left. Heart weighs 340 grams, is dilated and enlarged. The endocardium is thick and dense; its surface is covered with red-dened areas and a few vegetations. Valves all hold water, but are thickened and edomatous, especially the mitral and aortic. Pericardium contains an excess of fluid. Liver shows some evidences of old adhesions. Gall bladder contains four small stones. Left kidney weighs 235 grams; is enlarged; has an adherent capsule which, when removed, shows a granular cortex and many small whitish areas containing a milky fluid. Internal kidney structure destroyed to a large extent, and is pale and streaked. Right kidney weighs 85 grams, and upon section appears similar to left; entire organ is dark, soft, flabby and easily

turn. Uterus weighs 830 grams; cavity is obliterated, and there are many calcareous areas varying from the size of a pin-head to a peanut. Aorta atheromatous throughout.

Microscopical examination shows a new growth of connective tissue cells with fatty degeneration of the endocardium and heart. Liver appears to have been the seat of a chronic inflammation and congestion. Kidneys show various stages of inflammation and destruction of tissue. The glomeruli are enlarged, elongated and capsules are dilated and walls thickened. The tubules are filled with cells, debris and some hyaline substance.

No. 492.

L. H.—Colored female. Age 39 years. Hospital residence 1 year, 2 months and 25 days. Diagnosis, dementia praecox. Cause of death, meningitis and nephritis. At time of admission deep reflexes were exaggerated, and there were some tremors of tongue and fingers; otherwise the physical examination was negative. About four months previous to death patient developed pellagra.

Autopsy two hours after death showed edoema of the pia, thickened dura and pia with a few adhesions of recent formation. Pial vessels show some milky discolorations. Some atrophy of the frontal lobes, as well as the cortex and olfactory. Aortic valvular disease and atheroma. Adhesions apex of left lung. Yellow liver with adherent capsule. Congested kidneys with thin cortex and increased resistance and multiple fibroids of the uterus.

Microscopical examination of brain shows a diffuse exudative inflammation of the meninges, cortex and extending into the brain substance proper. Sections from the medulla show some inflammation, but no involvement of ganglion cells. Liver shows marked fatty degeneration, and kidneys show a glomerular nephritis.

No. 493.

K. N.—Colored female. Age 44 years. Hospital residence 25 years, 4 months and 2 days. Diagnosis, imbecility. Cause of death, pellagra. No history of value.

Autopsy twelve hours after death. Only brain examined. Adherent and thickened dura. Some edoema of pia and pachonii interna ossificans.

Microscopical examination shows apparently nothing of importance.

No. 494.

M. K.—Colored female. Age 15 years. Hospital residence 2 months and 29 days. Diagnosis, dementia praecox, accompanying pellagra. Cause of death, pellagra. At time of admission negative state of patient did not allow of a thorough examination. Patellar reflexes exaggerated, and a slow, unsteady gait.

Autopsy three hours after death. Only brain examined. Dura adherent along the longitudinal fissure. Pia edematous over the right occip-

ital lobe and slightly adherent to the cortex, but does not decorticate. Cortex is slightly thinner than normal. Right optic thalamus in its posterior third shows a small area of discoloration. Otherwise the brain is negative.

**Microscopical examination negative.**

**No. 495.**

M. F.—White female. Age 67 years. Hospital residence 25 years and 20 days. Diagnosis unknown. Cause of death, organic brain disease. History of no value. Blind in left eye.

**Autopsy** twelve hours after death. Dura very tough and adherent to the pia, especially along the median fissure; pia very edematous, and left optic nerve very much atrophied. Falx cerebri very adherent. Arteries at base are decidedly marked with yellow patches. A third anterior cerebral artery is present. Lateral ventricles contain an excess of fluid. Choroid plexi studded with cysts. Omentum rolled up and non-adherent. Liver appears to be atrophied, and urinary bladder is distended. A few pleural adhesions more marked along posterior border of upper lobe of left lung. Heart shows an excessive amount of epicardial fat. Lungs negative on section. Kidneys are small, contracted, have adherent capsules and granular and very thin cortices. Internally the tufts are indistinct, and there are many scattered areas of a whitish glistening appearance. Spleen negative. Liver weighs 530 grams; is mottled in appearance; cuts with resistance; and cut surface is a grayish yellow color. Gall bladder closed and filled with one mass of yellow stones and concretions. Bladder contains 50 cc. of urine. Uterus atrophied. Right ovary cystic.

**Microscopical examination** of the brain shows changes in some of the ganglion cells, cellular infiltration around the blood vessels and a decided thickening of the walls of the latter. Cellular infiltration is more marked around the meninges and cortex. Liver shows fatty infiltration and degeneration, increase in connective tissue elements, new-formed gall ducts, and throughout a condition simulating atrophic cirrhosis with fatty degeneration. Kidneys show a thin cortex, an increase of fibrous tissue between the tubules, loss of epithelium and a general diffuse nephritis.

**No. 496.**

E. D.—Colored female. Age 40 years. Hospital residence 1 year, 5 months and 19 days. Psychosis, manic-depressive. Cause of death, tubercular enteritis and edema of brain. At time of admission the patient showed nothing physically except some stigmata.

**Autopsy** three hours after death. Body very much emaciated. Vessels of dura are empty and the latter is adherent to the brain along the median fissure. There are two milky white patches, two centimeters in diameter, on each side in the anterior occipital region where dura was extremely adherent. Pia is edematous and tense throughout, and

its vessels are congested. Convolutions are about normal, but cortex is thin. Brain weighs 1,100 grams. Separation of the two hemispheres is difficult, and there are some signs of adhesions around the base. Appendix measures eleven centimeters; is adherent to caecum; and contains pus and fecal matter. Mesenteric glands are enlarged, varying from size of a buckshot to three or four times that, and section of these glands show dirty reddish surface. Mesentery is dirty and dull looking. Mucous coat of colon shows many reddened and grayish-yellow areas, also many rough and undermined ulcers, as well as healed areas or cicatrices. There are hemorrhagic areas along the serous coats of both colon and small intestine, and the mucous coat of the latter is very much congested. Dense adhesions at apex of each lung, but section shows no patches or cavities. Heart is flabby, pale and dilated slightly. Spleen pale; but otherwise normal. Liver also appears normal. Kidneys enlarged; cortices thin and irregular; capsule strips easily, and leaves a smooth and grayish-red cortex, and these patches extend into the cortex.

**Microscopical** examination of the brain shows an exudative, fibrinous meningitis of an acute type involving the meninges and cortex. No changes are perceptible in the ganglion and neuroglia cells. Along the vessel courses the infiltration and congestion are very marked, especially so in the pia-arachnoid. No other tissues were examined.

#### No. 497.

S. H.—White female. Age 61 years. Hospital residence 5 years, 11 months and 18 days. Diagnosis, imbecility. Cause of death, tubercular meningitis and miliary tuberculosis. History of no value.

**Autopsy** seven hours after death. Adherent dura throughout, edematous pia, pronounced adhesions at base and several pinhead tubercles. Brain weighs 1,070 grams, and shows flattened convolutions, thin cortex, dirty colored white substance; and lateral ventricles are dilated with an excess of fluid. Cerebellum very much congested. General atheroma of cerebral vessels. Both lungs adherent, right one densely so, and tears when removed. Left pleural cavity contains 500 cc. of foul mucopurulent fluid, and shows many white cheesy patches on chest wall. Cavities and tubercles in various stages throughout each lung. Spleen weighs 230 grams; is mottled and adherent to surrounding structures; shows old cicatrix and several whitish areas on its external surface. Liver is soft, mottled and congested. Omentum adherent to pelvic organs. There is an adhesion of the mesentery to small intestine forming a loop about ten centimeters in diameter. Appendix is bound down in a mass of adhesions. Necrotic areas on the under surface of the caecum. Kidneys are cystic, and show interstitial and cortical involvement. Mesenteric and retroperitoneal glands are all enlarged.

**Microscopical** examination shows a very active cellular infiltration of pia and what appears to be scattering miliary tubercles. Cortex is infiltrated to a marked degree and the meshes of same, as well as the pia,

show scattering dilations from the effect of serous exudates. There are some signs of a chronic or senile change. Liver shows many miliary tubercles, localized congestion and marked fatty degeneration, there being very few if any normal liver cells. Spleen is also filled with miliary tubercles, a few large ones, and many spots of localized congestion. Kidneys show a marked diffuse nephritis with extremely thickened blood vessels.

**No. 498.**

W. F.—White female. Age 32 years. Hospital residence 2 years, 6 months and 28 days. Diagnosis, epilepsy. Cause of death, status epilepticus. First symptoms five years previous to admission. Grandfather insane for fifteen years before his death. Examination at time of admission was practically negative.

**Autopsy** twenty-four hours after death showed some edoema of pia, old meningitis, no atheroma of cerebral vessels but some congestion, cystic choroid plexii and a brain weighing 1,250 grams. Lungs show hypostasis and edoema. Left kidney cystic. Liver somewhat mottled externally. Otherwise negative.

**Microscopical** examination of brain shows nothing of note. Liver shows decided fatty infiltration and degeneration. Kidneys show many hemorrhages into the tubules, glomeruli and interstitial tissue and otherwise a diffuse nephritis.

**No. 499.**

F. M.—Colored male. Age 75 years. Hospital residence 1 month and 17 days. Psychosis, senility. Cause of death, pulmonary tuberculosis and chronic nephritis. Examination of patient when admitted showed marked arcus senilis, diminished reflexes, unsteady gait, elongated chest, strictured urethra and pronounced dementia.

**Autopsy** twenty-four hours after death. Dura thick, tough and adherent to calvarium and the pia, and the latter adherent, decorticating and a thin, irregular cortex. Convolutions are flattened, small and pressed closely together, partially obliterating the sulci between. Hemispheres separated with difficulty. Cerebral vessels, as well as those of pia-arachnoid, are atheromatous throughout. Lateral ventricles dilated and contain an excess of fluid. Heart shows signs of old pericarditis. Right lung weighs 840 grams, and is studded superficially with many small, hard or chalk-like areas throughout, otherwise congested and edematous. Left lung bound down with adhesions, collapsed and tears readily when removal is attempted. Kidneys show multiple abscesses in the cortices, and the latter are thin and granular. Medullary markings are indistinct at points and encroach upon the cortex. Liver is mottled; has a thick capsule and roughened surface beneath.

**Microscopical** examination of brain shows the pia to be heavily infiltrated with round and red cells, and there are numerous capillaries from the larger vessels filled with blood cells, and rupture of these capillaries has taken place at many points. Find about the same condition in the

pia of medulla and spinal cord. Cortex of brain does not seem to be involved, and the ganglion and other cells of the brain and spinal cord are apparently normal. Lungs show localized spots of pneumonia and a few tubercles. Liver shows many atrophied cells, containing yellowish-brown granules, and some hyperplasia of the interlobular tissue with slight cellular infiltration. Kidneys are the seat of a diffuse nephritis of the hemorrhagic type, and the blood vessels have much thickened coats.

**No. 500.**

C. L.—White female. Age 82 years. Hospital residence 6 months and 1 day, last admission. Two previous admissions, with a total residence in Asylum of forty-five years. Diagnosis, dementia praecox. Cause of death, pericarditis and nephritis.

**Autopsy** twenty-four hours after death. Brain shows nothing, except adhesions of dura and atrophy. 1,200 cc., 700 cc., and 300 cc. of straw-colored fluid taken from right pleural cavity, left cavity and abdomen respectively. Lungs are heavy and contain much fluid. Heart is enlarged and displaced upward to the left. Pericardium is obliterated or densely adherent to heart, and the latter is soft, flabby, and tears easily through the muscular walls, which are dark and angry looking. Valves are all thickened and contain small yellow patches. Aorta extremely atheromatous. Liver is yellowish-brown on cut surface, and shows radiating whitish streaks. Gall bladder adherent. Kidneys are small, contracted and slightly cystic, with thin adherent capsule and granular glistening cortex. Tufts are small, congested and compressed. Spleen enlarged and congested.

**Microscopical** examination shows an acute cellular meningitis. Kidneys show a chronic diffuse nephritis of the interstitial type. Heart muscle shows brown atrophy and fatty degeneration. There is hyperplasia of pulp and interstitial tissue of the spleen, and the liver is the seat of a typical interstitial hepatitis or cirrhosis.

**No. 501.**

J. R.—White male. Age 46 years. Hospital residence 6 years, 7 months and four days. Diagnosis, epilepsy. Cause of death, convulsion and cerebral hemorrhage. No history of value.

**Autopsy** ten hours after death showed that hemorrhage occurred in the vessels of left Sylvian fissure; and old meningitis, right adhesive pleurisy, general arteriosclerosis, enlarged spleen, nephritis and hypostasis of lungs.

**Microscopical** examination shows infiltrated brain and meninges; nephritis of glomerular type; congested lungs, spleen and liver.

**No. 502.**

D. W.—Colored female. Age 36 years. Hospital residence 3 months and 6 days. Psychosis, manic-depressive. Cause of death, edoema of

brain and chronic interstitial nephritis. Examination at time of admission showed slight arcus senilis, enlarged epitrochlears, exaggerated reflexes, slight Romberg, tremors of tongue and fingers, inflamed pharynx and pellagra as a possible complication.

**Autopsy** seven hours after death showed edoema of brain, flattened and small convolutions, slightly dilated lateral ventricles, atheroma of aorta and aortic valves, old adhesive pleurisy, adherent omentum to pelvic structures around appendix, chronic appendicitis, and multiple fibroids of the uterus.

**Microscopical** examination of brain shows a marked meningoencephalitis with chronic congestion of liver, and a diffuse nephritis of the hemorrhagic type.

**No. 503.**

C. P.—White female. Age 14 years. Hospital residence 10 days. Imbecile. Died before examination and classification had been made. Cause of death, bronchopneumonia, pericarditis and mitral regurgitation.

**Autopsy** nine hours after death showed edoema of pia and milky-white patches scattered throughout. Bronchopneumonia in right lung. Mitral valves contain a number of vegetations and the opening is greatly enlarged.

**Microscopical** examination shows an exudative meningitis of the brain, diffuse nephritis of the glomerular type, congestion of the liver and bronchopneumonia.

**No. 504.**

L. R.—White female. Age 78 years. Hospital residence 4 years, 2 months and 14 days. Senile psychosis. No history of value. Cause of death, edoema of brain and nephritis.

**Autopsy** two hours after death showed chronic meningitis, edoema of pia, atrophy of brain (915 grams) and convolutions, atheroma of cerebral arteries, abscess in left lung and a few pneumonic patches, fatty infiltration and degeneration of heart, general arteriosclerosis, congestion of liver, cholelithiasis and fatty infiltration of kidney with nephritis.

**Microscopical** examination confirms the anatomical findings, and in addition shows arteriosclerotic kidneys and fatty degeneration of liver. Also brown atrophy and fatty degeneration of heart.

**No. 505.**

Z. S.—White female. Age 34 years. Hospital residence 11 years, 10 months and 13 days. Diagnosis, dementia praecox. Admitted once before. Last illness two years' duration. Cause of death, tuberculosis and peritonitis.

**Autopsy** nine hours after death showed some edoema of brain, 1,500 cc. of fluid in abdomen containing whitish flocculent material, omentum

adherent to intestines and mesentery in several places. Right lung weighs 510 grams, lobular markings obliterated, contains many small cavities and two in the apex measuring 2.5 cm. in diameter; 250 cc. of yellowish bloody fluid in this cavity. Left lung weighs 550 grams, shows many calcareous deposits, few cavities; many cheesy tubercles in upper lobe and apex; other portion shows an active inflammation. Kidneys contain abscesses and cysts in the cortex and show interstitial changes. Appendix bound down by adhesions, and shows chronic condition, as well as the cecum. Liver shows fatty degeneration, and spleen is very pale.

**Microscopical** examination confirms the anatomical findings, and in addition shows amyloid degeneration of kidneys.

**No. 506.**

B. F.—Colored female. Age 19 years. Hospital residence 2 months and 15 days. Diagnosis pellagrous insanity (dementia praecox type). Cause of death, pellagra and chronic meningitis. Physical examination at time of admission shows enlarged epitrochlears, dyspnoea and cough, lacerated perineum and vaginitis.

**Autopsy** eleven hours after death shows an adherent dura, slightly edematous pia and cystic choroid plexi. Dura of the spinal chord is slightly congested. Lungs normal. Some thinning of the mitral valves. Liver somewhat congested. Kidneys and other organs are apparently normal.

**No. 507.**

W. S.—Colored female. Age 54 years. Hospital residence 16 years and 7 days. Diagnosis unknown. Cause of death, lobar pneumonia. History of no value.

**Autopsy** four hours after death shows a double lobar pneumonia, more marked in left lung; congested, granular and mottled liver and fibroid cystic uterus. Brain not examined.

**Microscopical** examination shows a diffuse nephritis of glomerular type, and confirms other anatomical lesions.

**No. 508.**

L. T.—Colored female. Age 38 years. Hospital residence 7 months and 17 days. Diagnosis, dementia praecox accompanied by pellagra. History of two previous attacks of mental trouble. Cause of death suppurative pyelonephritis with renal calculi. A lumbar puncture made one month after admission showed twenty-four cells per cb. mm. and a positive butyric acid reaction. Puncture made one month before death showed results under No. 36 in spinal fluid table. Repeated examination showed pus and albuminuria.

**Autopsy** one hour after death shows a brain weighing 1,235 grams, edoema of pia in occipital region and a normal-looking dura without any marked adhesions of same. Pineal gland contains some brain sand.

Pericardium contains about 20 or 30 cc. of fluid. Heart shows some hypertrophy and dilatation and thickening of mitral valves. Aorta decidedly atheromatous. Many old adhesions of right lung around base and posteriorly. Few adhesions around the base of left lung which also shows some bronchopneumonic patches. Left kidney weighs 335 grams, oval in shape, slightly adherent capsule, smooth and irregular cortex. Section of this kidney shows four large and one very small calculi situated in the upper half of organ. One of the larger stones is roughly shaped like the letter T, measuring about 2x3 cm. There are three large cysts in the lower part of kidney, and the entire organ is filled with a whitish milky fluid. All kidney structure is practically destroyed. Right kidney weighs 375 grams; contains one large calculus in upper pole, and is cystic and filled with pus throughout. Liver contains an excess of fat. Uterus enlarged and ovaries cystic. Bladder contains much pus.

**Microscopical** examination of pus from kidneys and bladder shows many colon-like bacilli. No tubercle or acid fast-bacilli found. Brain negative. Ganglion cells in anterior horns of spinal cord show some atrophy and chromatolysis. Liver shows fatty changes. Kidneys show complete destruction of the tissues at many places, thickened capsules with desquamation and degeneration of the glomerular epithelium and marked increase in the interstitial tissue with cellular infiltration and scattering abscesses.

#### No. 509.

S. S.—Colored male. Age 27 years. Hospital residence 9 years and 16 days. Diagnosis, epilepsy. Cause of death, lobar pneumonia. No history of any value.

**Autopsy** twenty hours after death showed a double lobar pneumonia, Complete involvement of both lungs. Some resolution evident on left side, and this lung weighs 620 grams. Right lung weighs 1,130 grams, and shows many pleuritic adhesions. Around the larger bronchi of this lung are several calcareous deposits about the size of a cow-pea. Brain not examined.

#### No. 510.

A. C.—Colored female. Age 36 years. Hospital residence 2 months and 9 days. Diagnosis, pellagrous insanity (infective-exhaustive). Cause of death, pellagra. Fifteen days after admission patient showed marked skin lesions, diarrhoea and some salivation; deep reflexes exaggerated and spastic gait. Lumbar puncture made three days after admission showed forty-two cells per cb. mm. and positive butyric acid reaction. Patient gradually grew worse, showing spasmodic contractions of muscles on left side for three days before death.

**Autopsy** one hour after death shows a brain weighing 1,220 grams, slightly thickend dura, some edoema of the pia and some atheroma at the base, otherwise negative. Heart negative. Lungs negative except a few old adhesions around the apex of left. Spleen and pancreas nega-

tive. Liver shows a grayish yellow cut surface, and contains an excess of fat. Kidneys show thickened cortices and adherent capsules. Mesenteric glands slightly enlarged, and the mucous membranes of colon, caecum and jejunum show many small congested areas, measuring from .5 to 1 cm. in diameter, but no ulcers.

**Microscopical** examination shows negative brain and spinal cord. Kidneys show a marked hemorrhagic nephritis. Liver shows infiltration with fat and increase of interstitial tissue and localized pigmentation. Lungs show some emphysema. Intestines show a typical catarrhal enteritis with decided hyperplasia of mucous membrane.

**No. 511.**

L. S.—White female. Age 66 years. Hospital residence 38 years, 6 months and 9 days. Diagnosis, dementia praecox. Cause of death, cerebral edoema and mitral valvular disease. History of no value.

**Autopsy** six hours after death showed edematous pia, thickened and adherent dura, dilated lateral ventricles and general atheroma of cerebral vessels and a brain weighing 1250 grams. Heart weighs 215 grams and pericardium contains an excess of fluid; mitral valves are thickened and show several small vegetations. Right lung shows hypostasis and left lung shows one small adhesion in apex. Liver congested, and spleen is mottled and soft. Kidneys show adherent capsule and granular cortex.

**Microscopical** examination shows some cellular infiltration of pia and cortex of brain with marked congestion. Brain throughout shows infiltration of the vessels walls, with small round cells and also of the surrounding tissue. Kidneys are arteriosclerotic and show a few small hemorrhages into the tubules. Liver shows decided atrophy of the cells, increase in interstitial tissue and much pigment.

**No. 512.**

E. S.—White female. Age 65 years. Hospital residence 26 years, 5 months and 10 days. Senile psychosis. Cause of death, cerebral hemorrhage. History of no value.

**Autopsy** four hours after death showed atheroma of cerebral vessels. Large irregular clot in posterior portion of right frontal lobe near the beginning of Sylvian fissure which when removed leaves a cavity or area of softening and bloody exudate that occupies fully the lower two-thirds of this lobe. Convolutions are flattened and atrophied with partial obliterations of sulci. Only brain examined. No tissues examined microscopically.

**No. 513.**

H. W.—Colored female. Age 41 years. Total hospital residence 9 years and 3 days. Last admission 6 years, 1 month and 15 days. Psychosis manic-depressive. Cause of death, chronic meningitis and pellagra. No history of value.

**Autopsy** twelve hours after death showed very edematous pia-mater, thickened and adherent dura, flattened convolutions, dense adhesions around the base and a brain weighing 1,050 grams. General arteriosclerosis and a few adhesions of left lung. Otherwise negative.

**Microscopical** examination shows a typical meningo-encephalitis in the brain. Spinal cord shows cellular infiltration of meninges; contains a few corpora amylacea, and the ganglion cells show some chromatolysis and displaced nuclea. Heart shows slight changes resembling brown atrophy. Sections from other organs not examined.

#### No. 514.

M. S.—Colored female. Age 63 years. Hospital residence 1 month and 13 days. Diagnosis, pellagrous insanity. Cause of death, edoema of brain and pellagra. Only brain examined.

**Autopsy** two hours after death showed very adherent dura and edematous pia and a tendency of the latter to decorticate. Atrophy of frontal lobes and flattened convolutions. Brain weighs 1,155 grams; cerebral vessels are atheromatous throughout; choroid plexi are cystic, and there are a few adhesions around the base and frontal lobes.

**Microscopical** examination shows a diffuse exudative meningo-encephalitis, apparently of long duration. Spinal cord contains a few corpora amylacea, and the ganglion cells show irregular staining, and there is cellular infiltration of the meninges of the cord.

#### No. 515.

M. C.—Colored female. Age 45 years. Hospital residence 19 years and 17 days. Diagnosis, imbecility. Cause of death, pericarditis. No history of any value.

**Autopsy** seven hours after death showed a brain weighing 960 grams, with some edoema of pia, flattened convolutions and decortication by the removal of pia with diminished consistency of brain substance and atheroma of the blood vessels. There is an adhesive pericarditis and also dense adhesive pleurisy, both sides (lungs can only be removed in torn parts and pieces). There is abdominal ascites, a diffuse nephritis, fibroid uterus, cirrhosis of liver and a granular mottled spleen.

**Microscopical** examination confirms the anatomical findings, and in addition shows some chronic inflammation in the brain, fatty degeneration of liver and what appear to be a few miliary tubercles in the spleen.

#### No. 516.

M. B.—Colored female. Age 28 years. Hospital residence 2 years, 2 months and 24 days. Psychosis manic-depressive with a history of several years' duration. Cause of death, pellagra. At time of admission patient showed some stigmata, subjective complaints of pain in back of head and defective speech. Otherwise negative. History of an attack of pellagra about one year previous to admission. History of having been infected with *ascaris lumbricoides*. Microscopical examination

of feces at one time showed many ova of *trichocephalus dispar*. Urine negative at first, but a few days before death showed a large amount of albumin and no casts. Lumbar puncture about one year before death revealed a spinal fluid with sixty-four cells per cb. mm. and a positive butyric acid reaction. Nogouchi modification of Wassermann made about one month after lumbar puncture, and was negative. Notes made by ward physician show typical symptoms of pellagra from shortly after admission until time of death. Salvarsan given about three months before death with no apparent benefit.

**Autopsy** five hours after death showed a brain weighing 1,100 grams, cystic choroid plexi, small hemorrhage in right optic thalamus and a marked entero-colitis with numerous small ulcers. Otherwise the body and other organs were entirely negative.

**Microscopical** examination of brain shows some slight cellular infiltration of the meninges and blood vessels of the cortex and much congestion of the latter. Medulla shows some cellular infiltration of vessels and possibly a slight chromatolysis of ganglion cells. Liver shows marked congestion with some interstitial changes and atrophy of cells. Kidneys show a glomerular nephritis. Spleen congested. Intestines show a typical catarrhal enteritis in various stages. The submucosa and muscular layers are much thickened.

#### No. 517.

W. W.—Colored female. Age 44 years. Hospital residence 11 months and 8 days. Diagnosis, dementia praecox. Cause of death, pellagra with edoema of brain and nephritis. About five months after admission showed typical symptoms of pellagra, which continued until death. Stomatitis and diarrhoea were pronounced throughout the disease.

**Autopsy** twenty-four hours after death shows a thick and adherent dura, pachymeningitis-ossificans-interna, edematous pia, small and flattened convolutions and good deal of atheroma at the base. Brain weighs 1,150 grams. Heart shows some atheroma around bases of valves and attached portion of aorta. Kidneys show adherent capsule, granular cortices and increase in interstitial tissue. Liver weighs 800 grams, and is very much congested. Intestines show an enterocolitis but no ulcers.

**Microscopical** examination shows some slight cellular infiltration of the meninges and their blood vessels, and medulla contains a few corpora amylacea, but there is no apparent change in ganglion cells. Lungs show emphysematous condition. Liver shows fatty degeneration and increase in interlobular tissue, simulating an atrophic cirrhosis. Spleen congested. Kidneys are the seat of a chronic diffuse nephritis. Intestines show a catarrhal enteritis typical in character.

#### No. 518.

M. A.—Colored female. Age 40 years. Hospital residence 7 years, 4 months and 23 days. Diagnosis, dementia praecox. Cause of death, pellagra, which was suspected about six months before death. At this

time patient was treated for an infection of *ascaris lumbricoides*. Symptoms of pellagra now became typical and persisted until death. Three months later salivation and stomatitis, with marked skin manifestations.

**Autopsy** sixteen hours after death showed very adherent calvarium, opaque leathery dura, which is very adherent to the pia, some edoema of the latter, small and slightly flattened convolutions and considerable atheroma of the basilar vessels. Brain weighs 1,160 grams. Heart shows some atheroma of valves and attached portion of aorta. Right lung contains some broncho-pneumonic patches and a few adhesions around the apex. Liver shows some hypostatic congestion. Kidneys are congested; otherwise appear normal.

**Microscopical** examinaion shows some signs of a meningo-encephalitis especially in fatty degeneration of ganglion cells of brain and medulla, with slight local infiltrations of meninges and grey matter. Lungs show an interstitial pneumonia. Spleen contains pigment. Liver shows fatty infiltration and congestion. Kidneys show a diffuse nephritis with little involvement of the glomeruli.

**No. 519.**

M. M.—White female. Age 42 years. Hospital residence 21 years, 1 month and 10 days. Unclassified. Cause of death acute fibrinous pleurisy and endocarditis with mitral stenosis.

**Autopsy** four hours after death shows a pericardium containing 60 cc. of fluid, flabby heart, many small punctate hemorrhages right endocardium and stenotic mitral opening with marked atheroma of aorta and aortic valves. Lungs show many recent adhesions throughout pleural cavities. Liver is very much congested. Kidneys show very adherent capsules, granular and thickened cortices and some apparent increase in interstitial tissue; 1,500 cc. of straw-colored fluid removed from the abdomen. Brain not examined.

**Microscopical** examination shows a diffuse nephritis, fatty degeneration and chronic congestion of liver, etc., and evidences of interstitial pneumonia.

**No. 520.**

H. D.—Colored female. Age 65 years. Hospital residence 5 days. Senile psychosis. Cause of death, heart disease.

**Autopsy** thirty hours after death showed hypertrophied heart; leakage through aortic valves and atheroma of same and aorta. Liver has a thick and densely adherent capsule and dilated bile ducts. Capsule tears the liver tissue proper when stripped. There are many old adhesions to liver and surrounding structures. Brain not examined.

**Microscopical** examination shows diminished size of liver cells and an accumulation of pigment in these cells, while others have entirely disappeared and many show fatty degeneration. There is throughout the liver localized areas of cell infiltration and an increase in the interstitial tissue. Kidneys show a glomular nephritis.

141	W	F	J. H.	Paresis . . . . .	26	x	x	—	Alk.	Many lymph. Few plasma.

NOTES: x = positive reaction. — = negative reaction. 0 = number of lymphocytes. Figures = number of lymphocytes per cb. mm. \* Cells not counted.

Under the head of remarks the approximate percentage of lymphocytes and plasma cells are given. Complete percentages would in most cases be made up of unknown cells. Calculation of percentages made from smear of sediment obtained by centrifuging about 10 cc. of fluid. Stained with Wright's stain.

Cerebro-spinal fluid unavoidably at times contains blood, even though not perceptible to the naked eye; this blood may give a false reaction which is misleading and I have in all specimens containing blood indicated accordingly in the table. I have been very careful on this point, and can say absolutely that all specimens reported with increase in globulin or protein contents in the above table that the increase is not due to blood contamination, unless the presence of the latter is indicated by a plus sign under "blood cells." Besides I have by actual examination found that as many as 100 red cells per cb. mm. in normal fluid causes only a light ppt. of a dirty gray color, by the butyric acid test, which does not resemble the heavy positive ppt. obtained in paresis, tabes and many cases of pellagra. Furthermore the globulin or butyric acid reaction is obtained from that portion of the fluid which is afterwards centrifugalized and examined by smear, showing conclusively the absence or presence of red cells. Red cells in the counting chamber should never be mistaken for lymphocytes or other cells as they do not take the stain easily. The Fuch's Rosenthal stain, which is commonly used for counting chamber work, contains acetic acid enough to dissolve the red cells, consequently only a freshly prepared solution of methyal violet in water alone should be used in the absence of smear examinations.

Cases numbers 74, 92, 93, 94, 98 and 135 all gave a decidedly heavy globulin ppt., but none of them contained over five cells per cb. mm. Numbers 74 and 93 showed no cells. No. 98 was from a case of chronic alcoholism; the others were all from pellagrins. The above cases gave much heavier precipitates than you see in ordinary cases of paresis or tabes.

The following notes are given on those cases that were tested by the Wassermann Nogouchi reaction:

No. 35. Punctured November 17, 1911, in addition to the above showed twenty-two cells per cb. mm. and positive butyric acid reaction. Nogouchi-Wassermann January 12, 1912, negative. Second lumbar puncture made April 9, 1912, as reported by No. 35. This was a typical case of pellagra, which on September 6, 1912, had cleared up considerably but manifested signs of pulmonary tuberculosis. The tubercular condition if present may have had some bearing on the in-

crease in cells of the cerebro-spinal fluid found at time of first lumbar puncture, although fifteen days after this puncture the salivation, skin manifestations and diarrhoea were pronounced.

No. 36. Punctured April 9, 1912, died May 2, 1912. See Autopsy No. 508.

No. 83. Admitted April 19, 1912, lumbar puncture made August 9, 1912, as reported above. Nogouchi-Wassermann negative August 29, 1912. Diagnosis pellagra and dementia praecox with history of first attack July, 1910.

No. 93. Admitted with pellagra a few months before lumbar puncture. At time of puncture apparently improving. Blood serum gave a positive Nogouchi-Wassermann eight days after puncture.

No. 93. At time of puncture patient in a negative state and apparently no chance for recovery. Much pigment in sediment from fluid which gave a negative test for haematin. Negative Nogouchi-Wassermann of blood serum eight days after puncture.

No. 94. Severe wet form of the disease. Emaciation and salivation marked. Diarrhoea has been active. As already mentioned the butyric acid reaction or globulin ppt. was exceedingly heavy. Smear from sediment showed much granular material or pigment and many degenerated cells. Negative Nogouchi-Wassermann of blood serum eight days after puncture.

No. 107. Smear shows many large mono-nuclears indicating a tubercular process as the cause of high cell count. Negative Nogouchi-Wassermann one month after puncture.

Attention is called to Autopsies 487, 508, 510 and 516 with reports on spinal fluid findings.

It will be observed that there seems to be no constant increase of cells in the fluids of the pellagrins here reported, but there does seem to be nearly always an increase of globulin or positive butyric acid reaction in the latter stages or severe cases of the disease. In the absence of autopsy findings and the Wassermann tests on many of the cases no conclusions can be made. Two cases that came to autopsy showed a paretic process, thereby eliminating pellagra as the cause of changes in the cerebro-spinal fluid.

In the J. A. M. A., 5-18-12, pp. 1547, there is an abstract from the Presse Medicale, in which Boveri says he found the cerebro-spinal fluid (of pellagrins) always limpid but occasionally under high pressure, with an increase in the albumin and slight lymphocytosis, but the fluid was always sterile.

The Illinois Pellagra Commission (Archives Int. Med. Vol. 10, Nos. 2 and 3) reported that the cerebro-spinal fluid of pellagrins was negative, but no details are given, and apparently the number of cases examined do not justify a negative report.

In concluding this report I desire to express my appreciation for the uniform kindness shown me by you and all the members of the Staff during the year. I should also mention that Asst. Surgeon R. M. Grimm, U. S. P. H. Service spent a few days in the Laboratory during August, and while here offered many suggestions that were greatly appreciated.

Very respectfully,

S. S. HINDMAN,

Pathologist.

## Report of Treasurer.

Milledgeville, Ga., January 2, 1913.

Dr. L. M. Jones, Superintendent,  
Georgia State Sanitarium.

Dear Sir:—I beg to enclose herewith a statement of my receipts and disbursements of my office for the fiscal year ending December 31, 1912:

### Receipts.

Jan. 3, 1912—	
Balance on hand .....	\$ 22,679.79
Dec. 31, 1912—	
Received from the State Treasurer.....	530,000.00
Received from L. J. Lamar, Steward.....	15,752.38
	<hr/>
	\$568,432.17

### Disbursements.

Dec. 31, 1912—	
Total disbursements for 1912.....	\$538,170.16
	<hr/>
Jan. 2, 1913—	
Balance on hand .....	\$ 30,262.01

I attach hereto certificate of the Merchants & Farmers Bank which is made a part of my report.

Respectfully submitted,

L. H. ANDREWS,  
Treasurer.

Milledgeville, Ga., January 2, 1913.

This is to certify that the balance to the credit of L. H. Andrews, Treasurer of the Georgia State Sanitarium, and subject to his check at the close of business this day is Thirty Thousand Two Hundred Sixty-two & 01/100 (\$30,262.01) dollars.

(Signed) JNO. T. DAY,  
Assistant Cashier.

(Attest) GUY UNDERWOOD,  
N. P. B. Co. Ga.

## Report of Steward.

Milledgeville, Ga., December 31, 1912.

Dr. L. M. Jones, Superintendent,

Georgia State Sanitarium.

Dear Sir:—Permit me to transmit through you to our Honorable Board of Trustees, this my report as Steward, for the fiscal year ended December 31, 1912:

“Exhibit A”—Statement of Resources and Liabilities, at December 31, 1912.

“Schedule 1”—Accounts Receivable.

“Schedule 2”—Accounts Payable.

“Schedule 3”—Outstanding Vouchers.

“Exhibit B”—Statement of Institution Income, and the Consumption of Purchased Supplies, also Farm, Garden and Dairy Products During 1912.

“Exhibit C”—Statement of surplus as of December 31, 1911, with Adjustments During 1912.

“Exhibit D”—Statement Per Capita, Average Number Patients, Total Amount Cash Disbursed, and Average Monthly and Daily Disbursements for the Year.

“Exhibit E”—Statement, Amount of Money Expended During 1912, and Total Amount Paid Each Creditor of Institution During the Year.

In compliance with the law, duplicate voucher-checks, with duplicate invoices attached, covering all paid purchases during the year, also the required monthly certificate of expenditure, approved by yourself, and audited by the Board of Trustees, have been filed in the Executive Department.

I have devoted my entire time as required by the rules, to the Steward's work, and have to the best of my ability discharged the duties incumbent upon me.

Respectfully submitted,

L. J. LAMAR,

Steward.

March 26th, 1913.

## Report of Storekeeper.

Mr. L. J. Lamar, Steward.

Dear Sir:—You will find below statement of receipts and issues from January 1, 1912, to January 1, 1913.

Yours truly,

W. H. HUNTER, S. K.

To stock on hand January 1, 1912.....	\$ 13,636.75
To Mdse. from January 1, 1912, to January 1, 1913.....	246,781.62

## Report of Engineer.

Milledgeville, Ga., January 1, 1913.

Dr. L. M. Jones, Superintendent,

Dear Sir:—Please find below the annual report of the Engineer's Department for the year ending December 31, 1912.

Respectfully,

T. H. DeSAUSSURE,

Engineer.

### Improvements.

The gas engine and pump mentioned in the annual report of 1911 as having been put in at the Colony to pump spring water up to the buildings did not come up to the guarantee under which they were bought and they were rejected after a tryout. A new engine and pump has been furnished by the contractor and placed in commission. This new outfit is working satisfactorily and is a decided improvement over the first set.

A new boiler room and kitchen has been built at the Negro Building, the boiler room being 42x43 feet and the kitchen 50x62 feet. This gives 1,800 square feet more floor surface in the new kitchen than there was in the old one. This increase in size has been made necessary by the additional number of patients being served from this kitchen, and also by the need of a store-room and other small rooms.

All of the steam cooking apparatus except one cast iron steam jacketed kettle and one copper steam jacketed coffee urn has been replaced with new apparatus and three steam roasters and four vegetable steamers have been added to the equipment. There has also been built in this kitchen a Petersen continuous baking oven having a baking floor space of ten by twelve feet. The insurance underwriters having condemned the three steam boilers used for heating the buildings, cooking, and for laundry purposes, it was found necessary to replace them. The new boilers are of the horizontal return tubular type, 60 inches by 16 feet, and are set with suspended settings, two in one battery and the third by itself, with provision for

a fourth boiler in the future. A brick chimney one hundred feet high, having a four-foot flue was built just outside the boiler room and the boilers connected to it with a sheet steel smoke flue. A new water heating apparatus has been installed in that part of the old boiler room in which were the two heating boilers. This apparatus consists of two 24 in. x 96 in. Berryman water heaters laid horizontally in cradles under two 48 in. x 96 in. pressure tanks to which they are connected by 3 in. circulating pipes. The temperature of the water is kept constant by an automatic thermostat which cuts off the steam supply when the water reaches a prearranged degree of heat. A bath and toilet room has been made in both the kitchen and in the boiler room for the convenience of the operatives.

The operating room in the T. O. Powell building has been enlarged and improved, two rooms having been added to it, one 10x12 feet, in which all of the sterilizing apparatus has been placed, and another 8x12 feet, fitted with sinks and lavatories and which is devoted entirely to the use of the surgeons in making ready. The floor of the operating room, when first made, was of wood, covered with a patented monolithic cement coating. This floor had become defective and it has been replaced with one of reinforced concrete, having a top surface of 2 in. white hexagon aseptic tile. This kind of floor was also laid in both the sterilizing room and in the wash room. A wainscot 6 feet high of white enameled brick has been placed around the side walls of the three rooms.

Two pavilions for tubercular patients have been built during the year; one of them, for white females, with a capacity of 36 beds, the other for white males, with accommodation for 26 patients. In each building there are dining rooms, diet kitchens, sink rooms, bath rooms, toilet rooms and nurses rooms. The buildings are of a permanent character. The wood work is painted white on the outside and everything finished in white enamel on the inside. The female building has two large piazzas running the length of each wing on the front, into which the beds may be rolled if desired. Both buildings, including the piazzas are screened.

A continuous bath having a marble controller table with the necessary valves and thermometer has been placed in one of the rooms on the 2d white female ward. This bath is supplied

with hot water from a special and separate water heater which has a thermostat for keeping the water at a prearranged temperature. This water heater has a capacity for two baths should it be desired to put in a second one later.

Two six-room cottages have been recovered during the year; shingles being used.

The windows and doors of both the girls' ward in the east detached building, and the boys' ward in the Cabaniss building have been screened.

The ice machine has been thoroughly overhauled, the more extensive repairs being three new pipe coils in the condenser tank and two in the poor liquor cooler.

A five-room cottage with bath room and pantry has been built on the grounds.

Besides the ordinary repair work of the institution the following articles have been made and repaired in the several shops.

### Carpenter Shop.

10 Hominy Paddles.	9 Platforms to Chicken Coops.
12 Commodes.	2 Cart Bodies.

## Report of Farm Steward.

Near Milledgeville, Ga., January 1, 1913.

Dr. L. M. Jones, Superintendent.

Dear Sir:—I herewith hand you my report as Farm Steward for the year 1912, of the Farm, Garden and Dairy. We have lost from cholera 95 head of hogs; also 12 cows and 1 bull, from various and unknown causes. Have received from the chicken yards and turned over to the various wards for the sick 3,309 dozen eggs. At market price would amount to \$661.80; 226 pounds of turkeys @ 15c, \$33.90, and 38 geese @ 50s, \$19.00.

Very respectfully,

GEO. W. HOLLINSHEAD,

Farm Steward.

## Report of Chaplain.

Milledgeville, Ga., January 1, 1913.

Having occupied the position of Chaplain for the year 1911-12, I have the honor to submit my report:

During this period of twelve months I did the service pertaining to this office, namely, preaching and holding devotional service each Sunday; conducting funeral services when called, and acting as Chaplain for the Board of Trustees.

The management, in both superior officers and subordinates, at all times and in every way, manifested a truly praiseworthy attitude toward this very important work of the State for the comfort of its unhappy wards.

I can not too strongly commend this feature in the conduct of "Georgia's Greatest Charity." My experience has convinced me that in very many cases the scripture reading, the preaching, the prayers, the songs, do for the insane the same ministry of comfort and inspiration that they serve for the sane.

Respectfully submitted,

ELAM F. DEMPSEY,

Pastor First Methodist Church, Milledgeville, Ga.
